

**Indiana Department of Natural Resources - Division of Forestry**  
**Resource Management Guide Amendment**  
**Compartment 14 Tract 25**  
**Yellowwood State Forest**  
Forester: Amy Spalding  
February 8, 2011

Upon completing the timber marking in 6421425 the actual harvest volumes were significantly lower than the projected estimates from the inventory. The inventory suggests that a harvest of 327 MBF (roughly 40% of standing volume) is possible. A harvest inventory of 40% of volume is indicative of a need for larger regeneration openings. Although some areas were marked for regeneration, it was determined that this specific tract was not in need of larger regeneration openings of 5+ acres during this cutting cycle. Harvest estimates are compiled from systematic random inventory points across the tract. It is likely that although the points did reflect stand types and characteristics, they were unrepresentative of the average overall tract and harvest volumes.
