Aluminum Recycling K-2 Grade

Hi there, I'm Aluminum Can Guy. Did you know that aluminum is able to be recycled over and over again?

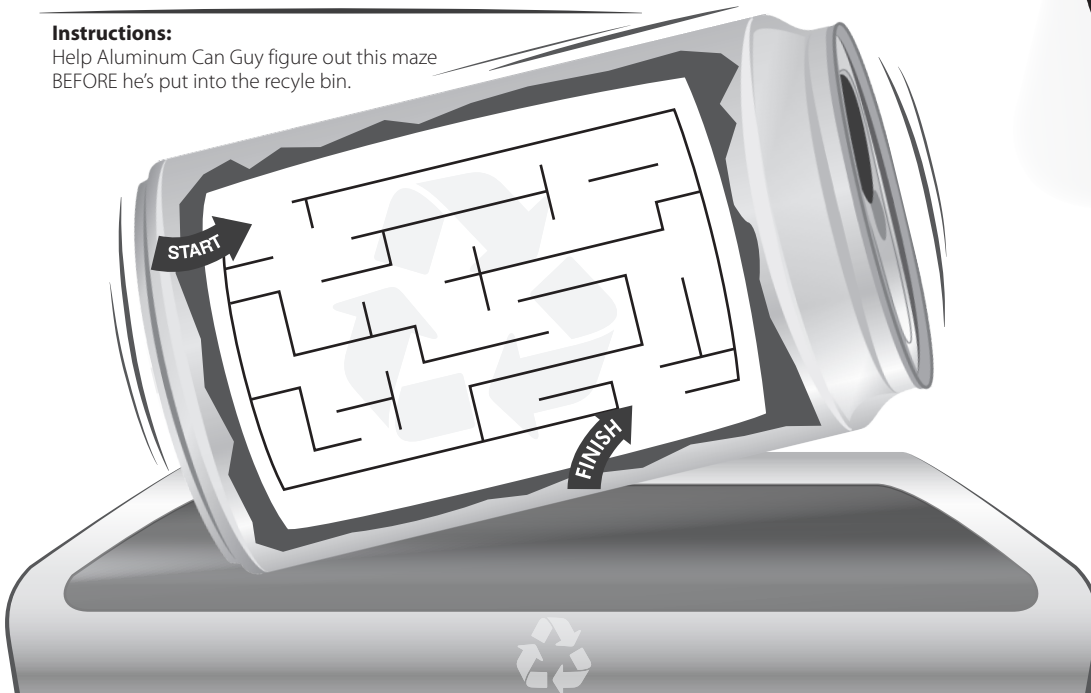

There is no limit on the number of times I can be recycled! Aluminum may be used to make all kinds of things, such as beverage cans, pots and pans, computers, airplanes, bicycles, aluminum foil, baseball bats, and even buildings.

Aluminum cans are the most recycled beverage container in the world. When you recycle an aluminum can it could be back in the store in less than 60 days.

Now that's recycling done fast!

Instructions:

Help Aluminum Can Guy figure out this maze BEFORE he's put into the recycle bin.
