

O'Bannon Woods State Park

Stargazing Program by Henry Sipes

Saturday, September 5th at 8:30 pm

Meet in the front lawn at the Aquatic Center

Are you crazy about the planets in the solar system? Do you wish you could identify more constellations than just the “big dipper”? Then come on out to our unique Stargazing Program!

Henry Sipes, JPL Solar System Ambassador, will bring out his telescopes and bring to life the planets, stars, and constellations of the Milky Way and beyond.

“We will start out observing Saturn and a bright globular cluster in the Hercules Constellation called M13. Then we will move on to observe the Lagoon and Trifid Nebulae in the Sagittarius constellation and galaxies like Andromeda.”

If the weather conditions are not ideal, the program will be moved to the Nature Center for a slideshow program

For more information, call the Nature Center at
