## 1 INTRODUCTION

On behalf of General Electric Company (GE), Arcadis U.S., Inc. (Arcadis) has prepared this First Quarter 2020 Groundwater Monitoring Report for the GE property located at 1412 13<sup>th</sup> Street in Tell City, Indiana (the Site; Resource Conservation and Recovery Act [RCRA] identification number IND006392773). This report summarizes the results of the analysis of groundwater samples collected from monitoring wells located at the Site and in the off-Site areas to the west of the GE property during March 2020.

### 1.1 Site Background

The Site is a closed small motor manufacturing facility that occupies approximately 16 acres of land to the east of 13<sup>th</sup> Street and south of Payne Street (State Road 37) on the northeastern side of Tell City. It is situated in a mixed industrial/commercial/residential area, with residential properties located to the west, northwest, and southwest (**Figure 2**). Land to the northeast is agricultural, and land to the southeast is a city park. A single residence is located immediately east of the Site, adjacent to the city park. Commercial/industrial properties are located immediately south of the Site and commercial sites are situated along Payne Street and along 9<sup>th</sup>, 10<sup>th</sup>, and Main Streets to the west. A small stream (Windy Creek) flows from south to north near the eastern side of the Site, and land along both sides of the stream is owned by the City of Tell City.

The Site is occupied by a large manufacturing building and smaller outbuildings that are situated to the east of the southern end of the building, near the southeastern corner of the Site. Investigation of the Site has identified four areas of concern (AOCs): AOC-1 is located around and east of the outbuildings, where initial site investigation activities found evidence of soil and groundwater impacts; AOC-2 is an area around a former trichloroethene (TCE) above ground storage tank to the east of the manufacturing building; AOC-3 is adjacent to the northeastern corner of the manufacturing building; and AOC-4 is located within the southwestern corner of the manufacturing building.

The Site has been entered into the RCRA Corrective Action program. Investigation of the Site, as overseen by the Indiana Department of Environmental Management (IDEM) has indicated impact to Site soil and groundwater by chlorinated volatile organic compounds (CVOCs) and impact to off-site groundwater by these compounds. The primary CVOC compound is trichloroethene (TCE), with tetrachloroethene (PCE) being a secondary compound, and the degradation byproducts of these compounds, cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride, being associated compounds.

To date, a total of 37 on-Site and off-Site groundwater monitoring wells have been installed at 21 locations (**Figure 3**; several locations have two to three co-located wells screened at varying depths). Routine quarterly groundwater monitoring of this well network began in the first quarter 2019.

### 1.2 Hydrogeologic Background

The Site and down-gradient area have three principal hydrogeologic settings:

1. The southeastern corner of the Site (including AOC-1) is underlain by non-native fill soils that extend up to 16 feet below ground surface (bgs). The remainder of the southeastern half of the

Site (including AOC-2) has limited volumes of non-native fill soils. Native clay underlies the fill soils in both areas and extends to depths of 55 feet bgs or deeper. The uppermost groundwater within AOC-1 is perched within the lower portion of the fill soils above the native clay. Thin layers of saturated sands have been encountered within the clay in both areas, at depths of 28 feet bgs or deeper. Groundwater flow in AOC-1 is influenced by Windy Creek to the east. The potential for groundwater migration is limited within most of the southeastern half of the Site due to the clay-dominated soils.

2. The northwestern half of the Site, extending west to approximately 11<sup>th</sup> Street, is underlain by the *Ohio River Outwash Aquifer Subsystem*, where an 8 to 12-foot thick layer of clay-rich soil overlies sand which extends to 30 to 35 feet bgs. The sand is underlain by gray clay. A thin (2 to 5 foot) saturated zone is perched in the sand on top of the gray clay. Groundwater flow within the sand unit is influenced by the Ohio River to the west. Thin saturated sand layers have been encountered within the gray clay that underlies the sand unit. Monitoring wells MW-5D, MW-6D, MW-8D, MW-9D, and MW-10D are screened within these deeper thin sand layers.
3. The sand unit thickens significantly between 7<sup>th</sup> Street and 11<sup>th</sup> Street and extends to a depth of 90 feet. Logs for the production wells to the west of 7<sup>th</sup> Street indicate that the sand extends to over 100 feet bgs at the locations of these wells. The saturated thickness within the sand unit also increases to more than 50 feet. The portion of the sand unit to the west of 11<sup>th</sup> Street is the *Ohio River Outwash Aquifer System*. Groundwater flow within the *Ohio River Outwash Aquifer System* is influenced by the Ohio River under both gaining and losing river conditions.

## 2 GROUNDWATER MONITORING

For the first quarter 2020 groundwater monitoring event, Arcadis mobilized to the Site on March 9<sup>th</sup> to gauge and sample all monitoring wells within the Site monitoring well network. At the initiation of the monitoring event, all monitoring wells were inspected and well covers, and plugs were removed. Well conditions and other observations were noted. Following inspection of the monitoring well network, the depth to groundwater in each well was measured with a water-level indicator to a precision of  $\pm 0.01$  foot. Any part of the fluid level measuring device that contacted the water or well casing was properly decontaminated between wells. Depth to groundwater and monitoring well total depth measurements are summarized in **Table 1**. Groundwater elevations are also calculated on **Table 1**, using the depth to groundwater measurements and surveyed elevations (in feet above mean sea level) at the top of each monitoring well casing.

After groundwater depths were measured, each monitoring well was sampled using IDEM's January 8, 2003 *Micro-Purge Sampling for Monitoring Wells* (low-flow sampling) protocols. Low-flow purging was conducted at each monitoring well using a properly decontaminated submersible stainless-steel centrifugal pump with the pump intake placed near the mid-point of each well screen. The pumping rate was maintained between 100 to 300 mL/minute to minimize drawdown effects and to limit suspension of any fine-grained sediments or aeration of the water being sampled. The submersible pump was connected to disposable, dedicated polyethylene tubing and a flow-through chamber containing multi-meter probes to monitor water quality parameters, including temperature, pH, turbidity, conductivity, dissolved oxygen, and oxidation-reduction potential (ORP). The probes/meters were calibrated per manufacturer specifications for each parameter prior to sampling and on a daily basis thereafter.

Groundwater samples were collected when water quality parameters stabilized for three successive readings, taken at 3 to 5-minute intervals. Stability was achieved when groundwater parameters readings were within  $\pm 0.1$  standard units (s.u.) for pH,  $\pm 3\%$  for conductivity, and  $\pm 10$  millivolts (mV) for ORP. Stabilization of turbidity occurred when three successive turbidity values were within 10% for values greater than 5 Nephelometric turbidity units (NTUs) or if three turbidity values were less than 5 NTUs. Copies of groundwater low-flow sampling logs are included in **Appendix A**.

Following stabilization of water quality parameters, groundwater samples were collected by disconnecting the polyethylene tubing from the flow-through cell and pumping water into laboratory provided sample containers. Quality assurance samples were collected in accordance with the IDEM approved Quality Assurance Project Plan (QAPP). Immediately after collection, the sample containers were labeled with sample location designation, time, and date of each collection, and a list of laboratory analyses to be performed. Each sample container was wrapped in bubble wrap or similar padding, and placed on ice in a cooler, pending delivery to SGS laboratory in Dayton, New Jersey for analysis of volatile organic compounds (VOCs) via EPA test method SW846 8260C.

### 2.1 Groundwater Flow

The groundwater elevations measured at each monitoring well were used to evaluate groundwater flow at and down-gradient of the Site.

Groundwater flow in the AOC-1 area (**Figure 4**) is to the east, toward Windy Creek. This flow direction is consistent with previous groundwater flow direction determinations for the area and shows that water that is at the top of the natural soil (former level of the Windy Creek floodplain) flows toward the creek.

Groundwater elevations for the thin sand layers encountered at depth in the native clay at the Site are summarized on **Table 1**. A potentiometric surface map is not presented for these data, as the sands appear to be laterally discontinuous.

Groundwater flow within the Ohio River Outwash Aquifer System and Subsystem is generally to the northwest (**Figure 5**). The aquifer has a shallow gradient at the Site, with an indication of an easterly flow component between MW-10S/MW-5S and MW-6S/MW-8S. There is a ten-foot elevation drop to the water table between MW-10 and MW-11, and then the water table flattens again to the west of MW-11.

Previous gauging has shown that the groundwater elevation of the western portion of the aquifer is tied to the Ohio River stage, with shallow wells being dry at low river stage, and flow being west to east at high river stage. Gauging data for the Ohio River at nearby Cannelton is included in **Table 1**.

## 2.2 Groundwater Analytical Results

The March 2020 groundwater analytical results are summarized and screened using the 2020 IDEM Remediation Closure Guide (RCG) residential tap water screening levels in **Table 2**. The SGS laboratory analytical report is included as **Appendix B**. **Appendix C** presents historical groundwater analytical results. Results for CVOCs and other compounds that were detected above screening levels during the 2020 groundwater monitoring event are presented on **Figure 6**.

The results indicate generally stable conditions, with the extent of CVOC concentrations delineated and decreasing with distance to the west of the Site. In the westernmost wells, CVOCs are at lower concentrations or were not detected within the shallow monitoring wells. CVOC concentrations are slightly higher in the intermediate co-located westernmost wells, indicating some vertical migration of impacts within this area.

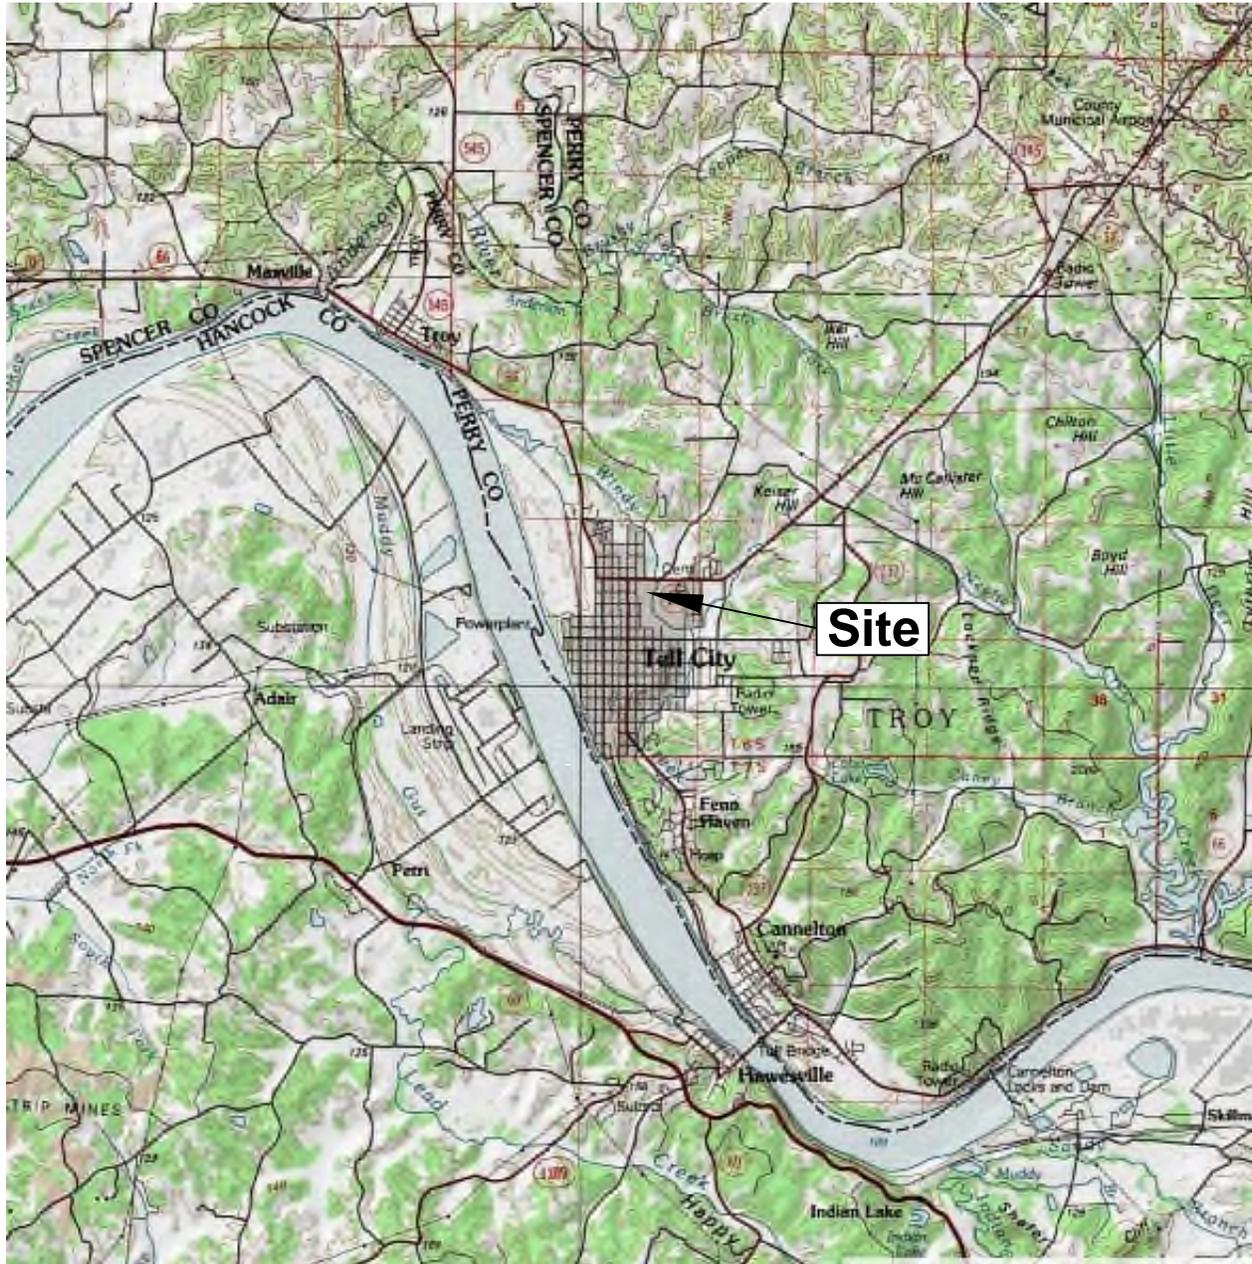

## 3 CITY WELL SAMPLING

The Tell City Water Department has sampled several production wells located to the west of the GE monitoring well network on a quarterly basis, since August 2018. The production wells include two wells that are used as a drinking water resource for the city (wells 8 and 9) and two wells that are used for non-potable cooling water by the Waupaca Foundry (wells 10 and 11; **Figure 2**). The most recent sampling of these production wells occurred on March 11, 2020.

The groundwater analytical results for the city and foundry wells are presented on **Table 3** and indicate that no VOCs have been detected above drinking water standards since quarterly sampling was initiated.

## Explanation of Laboratory Flags and Notes

- X Precision for the matrix spike duplicate, laboratory control sample duplicate or lab duplicate was outside of control limits.
- S Surrogate recovery was outside of laboratory control limits due to an apparent matrix effect.
- M1 Spike recoveries were not evaluated because of elevated levels of the spiked analyte in the parent sample.
- M The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory control limits.
- LC Results may be biased low because of low continuing calibration verification (CCV).
- HC Results may be biased high because of high continuing calibration verification (CCV).
- E The concentration indicated is above the instrument calibration range. This value is an estimated concentration.
- D Data reported from a dilution
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis. If the word 'dry' does not appear after the units, results are reported on an as-is basis.
- RPD Relative Percent Difference
- J Estimated Value
- B Analyte found in associated method blank
- N Presumptive Evidence of a compound
- (a) See note on laboratory data sheet

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Arcadis

**Job No** JD4697

**Site:** GE, 13th Street, Tell City, IN

**Report Date** 3/25/2020 3:08:37 PM

On 03/14/2020, 38 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.6 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JD4697 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

### MS Volatiles By Method SW846 8260C

<b>Matrix:</b> AQ	<b>Batch ID:</b> V2V2724
-------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD4697-18MS, JD4697-19DUP were used as the QC samples indicated.
- JD4697-14 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-15 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-17 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-17 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-17 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-14 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-22 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-14 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-15 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-18 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-20 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-18 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-19 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-14 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-20 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-19 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-22 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-22 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-21 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-21 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-17 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-22 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-15 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-15 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-20 for Bromomethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-20 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-19 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.

## MS Volatiles By Method SW846 8260C

**Matrix:** AQ **Batch ID:** V2V2724

- JD4697-19 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-18 for Chloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-21 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-18 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-21 for Bromomethane: Associated CCV outside of control limits high, sample was ND.

**Matrix:** AQ **Batch ID:** VL9461

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD4697-1MS, JD4697-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

**Matrix:** AQ **Batch ID:** VL9464

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD4697-33MS, JD4697-33MSD were used as the QC samples indicated.
- RPD(s) for MSD for Bromomethane are outside control limits for sample JD4697-33MSD. Outside control limits due to matrix interference.
- VL9464-MB for 1,1,2,2-Tetrachloroethane: MDL from current instrument.
- VL9464-MB for Dibromochloromethane: MDL from current instrument.

**Matrix:** AQ **Batch ID:** VL9465

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD4615-8MS, JD4615-8MSD were used as the QC samples indicated.
- Matrix Spike / Matrix Spike Duplicate Recovery(s) for Trichloroethene: are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- RPD(s) for MSD for Bromomethane are outside control limits for sample JD4615-8MSD. Outside control limits due to matrix interference.

**Matrix:** AQ **Batch ID:** VL9466

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD4790-11DUP, JD4790-9MS were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Methylene chloride are outside control limits. Outside control limits due to matrix interference.

**Matrix:** AQ **Batch ID:** VL9469

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD4786-87MS, JD4786-87MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike/ Matrix Spike Duplicate Recovery(s) for Trichloroethene, cis-1,2-Dichloroethene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- RPD(s) for MSD for Bromomethane are outside control limits for sample JD4786-87MSD. Outside control limits due to matrix interference.
- JD4697-37: Dilution required due to high concentration of target compound.
- JD4697-37 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JD4697-34 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

## SGS Sample Receipt Summary

**Job Number:** JD4697

**Client:** ARCADIS

**Project:** GE, 13TH STREET, TELL CITY, IN

**Date / Time Received:** 3/14/2020 9:40:00 AM

**Delivery Method:** FedEx

**Airbill #s:** 1215 6029 8472, 1215 6029 8450, 1215 6029 8

**Cooler Temps (Raw Measured) °C:** Cooler 1: (2.1); Cooler 2: (2.8); Cooler 3: (2.9);

**Cooler Temps (Corrected) °C:** Cooler 1: (1.8); Cooler 2: (2.5); Cooler 3: (2.6);

<u>Cooler Security</u>	<u>Y</u>	<u>or</u>	<u>N</u>		<u>Y</u>	<u>or</u>	<u>N</u>
1. Custody Seals Present:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	3. COC Present:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
2. Custody Seals Intact:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	4. Smpl Dates/Time OK	<input checked="" type="checkbox"/>		<input type="checkbox"/>

<u>Cooler Temperature</u>	<u>Y</u>	<u>or</u>	<u>N</u>
1. Temp criteria achieved:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
2. Cooler temp verification:	IR Gun		
3. Cooler media:	Ice (Bag)		
4. No. Coolers:	3		

<u>Quality Control Preservation</u>	<u>Y</u>	<u>or</u>	<u>N</u>	<u>N/A</u>
1. Trip Blank present / cooler:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
2. Trip Blank listed on COC:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
3. Samples preserved properly:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
4. VOCs headspace free:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>

<u>Sample Integrity - Documentation</u>	<u>Y</u>	<u>or</u>	<u>N</u>
1. Sample labels present on bottles:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
2. Container labeling complete:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
3. Sample container label / COC agree:	<input checked="" type="checkbox"/>		<input type="checkbox"/>

<u>Sample Integrity - Condition</u>	<u>Y</u>	<u>or</u>	<u>N</u>
1. Sample recvd within HT:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
2. All containers accounted for:	<input checked="" type="checkbox"/>		<input type="checkbox"/>
3. Condition of sample:	Intact		

<u>Sample Integrity - Instructions</u>	<u>Y</u>	<u>or</u>	<u>N</u>	<u>N/A</u>
1. Analysis requested is clear:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
2. Bottles received for unspecified tests	<input type="checkbox"/>		<input checked="" type="checkbox"/>	
3. Sufficient volume recvd for analysis:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
4. Compositing instructions clear:	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. Filtering instructions clear:	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>

The QC reported here applies to the following samples:

Method: SW846 8260C

JD4697-36, JD4697-38, JD4697-39

- (a) Dilution required due to high concentration of target compound.
- (b) Outside control limits due to matrix interference.
- (c) Outside control limits due to high level in sample relative to spike amount.
- (d) Result is from Run #2.

\* = Outside of Control Limits.

<b>Surrogate Compounds</b>	<b>Recovery Limits</b>
----------------------------	------------------------

S1 = Dibromofluoromethane	80-120%
S2 = 1,2-Dichloroethane-D4	81-124%
S3 = Toluene-D8	80-120%
S4 = 4-Bromofluorobenzene	80-120%

6.7.1  
6

# APPENDIX C

## Summary of Historic Monitoring Well Sampling Results

## Explanation of Laboratory Flags and Notes

- X Precision for the matrix spike duplicate, laboratory control sample duplicate or lab duplicate was outside of control limits.
- S Surrogate recovery was outside of laboratory control limits due to an apparent matrix effect.
- M1 Spike recoveries were not evaluated because of elevated levels of the spiked analyte in the parent sample.
- M The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory control limits.
- LC Results may be biased low because of low continuing calibration verification (CCV).
- HC Results may be biased high because of high continuing calibration verification (CCV).
- E The concentration indicated is above the instrument calibration range. This value is an estimated concentration.
- D Data reported from a dilution
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis. If the word 'dry' does not appear after the units, results are reported on an as-is basis.
- RPD Relative Percent Difference
- J Estimated Value
- B Analyte found in associated method blank
- N Presumptive Evidence of a compound
- (a) See note on laboratory data sheet

Summary of Historical Groundwater Analytical Results
