

**Resource Management Guides
Harrison-Crawford State Forest
30-day Public Comment Period (December 5 – January 3, 2022)**

The Indiana State Forest system consists of approximately 160, 251 acres of primarily forested land. These lands are managed under the principle of multiple use-multiple benefit to provide forest conservation, goods, and services for current and future generations. The management is guided by scientific principles, guiding legislation and comprehensive forest certification standards which are independently audited to help insure long term forest health, resiliency, and sustainability.

For management and planning purposes each State Forest is divided into a system of compartments and tracts. In general terms compartments are 300-1,000 acres in size and their subunits (tracts) are 10 - 300 acres in size. Resource Management Guides (RMGs) are then developed for each tract to guide their management through a 15-25 year management period. There are 1,590 tracts in the State Forest system. During annual planning efforts 50-100 tracts are reviewed and RMGs developed based on current conditions, inventories and assessments.

The Harrison-Crawford State Forest RMG listed below was previously posted for a 30-day public comment period. Because 5 or more years has elapsed since the last comment period with no prescribed management activities initiated, the original RMG is being reposted for public comment. The tract has been reviewed and any amendments to the original RMG addressed below.

Compartment 31 Tract 4

To submit a comment on this document, go to:

Compartment 31 Tract 4 (Amendment)

Identified as 6343104 https://www.in.gov/dnr/forestry/files/compmaps/fo-HC_CT_Boundaries.pdf

Despite the loss of ash in the overstory due to emerald ash borer, no amendment to the silvicultural prescription was warranted.

The net gain from overall growth is estimated to add an additional 15-20% removal volume to the original projected harvest volume.

A follow-up review of the Natural Heritage Database was conducted.
