

SUMMARY COMMENTS

Jackson-Washington State Forest Comp 13 Tract 2

30 Day Comment Period Ending: 10/15/2022

Comments Received: 6

The table below is a summary of public comments received concerning the draft Resource Management Guide. The public comments received have been reviewed in their entirety and given due consideration summarized in the Division of Forestry response below.

Comment Summary	Division of Forestry Response
<ul style="list-style-type: none"> • General comments opposing logging citing concerns of potential impacts to wildlife, recreation, and climate. • Comment suggesting, we are selling tracts of land. • Comment supporting the silvicultural prescriptions, invasive species treatments, and concern with overstocking, supporting the need for management to improve health and resilience of forest. • Concerns with management on steep slopes citing water quality concerns, specifically Elk Creek. • Concern for Threatened and endangered species such as the Indiana bat and pygmy shrew. • Concern with too much timber harvesting. • Concern about these meetings not being held on weekends. • Concern with impacts to the Knobstone Trail. 	<ul style="list-style-type: none"> • The Division of Forestry has actively managed its lands for nearly 120 years using a multiple uses multiple benefits approach. These benefits include timber production, biodiversity, watershed protection, recreation, wildlife habitat, and research areas. Recreational benefits include over 430 miles of designated recreational trails (e.g., horse, bike, hike and interpretive), nearly 1,000 campsites, rent-a-camp cabins, family cabins, dispersed camping, swimming beaches, hunting, fishing, picnicking, mushrooming and many other opportunities under this management philosophy. • Recent CFI data (2021) indicates Indiana State Forests contain approximately 61.3 million live trees, 1 billion board feet (Doyle) of sawlog volume with an estimated annual growth of 22.1 million board feet. Managed harvest levels are set at a level to insure long term sustainability. These levels are periodically reviewed as new Continuous Forest Inventory (CFI) data is collected. See https://www.in.gov/dnr/forestry/files/fo-Continuous-Forest-Inventory-Property-Report-2015-2019.pdf (Note: 2021 report soon to be available online) • The Division of Forestry actively manages its lands for multiple use multiple benefits. A part of that management is timber production. Annually, the division plans, schedules, and

	<p>implements forest management activities across state forests. Activities may include forest inventories, timber harvests, timber stand improvement (TSI), tree plantings, invasive species control, and prescribed fire. These activities help sustain the diverse hardwood landscape and ensure state forests remain vigorous and healthy supporting the multiple uses multiple benefits philosophy for future generations in perpetuity.</p> <ul style="list-style-type: none">• The prescribed management activities are consistent with silvicultural principles, promotes habitat diversity and supported by inventory data and field assessments. The concerns expressed have been considered and may be further addressed during plan implementation. See http://www.in.gov/dnr/forestry/files/fo-StateForests_EA.pdf.• The Division of Forestry does consider recreational impacts during the planning and execution of management activities. The Knobstone Trail is located along the eastern boundary of tract 2. Trail disruptions may occur but will be limited to avoid closure or rerouting of the trail.• Forest management activities ensure forests remain healthy, vigorous, diverse, and adequately stocked. Overstocking and largely over mature conditions jeopardize forest health, resiliency and resistance making them more vulnerable to mortality and disease and insect outbreaks.• Local market conditions are part of the timber bidding process. Pricing and market condition reports are reviewed regularly.• State Forest management is guided by science and implementation of sound silvicultural principles. They adhere to legal mandates and voluntary compliance to a comprehensive set of forest certification standards to insure long term forest
--	---

	<p>sustainability. State Forests are subject to annual ‘third party’ audits for compliance to these standards. https://www.in.gov/dnr/forestry/7532.htm</p> <ul style="list-style-type: none">• Assessing climate change and carbon sequestration is beyond the scope of tract level resource management guides. See https://www.in.gov/dnr/forestry/files/fw-carbon_assessment.pdf• Hardwood Ecosystem Experiment (HEE) and other research continue to document forest impacts and indicate increased biodiversity in managed forests. http://www.heeforeststudy.org/• Detailed flora and fauna inventories are beyond the scope of tract level management guides. Habitats, communities, and species are considered as part of the management planning process. Along with field observations, Natural Heritage Data is reviewed for threatened or endangered species on or near the management unit. <i>Please note, for the protection of sensitive flora and fauna NHD review results are not disclosed in draft RMGs.</i> Further information on direct and indirect impacts on species and habitats are found in the Indiana State Forest Environmental Assessment. http://www.in.gov/dnr/forestry/files/fo-StateForests_EA.pdf• Invasive species presence and control needs are monitored as part of the property’s normal operations. Treatments may be pre- or post-harvest and situational ranging from minor to aggressive based on the presence of the species within the county. Methods may include manual, chemical or use of prescribed fire. Only approved herbicides will be used following forest certification standards.• Best management practices (BMP) will be implemented and monitored to address the soil erosion and sedimentation concerns. BMPs are required and included in each timber sale
--	--

	<p>contract on state forests. Division of Forestry will respond to reported BMP departures. BMP guidance can be found at: http://www.in.gov/dnr/forestry/files/fo-2005_Forestry_BMP_Field_Guide.pdf</p> <ul style="list-style-type: none">• BMPs are guidelines, not law. However, contractual stipulations require BMPs to be implemented and followed on all DNR State Forest land. State Forest staff perform regular site visits during active operations and evaluate as part of their post-harvest review. Additionally, BMP monitoring is performed on each harvest for application and effectiveness. There are 58 individual BMPs measured across 5 categories: access/haul road, log yards, skid trails, stream crossings, and riparian management zones. View reports at: https://www.in.gov/dnr/forestry/files/fo-BMP-report1996-2021.pdf• Implementation of the draft RMG will utilize guidance from the US Fish & Wildlife Service and other sources to avoid take impacts to the Indiana bat and other listed species.• Posting of resource management guides (RMGs) for public comment is an online process. However, the Division of Forest does offer other public input sessions such as annual in person open house events. These events are scheduled during evening hours at various state forests across the state.• The Division of Forestry is not selling public land. Only trees selected for removal as part of the silvicultural prescriptions are sold (i.e., timber sale). This is a part of the entire process to ensure our state forests remain healthy, vigorous, and diverse across the landscape.
