

Design Vehicle	Time Gap, t_g (s)
Passenger Car	8
Single-Unit Truck	10
Combination Truck	12

Note: Time gap is for a vehicle to turn right or left onto a two-lane highway with no median. The table values require adjustments for multilane highways as follows:

1. For left turns onto two-way highways with more than two lanes, add 0.5 s for passenger cars or 0.7 s for trucks for each additional lane, from left, in excess of one, to be crossed by the turning vehicle.
2. For right turns, no adjustment is necessary.

TIME GAPS FOR LEFT OR RIGHT TURNS, YIELD CONTROL
