

Indiana State Department of Health

WEEKLY INFLUENZA REPORT

Data as of Wednesday, April 18, 2012

The following report is meant to provide local health departments, hospital administrators, health professionals and residents with a general understanding of the burden of influenza-like illness (ILI). Data from several surveillance programs were utilized to produce this report. For further information about the data presented in this report, please call the ISDH Surveillance and Investigation Division at 317-233-7125.

Key Points:

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.05 %) and the sentinel surveillance system (.74%) is below baseline.
- During week 15, 12.5% (1/8) specimens were positive for seasonal influenza .
- Eight specimens were submitted for testing and 1 was positive for A H3 and 1 positive parainfluenza type 2.
- During week 15, 0 Indiana schools (K-12) reported that their absenteeism rate was 20% or higher.
- Universities and non-university facilities are experiencing low levels of ILI in their communities.

Percent of patients who presented at an emergency department (ED) with a chief complaint relating to influenza-like illness – Indiana, 20011/12 & 2010/2009, 2009/10, 2008/9 seasons, 2006/7 & 2007/8 seasonal averages.*† (EDs currently reporting = 113)

*Data obtained from the ISDH Public Health Emergency Surveillance System (PHESS). The 2008/9 season had a "Week 53" which the 2006/7 and 2007/8 seasons did not have, explaining the break in the seasonal average line.

† PHESS data is very timely, so the data reported is for the most current week.

Key Findings

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.05)

Sentinel reported influenza-like illness by sentinel type and reporting week with number of reporting sites Indiana, 2011/12 season.*

Reporting Week	All Reporters %ILI	Universities %ILI	Non-Universities %ILI
Week 15	.74	.9 (10)	.77 (20)
Week 14	1.34	1.27 (10)	1.3 (23)
Week 13	1.31	.64 (11)	1.5 (25)

**Data obtained from the ISDH Sentinel Influenza Surveillance System. This data is subject to change as sentinel sites can back-date their weekly reports.*

Percent of patients who presented at sentinel provider clinics with symptoms relating to influenza-like illness – Indiana, 2011/2012 data vs. 2006/07 -2010/2011 seasonal averages. 2009/2010 season excluded due to the pandemic*† (Number of sentinel provider clinics who reported this week = 36)

**Data obtained from the ISDH Sentinel Influenza Surveillance System.*

† Sentinel data has limited timeliness, so the data reported is for the week before the most current week. This data is subject to change as sentinel sites can back-date their weekly reports.

Sentinel reported influenza-like illness (ILI) by age category for the most current week reported – Indiana, 2011-12 season.

**Sentinel data has limited timeliness, so the data reported is for the week before the most current week. This data is subject to change as sentinel sites can back-date their weekly reports.*

Key Findings

- The percent of patients presenting at sentinel providers with ILI is below baseline.
- Non-universities are experiencing higher levels of ILI in their population than the university population.
