Re: Recycled Material Content

Dear Valued Customers:

Welch Packaging is committed to responsible use of resources. Corrugated packaging continues to be one of the most "environmentally friendly" materials available due to the significant use of recycled paper products as raw materials. In manufacturing corrugated materials, we purchase paper from a variety of suppliers in order to optimize quality, performance and cost.

Given our historical and anticipated mix of supply sources, we are confident your materials will contain at least 95% recycled material (including both pre- and post-consumer recycled content). Additionally, Welch Packaging's corrugator board grades WP130, 32 ECT, WP242 BC, WP243 EB, and 44ECT confidently contain 100% recycled material (including both pre- and post-consumer recycled content). Please reach out if a particular board grade's recycled content needs to be known.

Welch Packaging does monitor the recycled material of our suppliers and will notify you if the status of our corrugated products changes.

Sincerely,

David Williams
