

Smoke Alarms

Smoke Alarms

Properly installed and maintained smoke alarms provide an early warning sign to your household and can save your life and those of your loved ones.

Ionization Smoke Alarms

Sound more quickly when flaming, fast moving fires occur.

Photoelectric Smoke Alarms

Quicker at sensing smoldering, smoky fires.

- Combination of these two smoke alarms are available and preferred for home safety.
- Special smoke alarms are made to assist those with hearing disabilities, often times using strobe lights and/or vibrate assistance.
- Smoke alarms can be purchased at your local hardware, home supply, or general merchandise store. Some fire departments offer smoke alarms at little or no cost.

Installation and Maintenance

- Install smoke alarms on every level of your house including basements and sleeping areas.
- Call your local fire department if you need assistance.
- Alarms that are hard wired need to be installed by a professional.
- Smoke alarms should be tested every month.
- Batteries should be changed once a year.
- Smoke alarms should be replaced every 8-10 years.
