

# Office of the Indiana Chief Data Officer

## State of Indiana Privacy Impact Assessment (PIA)

a NIST-based framework

### The PIA

A methodological approach for assessing the privacy aspects of an information system that processes personal information.

In practice, it is simply a questionnaire used to collect basic context about an information system; the context is then applied to a set of standards and a risk score is generated.

### The Goal

#### Confidence and Trust

The PIA allows data owners to enjoy the benefits of data sharing and to leverage innovative technologies with greater confidence and trust. You walk away with an actionable and prioritized list of privacy risks for mitigation in your future development sprints.

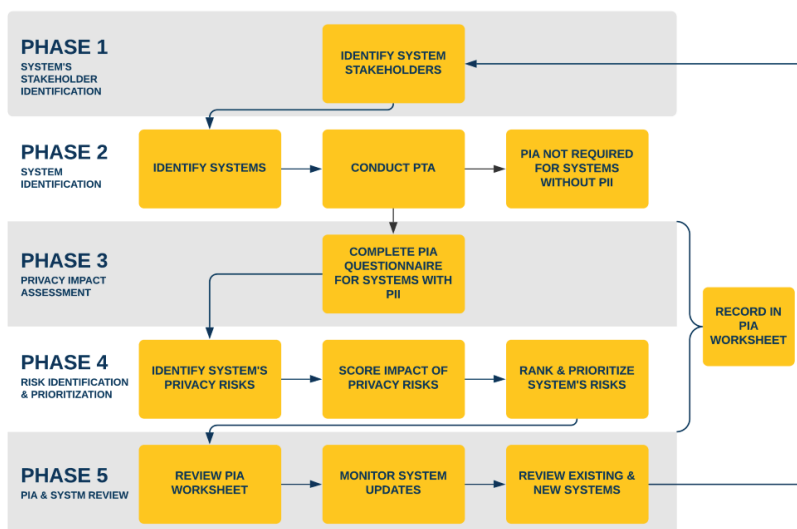

#### Compliance

The PIA provides a framework to ease compliance and ensure all state agencies with Personal Information Systems conduct the privacy compliance exercise using industry-leading standards. The benefit is the ability to act on that assessment to mitigate privacy risks for Hoosiers.

### The Process

The State Chief Privacy Officer is available to support agencies throughout the process.
