About our Series:

The impact of violence, abuse, neglect, disaster, war, and other harmful experiences continues long after the traumatic event has ended. Exposure to trauma is a pervasive issue that has significantly impacted the health and well-being of millions of Americans and nearly everyone seeking services in the public health and social services systems. Understanding how trauma affects the emotional, behavioral, cognitive, social, and physical functioning of the people we care for can improve our services.

All health and social service providers are welcome, including medical care providers, dentists, social workers, teachers, mental health workers, substance use disorder treatment providers, corrections officers, and community program staff, to name a few.

\*This webinar will be recorded, archived and available for viewing at the above link after February 7<sup>th</sup>.
