The Department of Natural Resources is providing this report to satisfy the requirements of the "Procedures Concerning Certain Licenses Act", IC 14-11-4, and its associated administrative rule, 312 IAC 2-3. The application files are available for public inspection at the Division of Water's office in Indianapolis. Please contact the Division's Technical Services Section at (317) 232-4160 or the toll free number 1-877-928-3755 to make an appointment for file review. Photocopies may be made for a nominal charge of \$0.10 per 8 1/2 " X 11" copy.

A pre-action public hearing on an application may be requested by filing a written petition with the Director, Division of Water:

Director
Division of Water
Room W264
402 West Washington Street
Indianapolis, Indiana 46204

For a petition to be considered valid it must:

- 1. Contain the typed or legibly printed name and complete mailing address of each petitioner;
- 2. Be signed by a minimum of 25 individuals who are at least 18 years old and either reside in the county where the project will take place or own real property within 1 mile of the project site;
- 3. Affirm that each signatory to the petition satisfies the requirements of item 2; and
- 4. Identify the application for which the public hearing is being requested either by the application # or the applicant's name and the project description.

A petition which does not meet these requirements will be considered invalid and the hearing request will not be granted.

A person may request that the Department provide written notice of its action on an application by filing a written request with:

Division of Water Room W264 402 West Washington Street Indianapolis, Indiana 46204

The request must identify the application by either the application # or the applicant's name and the project description.

Application # : FW-29871

Stream : St. Joseph River

Applicant : City of Fort Wayne Utilities

Anne Marie Smrchek, PE

200 East Berry Street, Suite 250

Fort Wayne, IN 46802

Description : Approximately 1,240' of 12" and 14" diameter HDPE force main will be installed,

with approximately 275' installed in the floodway of the St. Joseph River. The proposed force main will be installed by Horizontal Directional Drill method. The existing ground cover elevation and top of the pipe will be a minimum of 5' at the boring pits and 15.33' at the streambed. The bore pits will be restored to the pre-disturbance ground contours following construction. Details of the project are contained in information and plans received at the Division of Water on March 25,

2019 and May 15, 2019.

Location : Approximately 3200' upstream of the Mayhem Road crossing

near Fort Wayne, St. Joseph Township, Allen County

RASR010 1 05/15/2019 10:16 AM

Application # : FW-29875

Stream : Little Deer Creek

Applicant : John Cotner

10412 West 500 North Kokomo, IN 46901

Description : Approximately 75' of stream bank and earthen pond dam will be stabilized with

riprap over geotextile fabric. Riprap will vary in thickness from 1' to 2'. The rip rap will be keyed into the streambank and will conform to the existing bank at the project limits. It will have a maximum height of 5', a maximum streamward projection of 3' beyond the existing bank with side slopes varying from 2:1 to 3:1.

Also, a 5" trickle tube will be installed to maintain water level of the pond.

Additionally, an area that has been compromise by burrowing animals and tree roots will be excavated and filled with impervious compacted fill. Five (5) trees will

be removed during the construction. Details of the project are contained in information and plans received at the Division of Water on March 27, 2019.

Location : South bank of Little Deer Creek

near Kokomo, Ervin Township, Howard County Section 5, T 24N, R 2E, Young America Quadrangle

Statute/Rule : Flood Control Act, IC 14-28-1, with the associated Flood Hazard Area Rule, 312

Application # : FW-29942

Stream : William Lehr Ditch

Applicant : City of Noblesville Street Department

Jim Hellmann

16 South 10th Street, Suite 155 Noblesville, IN 46060-2809

Description : The existing 14' x 7.5' x 30' three sided culvert carrying Greenfield Avenue over

William Lehr Ditch will be replaced with a new culvert system. The new crossing will consist of a 14' x 9' x 100' long reinforced concrete box culvert set in 2

headwalls. The new culvert will have upstream and downstream invert elevations of 796.87', NGVD and 796', NGVD respectively. The inlet end of the culvert will be beveled. The culvert and headwalls will be skewed 10 degrees to align with streamflow. Minor channel shaping (will occur/occurred) both downstream and upstream of the new culvert to improve the flow transition at the crossing. The shaping will be confined to the construction right-of- way. The reshaped areas (will be/were) stabilized with an 18" thick layer of ripap. The roadway will be elevated approximately 0ft above the existing road elevations. The crown of the roadway over the new culvert will be at 806.31', NGVD. No guardrails will be placed along each side of the roadway over the channel. Details of the project are contained in information received electronically at the Division of Water on

May 9, 2019 and in plans and information received at the Division of Water on

Stream : Little Ditch

Applicant : Lake County Board of Commissioners

Duane A Alverson

1100 East Monitor Street Crown Point, IN 46307-3521

Description

: The existing crossing carrying Clay Street over Little Jesse Ditch will be replaced with a new structure on essentially the same alignment to mitigate existing problems. The existing structure is comprised of a singular primary corrugated metal pipe with one smaller overflow pipe. According to the SI& A report, there are numerous rust through holes along the primary pipe. There is a drop in the primary pipe at the outlet and a scour hole at the outlet. The structure is to be replaced in 2019, new guardrail and rip rap will also be installed. The replacement structure will be a precast reinforced concrete three-sided structure with span length of 16' and height of 9'. The structure will have an out-to-out length of 40'. The culvert will be skewed 7°, and the wingwalls 45° to align with the streamflow. The new approach roads will not be raised above the existing approaches. The existing structure will be completely removed. The existing crossing carrying Clay Street over Little Jesse Ditch has timber wingwalls and substructure that are in need of replacement due to shifting that has occurred over time. The guardrail connection to the deck is deteriorating which, along with the short length of the guardrail, creates a safety hazard for motorists. Details of the project are contained in information received electronically at the Division of Water on May 9, 2019 and in plans and information received at the Division of Water on

Application # : FW-29948

Stream : Wabash River

Applicant : Duke Energy Indiana LLC

William Taylor

1000 East Main Street Plainfield, IN 46168

Description

This project is for the final cover grading plan associated with the Closure Plan for the Duke Energy Indiana, Inc. Legacy Dresser Generating Station. The project areas are located in Sections 1, 2, 11, and 14, Township 11 North, and Range 10 West as shown on the Terre Haute, IN USGS Quads and Aerial Maps on the following pages. We received permit approval for this project from IDNR on January 10, 2019 (see Certificate of Approval for FW-29523). Since then, some of the erosion and sediment control features including perimeter silt fence have been installed but the primary land disturbing activities have not yet begun at the project site except for tree clearing activities prior to April 1, 2019 in accordance with the Special Conditions of permit #FW-29523. Following installation of the silt fence, we discovered during site inspection that the perimeter silt fence boundary was extended in some areas such that the total Limits of Disturbance (LOD) acreage for the project has increased. In addition, the tree clearing activities included the clearance of an approximate 6.2 acre area located on top of the mine refuse pile cap area above elevation 480 and above the 100 year flood elevation of 466.0 NAVD but within the historic floodplain boundary. This was due to a decision made in the field to meet the permit Special Condition date of tree clearance prior to April 1st and in order to facilitate the proposed installation of perimeter erosion control features for this cap area. Details of the project are contained in information received electronically at the Division of Water on May 10, 2019 and in plans and information received at the Division of Water on

Location

: At the Duke Energy Indiana LLC Legacy Dresser Generating Station at 5152 Darwin Road

Specifically, this project is for the final cover grading plan associated with the Closure Plan for the Duke Energy Indiana, Inc. Legacy Dresser Generating Station. The project areas are located in Sections 1, 2, 11, and 14, Township 11 North, and Range 10 West as shown on the Terre Haute, IN USGS Quads and Aerial Maps that will be attached to our submittal.
