Asbestos

Bridge Asbestos Exclusion

To simplify future bridge projects, contractors for all bridge construction and rehabilitation projects should provide the project engineer a document indicating the following prior to final payment:

I hereby certify that to the best of my knowledge no asbestos-containing material was used as a building material during this project.

Having this statement on file exempts all new construction/renovation projects from future asbestos inspection and abatement. **Please send a copy of this statement to the Environmental Services Section, Division of Pre-Engineering and Environment.**

See the Asbestos Section of the Laws and Regulations Section for further information.
