

**SUMMARY COMMENTS**

**Harrison Crawford State Forest**      **Compartment 21 Tract 2**      **30 Day Comment Period Ending: 12/19/2016**      **Comments Received: 2**

The table below is a summary of public comments received concerning the draft Resource Management Guide (DRMG). The public comments received have been reviewed in their entirety and given due consideration summarized in the Division of Forestry response below.

Comment Summary	Division of Forestry Response
<ul style="list-style-type: none"> <li>• Concern of potential impact to interior species, Indiana and Northern long eared bat and other RTE species. Recommends detailed environmental inventory of birds, wildlife and plants be conducted/included in DRMG. Concern on reliability of the NHDB</li> <li>• Suggests area be evaluates for potential High Conservation Value or old forest designation.</li> <li>• Suggests DRMG evaluate habitat composition on the surrounding landscape and consider possible set aside of tract for long rotation management (100+ years) values.</li> <li>• Supports the retention of snags and other habitat features and would like to see more related information included I the DRMG.</li> <li>• Recommends following US Fish &amp; Wildlife Service habitat guidelines (canopy cover, snags, etc) to prevent take of the Indiana bats. Suggests additional measures.</li> <li>• Suggests DoF focus management on interior forest habitats.</li> <li>• Concern on impacts to soil and water resources and effective implementation and monitoring of BMPs. Suggests riparian areas be avoided or buffered during harvests</li> <li>• Concerns about long term forest stainability and harvest levels on State Forests.</li> <li>• Concern potential spread of invasive species as result of management activity.</li> <li>• Concern DRMG does not address impacts on climate change and carbon sequestration. Suggests DoF put in place evaluation standards to consider the cumulative impacts of all state and federal forest</li> </ul>	<ul style="list-style-type: none"> <li>• Habitats, communities and species are considered as part of the management planning process. Along with field observations, Natural heritage data has been reviewed to check for threatened or endangered bird and wildlife species on or near the management unit. No HCVF or old growth forests were noted on this tract.</li> <li>• Detailed flora, fauna and landscape level habitat inventories are beyond the scope of tract level management guides.</li> <li>• Implementation of the DRMG will utilize guidance from the US Fish and Wildlife Service and other sources to avoid take impacts to the Indiana bat and other listed species.</li> <li>• Snags and legacy trees are considered not only at the tract level but also at the compartment level. Adequate numbers are supported at the compartment level.</li> <li>• Landscape and fauna diversity is the goal of the DRMG. As such, many more wildlife species will benefit from management. Through the HEE research effort, we are monitoring the impacts on wildlife species.</li> <li>• Further information on direct and indirect impacts on species and habitats are found in the Indiana State Forest Environmental Assessment. <a href="http://www.in.gov/dnr/forestry/files/fo-StateForests_EA.pdf">http://www.in.gov/dnr/forestry/files/fo-StateForests_EA.pdf</a></li> <li>• Best management practices will be implemented and monitored to address the soil erosion and sedimentation concerns including buffers. BMPs will be required of operator and included in timber</li> </ul>

Indiana Department of Natural Resources  
Division of Forestry  
State Forest Resource Management Guide Public Comment Summary

management projects across the state on climate change and include evaluation results in the DRMG.

- Opposes the harvest prescription within the DRMG due to potential impacts to plants, animals, habitat, aesthetics, recreation and ecological services.

sales contracts. DoF will respond to reported BMP departures. BMP guidance can be found at:

[http://www.in.gov/dnr/forestry/files/fo-2005\\_Forestry\\_BMP\\_Field\\_Guide.pdf](http://www.in.gov/dnr/forestry/files/fo-2005_Forestry_BMP_Field_Guide.pdf)

- Indiana State Forests contain approximately 1.15 billion board feet of timber. Managed harvest levels on State Forests are set at a level to insure long term sustainability. These levels are periodically reviewed as new inventory data is collected. See [http://www.in.gov/dnr/forestry/files/fo-State\\_Forest\\_CFI\\_Report\\_2010\\_2014.pdf](http://www.in.gov/dnr/forestry/files/fo-State_Forest_CFI_Report_2010_2014.pdf)
- Invasive species presence and control needs will be monitored as part of normal operations. A variety of management measures are considered in an overall integrated pest control strategy, including manual controls, defensive plantings and treatments with approved herbicides. Strictly manual measures are seldom effective control strategies by themselves.
- The Division has long supported and implemented the multiple use concept. With multiple uses can come user conflicts. For public safety, trail closure is necessary during resource management operations. This is a temporary closure and the site will be reopened upon completion.
- Assessing climate change and carbon sequestration is beyond the scope of tract level RMGs.
- The prescribed management activities are consistent with silvicultural principles, promotes habitat diversity and supported by inventory data and field assessments. The concerns expressed have been considered and may be further addressed during plan implementation.
