805-T-105 CONVERSION OF METRIC STANDARDS

(Adopted 09-01-05)

Metric standard drawings for traffic signals have been included in this contract. These standard drawings were developed from the English traffic signal detail sheets. The conversion factors listed below have been provided to facilitate the conversion of metric units to English units. The numbers calculated using the general conversion factors are approximate.

General Conversion Factors

```
1 millimeter = 0.04 inches
1 millimeter = 0.0033 feet
1 meter = 3.28 feet
1 kilogram = 2.21 pounds
```

Steel Conversion Factors

```
10M bars = #4 bars
15M bars = #4 bars
30M bars = #10 bars
Grade 300 = Grade 40
```

Fastener Conversion Factors

```
M8 = 5/16"
M10 = 3/8"
M12 = 7/16"
M16 = 5/8"
```

Anchor Bolt Conversion Factors

```
M20 = 3/4" dia

30 \text{ mm} = 1 1/4" dia

40 \text{ mm} = 1 3/4" dia

60 \text{ mm} = 2 1/4" dia
```

Miscellaneous Conversion Factors

```
W 150 x 13 steel I-beam = W 6x9 steel I-beam 38 kN design load = 8000 lb design load
```
