

2019 Spring Corn Residue Not Tilled

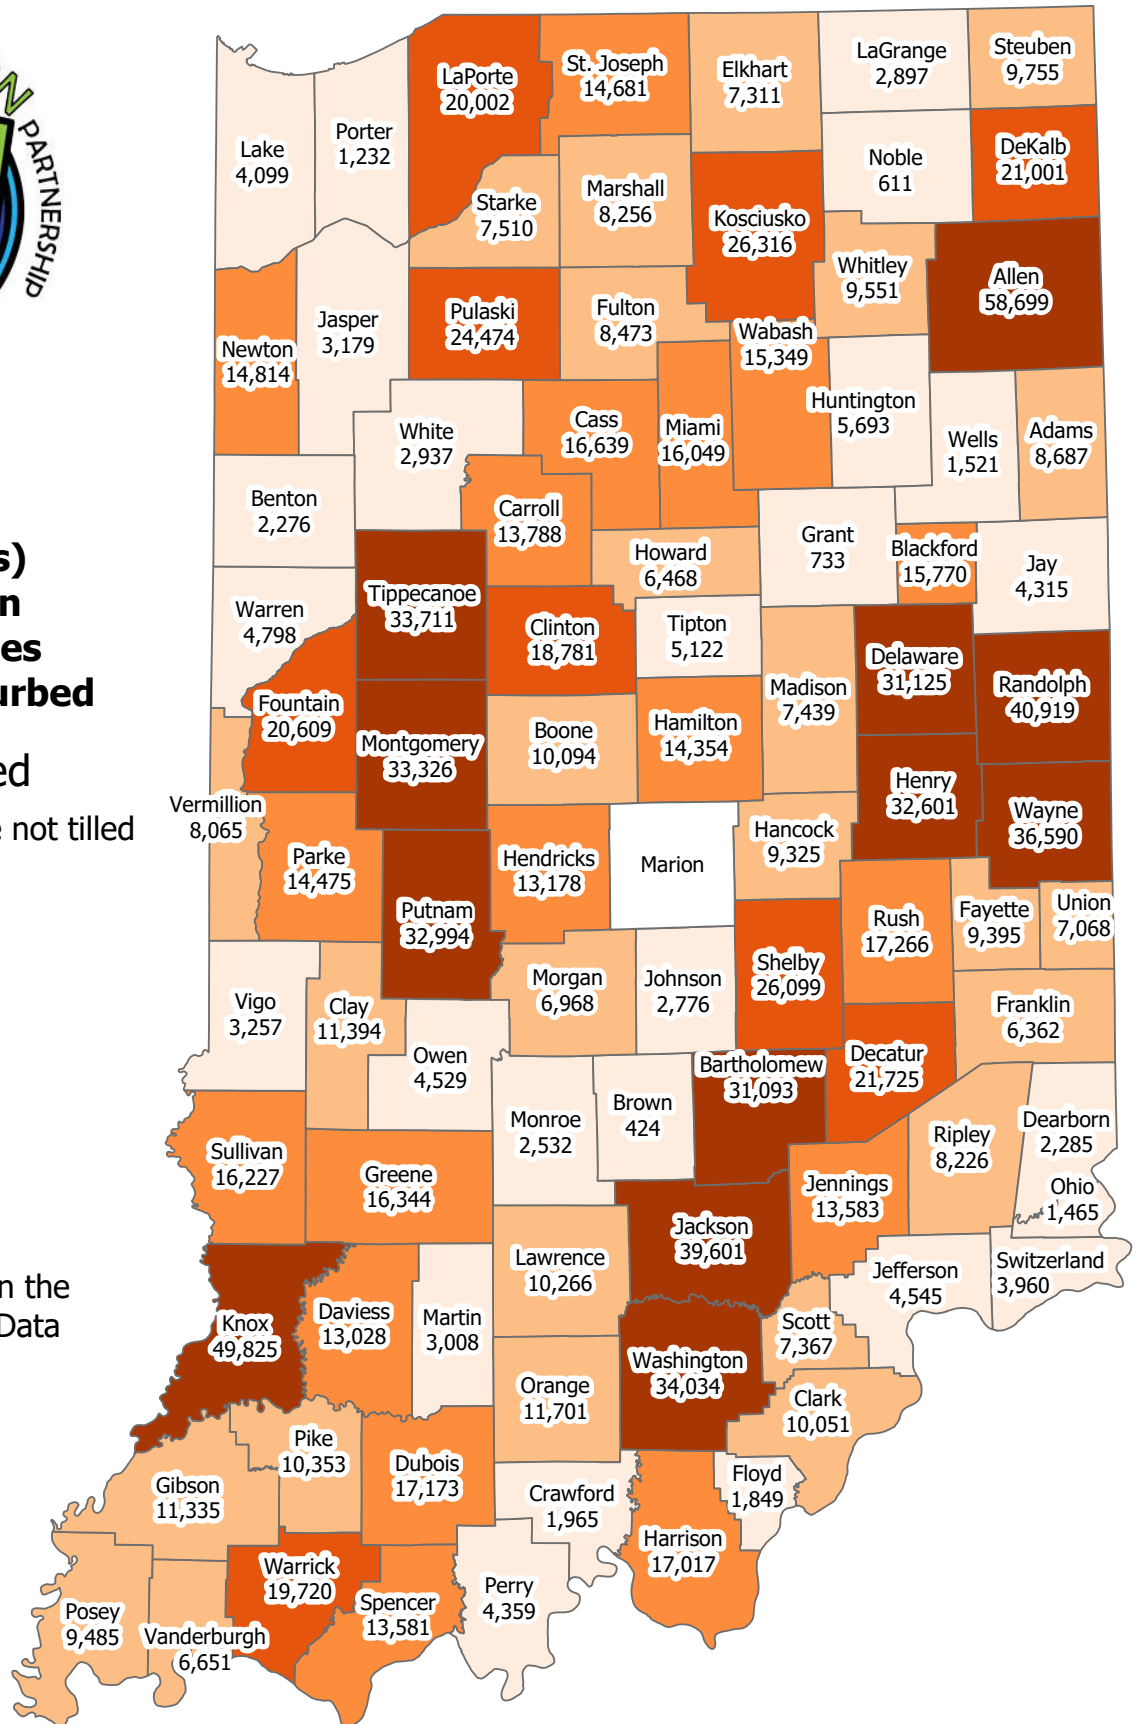

**Statewide, 23%
(1,230,000 acres)
of harvested corn
acres had residues
and soils undisturbed**

Residue not tilled

acres of corn residue not tilled

Acres are based on the 2018 NASS Cropland Data Layer.

*Windshield surveys were conducted between March 2019 and June 2019, and therefore do not reflect residues that are disturbed outside of said timeframe. See FALL cover crop and tillage transect results at <https://www.in.gov/isda/2383.htm>
