**I-69 Tier 2 Study  
Section 2  
Final Wetland Assessment Report  
February 2010**

**1. Introduction**

This Final Wetland Assessment Report is a support document to the Tier 2 Final Environmental Impact Statement (FEIS), and is intended to present detailed information regarding the identification, characterization and evaluation of project area wetland resources. This document also describes measures that have been utilized throughout project development to avoid, minimize and mitigate impacts to wetlands. Finally, the document describes the unavoidable impacts to wetlands associated with the Refined Preferred Alternative as compared to other build alternatives.

This report is intended to be the primary tool for facilitating coordination of proposed wetland impacts in Section 2 with State and Federal regulatory agencies and documenting compliance with regulatory requirements to avoid, minimize and mitigate wetlands impacts.

Prior to European settlement, the U.S. Fish and Wildlife Service estimated that Indiana had some 5,600,000 acres of wetlands. Over the past 200 years, Indiana has lost approximately 85% of its wetlands (Dahl, 1990). As of the mid-1980s, Indiana was estimated to have approximately 813,032 acres of wetlands (Rolley, 1991). Of this area, approximately 245,817 acres were located in the I-69 Tier 1 Study Area. Because of the importance of these ecosystems, Executive Order 11990 establishes a federal policy of “no net loss of wetlands.”

Description of Section 2 Preferred Alternative 3C Corridor

Section 2 of the Preferred Alternative 3C corridor begins at the Section 1 SR 64 interchange and proceeds to US 50 east of Washington, a distance of some 28.6 miles. From SR 64, the corridor turns to the northeast to cross the East Fork of Keg Creek near Gibson County Roads 950E and 125S. The corridor essentially parallels SR 57 approximately one mile to the west. Near the Patoka River, SR 57 turns to the north so that it comes closer to the Alternative 3C corridor at the crossing. The crossing of the Patoka River was placed approximately ½ mile west of SR 57 to minimize impacts on the Patoka National Wildlife Refuge. The crossing location has been viewed, by representatives of the Refuge, as the best location in the SR 57 corridor to minimize impacts in the Refuge. This location was reserved for a future highway corridor by the Final EIS that established the Patoka National Wildlife Refuge. Upon crossing the Patoka River, the corridor leaves Gibson County and proceeds into Pike County.

Leaving the Patoka Bottoms, the corridor ascends into the Boonville Hills Physiographic Region near Pike County Road 50S. The corridor follows through reclaimed coal mine areas and crosses SR 57 near a private coal haul road approximately ¾ mile north of Division Road at Glezen. This location is approximately four miles south of Petersburg. This location is south of Flat Creek, an area identified as environmentally sensitive. East of SR 57, the corridor shifts to the east to remain in the Boonville Hills Physiographic Region through recently mined ground and then runs north, parallel to Meridian Road. Along Meridian Road, it is in the Wabash Lowland Physiographic Region, but is associated with higher ground and reclaimed mine land.

North of Pike County Road 300N, the corridor of preferred Alternative 3C turns northeast, crossing SR 56/61 about one mile south of Petersburg. Traversing eastward to avoid the Prides Creek Lake recreation area, the corridor makes use of reclaimed mine land and then turns to the north to cross SR 356 about 1½ mile east of Petersburg (near Alford). From this point, the corridor proceeds to the northeast to parallel existing SR 57, which is approximately one mile to the west. Continuing in the Wabash Lowland Physiographic Region, the corridor turns north near Pike County Road 425E to begin its approach to the East Fork of the White River at the Daviess County line. This crossing is about 1½ miles east (upstream) of the SR 57 crossing of the East Fork of the White River (Gil Hodges Bridge).

Proceeding just west of Wonder Pond, south of Washington, the corridor shifts to the northwest near Daviess County Road 550S to begin its path around the east side of Washington. North of Daviess County Road 375S, the corridor crosses Veale Creek. It then runs parallel to and northwest of the Veale Creek watershed, eventually crossing SR 257 about one mile south of the US 50 By-pass around Washington. Crossing Hurricane Branch, the corridor turns to the north to cross US 50 approximately ½ mile east of the Washington By-pass (US 50).

The corridor has been located along a narrow strip crossing the Patoka River Bottoms so as to minimize impacts to wetlands and forests. The Patoka River Bottoms, where the highway will be placed on structure, includes potential wetland and forest mitigation sites. Threatened and endangered species have been recorded upstream and downstream. Throughout this stretch of highway, coal resources are available. Some areas of the roadway will cross surface mined areas, while other areas will cross over underground mined areas.

Crossing the East Fork of the White River, there are a number of homes. Archaeological sites may be of significance in the general area and at this crossing of the White River. Similarly, there is an excellent opportunity for wetland and forest mitigation in the floodplains of the East Fork of the White River.

Strip mining has diminished the number of historic properties in the area, and has reduced the cohesiveness of the historic landscape. Segments of the Wabash and Erie Canal are crossed by this section of I-69 in the areas of Hurricane Creek, Patoka River and Flat Creek.

Most wetlands in the project corridor are found along rivers and streams and within their associated floodplains. The major wetland areas that the Refined Preferred Alternative crosses within the Section 2 corridor include resources associated with the Patoka River, Flat Creek, Pride's Creek, and the East Fork of the White River. Several other smaller wetland complexes exist in the project corridor as well along unnamed streams and in isolated depressional areas. Refer to Figures 1-1 through 1-5 and 2-1 through 2-5 to see the Approved Study Corridor and Proposed Alternatives on U.S. Geological Survey Base Mapping. Refer to Figures 3-9 and 4-9 sheets 1-13 to see Proposed Alternatives with Labeled Wetlands and Ponds.

## **2 Regulatory Definitions**

### Waters of the U.S.

Waters of the U.S. include wetlands that are defined by the Environmental Protection Agency (EPA) and U.S. Army Corps of Engineers (USACE) as:

*Those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas*

### Waters of the State

“Isolated” wetlands that do not fall under U.S. Army Corps of Engineers Clean Water Act jurisdiction are regulated through the Indiana Department of Environmental Management (IDEM) Isolated Wetlands Regulatory Program. They are considered isolated wetlands because they are not connected or adjacent to “waters of the U.S.,” which are regulated by the Corps.

As part of this program, isolated wetlands are grouped into one of three Classes based upon wetland quality. Class III isolated wetlands are generally of higher quality and Class I wetlands of lower quality,

while Class II wetlands fall somewhere in the middle. Different wetland classes have different mitigation requirements.

### Wetlands

Wetlands are important ecosystems that include swamps, bogs, marshes, mires, fens, and other wet areas. Wetlands are often transition areas between upland and deepwater habitats. There are a number of definitions for a wetland; however, all definitions have three common criteria.

- **Hydrophytic vegetation** - plants that are adapted to a wet environment;
- **Hydric soils** - soils that are characterized by anaerobic conditions, and;
- **Hydrology** - an area that is inundated or saturated to the surface for at least 5% of the growing season in most years.

The presence of a wetland within the landscape often results in a number of important functions, some of which include:

- Primary Production and Nutrient Transport
- Habitat for Animals
- Sanctuary for Animals
- Hydrological Support for Adjacent Communities
- Shoreline Protection
- Storm/Flood Storage
- Storm/Flood Peak Reduction
- Groundwater Recharge
- Water Purification
- Water Supply
- Effect Climatic Conditions (Temperature, Oxygen, and Carbon Dioxide Cycles)
- Isolated Genetic Population Pools
- Reproduction and Development

In addition, wetlands provide many functions valuable to humans including the following:

- Commercial Fisheries
- Recreation (Hunting, Fishing, Boating, and Swimming)
- Sites for Development
- Forestry Products
- Agricultural Products
- Aesthetics
- Educational Centers
- Peat Mining

The following provides a short description of the types of wetlands and open water systems that occur within the Section 2 Corridor.

#### ***Floodplain Forest***

Floodplain forest communities within the project area are typically located as narrow polygons along stream channels. In general, these areas consist of canopy tree species such as red maple (*Acer rubrum*), eastern

**Figure 3 - Floodplain Forest**

cottonwood (*Populus deltoides*), American elm (*Ulmus americana*), and ash (*Fraxinus* spp.). Dominant shrubs and saplings in these resources include box elder (*Acer negundo*), and common elderberry (*Sambucus canadensis*). The herbaceous layer often includes nettles (*Urtica* spp.) poison ivy (*Toxicodendron radicans*), and jewelweed (*Impatiens capensis*). Floodplain forests within the project area are generally ranked high for wildlife habitat using the InWRAP methodology. Many of these, because of their proximity to channelized streams and location within the floodplain also score high for flood and storm water storage. An example of a floodplain forest within the Section 2 project area is shown in Figure 3.

### **Scrub/Shrub**

Scrub/shrub wetland areas are dominated by woody vegetation less than 20 feet (6 meters) tall, including shrubs, young trees, and trees or shrubs that are small or stunted because of environmental conditions. All water regimes, except subtidal, are possible (Cowardin, 1979). Plants characteristic of project area scrub/shrub wetlands include willows (*Salix* spp.), buttonbush (*Cephalanthus occidentalis*), and ash saplings (*Fraxinus* spp.). In many locations, these resource areas appear to be prior forests disturbed by activities such as strip mining. Many were found to be colonized with a monostand of one type of young tree, such as red maple (*Acer rubrum*) or willow (*Salix* sp.). In areas where scrub/shrub resources did not show these signs of disturbance, they generally ranked high for wildlife habitat function. Several areas originally mapped as scrub/shrub on NWI maps were found to have matured and are now classified as floodplain forest. Figure 4 shows an example of a scrub/shrub community within Section 2.

**Figure 4 – Shrub/Scrub Wetland**

### **Aquatic Bed**

Aquatic bed includes wetlands and deepwater habitats dominated by plants that grow principally on or below the surface of the water for most of the growing season in most years. Water regimes include subtidal, irregularly exposed, regularly flooded, permanently flooded, intermittently exposed, semipermanently flooded, and seasonally flooded. Aquatic bed wetlands represent a diverse group of plant communities that require surface water for optimum growth and reproduction. They are best developed in relatively permanent water or under conditions of repeated flooding. The plants are either attached to the substrate or float freely in the water above the bottom or on the surface (Cowardin et al., 1979).

**Figure 5 –Aquatic Bed**

Project area aquatic bed occurrences include an isolated site with emergent wetland fringes (Sec2-W80) and an oxbow of the Patoka River (Sec2-W17) within Patoka National Wildlife Refuge. This resource type is considered significant to wildlife habitat, particularly amphibian habitat. Aquatic bed resources also provide flood storage and attenuation, and water quality protection. Figure 5 represents an example of an aquatic bed community in the Patoka River

area.

### ***Emergent Wetlands***

Emergent wetlands are characterized by erect, rooted, herbaceous hydrophytes, excluding mosses and lichens. They are also known as marshes or wet meadows. The vegetation in emergent wetlands is present for most of the growing season in most years. Perennial plants usually dominate emergent wetlands. All water regimes are included except subtidal and irregularly exposed (Cowardin et al., 1979). Within the project area, emergent wetlands were found along the edges of forested or scrub/shrub wetlands and forming fringes around the perimeter of ponds. Plants characteristic of project area emergent wetlands include soft-stem bulrush (*Scirpus validus*), sedges (*Carex* spp.), spike rushes (*Eleocharis* spp.), and arrowhead (*Sagittaria latifolia*). Several of these locations also showed presence of the invasive non-native reed canary grass (*Phalaris arundinacea*). One occurrence of a natural spring with an associated emergent marsh was also noted within the project area (wetland Sec2-W166A). No bogs or fens, two of the highest quality Emergent Wetlands, were observed within the corridor. InWRAP generally ranked emergent marshes high for habitat in areas where these marshes were bordering another resource area, because of the diversity they provide within the wetland complex. When located in an area with high flooding potential, this resource type also scored high for flood attenuation. An example of an emergent wetland in the Section 2 project area is shown in Figure 6.

**Figure 6 – Emergent Wetland**

### ***Farmed wetlands***

Sections 401 and 404 of the Clean Water Act also regulate those wetlands that have been temporarily converted for active agricultural use. Known as “farmed wetlands”, the USDA National Food Security Act Manual, 3rd Edition, September 2000 (NFSAM) defines these as “Wetlands that were drained, dredged, filled, leveled, or otherwise manipulated before December 23, 1985, for the purpose of, or to have the effect of, making the production of an agricultural commodity possible, and continue to meet specific wetland hydrology criteria.” The 1996 Swampbuster provisions of the Farm bill allows for the continuation of agricultural activities on certified wetlands and is enforced through local county Natural Resource Conservation Service (NRCS) offices. Any change in the status of the farmed wetlands, including changing drainage or depositing fill, requires a Section 404 Department of the Army Permit from the USACE and a Section 401 Water Quality Certificate from the Indiana Department of Environmental Management (IDEM).

An investigation for farmed wetlands, as defined by the USDA National Food Security Act Manual, 3rd Edition, September 2000 (NFSAM), was conducted for each alternative carried forward for detailed analysis. According to NRCS guidelines, all four of the following criteria must be met in determining a farmed wetland:

1. The area must have been manipulated prior to December 23, 1985.
2. An agricultural commodity was produced once before December 23, 1985.
3. The area meets the required hydrology criteria for farmed wetlands.
4. The site has not been abandoned.

To determine if wetland signatures were present, a minimum of 5 years of Farm Service Agency (FSA) aerial imagery slides were reviewed at the FSA Service Center in each county. The appropriate 5 years of slides that represent normal precipitation to be used for review were determined and provided by NRCS.

In Gibson County, the years of normal rainfall (slides viewed) were 1981, 1982, 1985, 1986, and 1990. In Pike County, the years of normal rainfall were 1980, 1981, 1982, 1984, and 1985. In Daviess County, the years of normal rainfall were 1980, 1981, 1982, 1984, 1985, 1986, 1992, and 1993.

### ***Lakes and Ponds***

Lacustrine systems are described as deepwater or wetland habitat including permanently flooded lakes and reservoirs, intermittent lakes, and tidal lakes with salinity below 0.5% (Cowardin et al., 1979). Lacustrine resources are situated in a depression or dammed river channel and have less than 30% aerial coverage by vegetation. Total area of lacustrine systems is greater than 8 ha (20 acres), however, smaller systems are included if an active wave formed or bedrock shoreline features makes up all or part of the boundary or if water depth exceeds 2 m (6.6 feet) in the deepest part of the system during periods of low water (Cowardin et al., 1979).

There are no major lakes within the Section 2 corridor, however, there are three (3) waterbodies classified as lacustrine systems within the project area. Two of these appear to have been created by mining; the third was formed through dam construction and exists in the northern part of the project area. The mining ponds are in Pike County and encompass 19.3 acres and 16.2 acres. The third (unnamed) pond is in Daviess County and is approximately 21 acres in size.

Cowardin et al. (1979) designates ponds as palustrine unconsolidated bottom (PUB) features. This resource type includes aquatic habitats with at least 25% cover of particles smaller than stones and a vegetative cover less than 30%. Water regimes are restricted to subtidal, permanently flooded, intermittently exposed, and semipermanently flooded. Unconsolidated bottoms are characterized by the lack of large stable surfaces for plant and animal attachment (Cowardin et al., 1979).

The project area includes 81 areas classified as unconsolidated bottom. These primarily consist of constructed farm ponds. The majority of these ponds are small (less than 0.5 acres). However, they range in size from only 0.005 acres up to 4.6 acres.

### **3. Methodology**

A literature search was conducted for wetland data as part of the initial ecological data collection during the Tier 1 EIS process. Information was gathered from the United States Geological Survey quadrangles and National Wetland Inventory (NWI) maps (USGS, various dates and US Fish and Wildlife Service, various dates). This information was then used to conduct field visits to verify wetland locations and classifications within the Section 2 corridor approved in Tier 1. This corridor was generally 2,000 feet in width, but narrower where the corridor passes through the area reserved for it at the Patoka River, in the area of the Patoka National Wildlife Refuge.

Field visits were conducted by project wetland scientists in May, June and August of 2005 and in January 2006 to examine and qualify wetlands that were anticipated to be impacted by either project Alternative (A or B) as part of the Tier 2 study. Observations made during these initial field investigations were used to help select a Preferred Alternative. Once the Preferred Alternative was selected, field delineations were conducted in June 2009 to help refine impact calculations for each resource type.

Delineations were conducted in accordance with the USACE 1987 Wetland Delineation Manual and associated technical memoranda.

Wetland areas were also assessed using the Indiana Wetland Rapid Assessment Protocol (InWRAP). The InWRAP methodology was specifically required for the I-69 project to allow for standardized analysis of wetland quality across all sections of the project corridor. This methodology consists of an analysis of NWI polygons (as well as wetlands that were not listed by NWI, but located during field investigations) to rank various wetland functions and values using a worksheet based approach. (Taylor Univ., 2000). For further details of the InWRAP methodology refer to:

<http://www.taylor.edu/academics/acadDepts/ees/wetlands/iswamp/assess.htm>. Functional analysis using InWRAP was conducted only on wetlands (wetland complexes) within the Alternatives Carried Forward for Further Analysis.

#### 4. Results and Discussion

##### Alternative 3C Corridor Wetlands and Open Water Systems

Wetlands and open water systems are spread throughout the Section 2 corridor. The majority are found along rivers and streams and within their associated floodplains. Wetland types within the study area are predominantly floodplain forest. Emergent and scrub/shrub wetlands occur less frequently within the project area either as complexes associated with forested resources or in low lying areas that are generally too wet to be tilled. Two occurrences of wetlands classified as aquatic bed were also located within the Section 2 project study area. Open water systems within the study area consisted of artificial lacustrine (lake) and unconsolidated bottom (pond) features. Using the classification of Cowardin *et al.* (1979), a total of 105 wetlands and 84 open water systems were identified within the Section 2 Corridor. Tables 1, and 2. below show the distribution of each wetland type and open water system within each county.

**Table 1: NWI Wetlands and Open Water Systems within Section 2 Corridor, Summary by Type and County**

Wetland Type	Gibson County		Pike County		Davies County		Section 2 Total	
	Number	Area (acres)	Number	Area (acres)	Number	Area (acres)	Number	Area (acres)
Emergent	0	0	11	9.2	13	12.9	<b>24</b>	<b>22.1</b>
Scrub/Shrub	0	0	14	35.7	5	7.2	<b>19</b>	<b>42.9</b>

<b>Total</b>	<b>11</b>	<b>22.5</b>	<b>83</b>	<b>149.2</b>	<b>73</b>	<b>88.8</b>	<b>167</b>	<b>260.6</b>

\*These wetlands are field verified within the right-of-way and as shown in NWI data within the remaining corridor.

### Wetland Resources for Section 2 Alternatives

The following provides a narrative description of each wetland or wetland complex that would be impacted by the proposed construction limits of the Refined Preferred Alternative as well as Alternatives A, B and the DEIS Preferred Alternative. A wetland complex consists of one or more contiguous or adjoining community types represented as individual polygons. Each polygon within a complex was numbered according to wetland type (emergent, forested scrub shrub or aquatic bed) to allow for quantification of impacts to each wetland type. Appendix A, Wetland Site Forms, provides an overall description of each wetland or complex including mapping and photograph documentation. Appendix B includes the Wetland Quality Assessment Profile which generates a ranking for animal habitat, botanical and hydrologic function, based on the InWRAP summary data. Appendix D includes the Wetland Matrix for I-69: Section 2, which summarizes the assessment results. Appendix E includes the InWRAP field data sheets which document the base data collected for each complex, including the major plant communities, soils, hydrology, topography, and component functions and values of the resource. Refer to the Figure 3-9 series and the Figure 4-9 sericesto see the Alternatives with Labeled Wetlands and Ponds.

Since the publication of the Draft Environmental Impact Statement several changes have been made to the wetland report. Total wetland acreages have been refined. Overall wetland areas and impact calculations used for the DEIS were based on NWI wetland boundaries. Additional field work completed since the DEIS was used to further refined the wetland boundaries. This affected the overall size of the wetlands. Additionally, a few wetlands identified in the DEIS were subsequently discovered to not meet the 3 wetland criteria and were thus removed from the wetland impact consideration. Furthermore, wetland impacts in the tables in the DEIS were calculated using right-of-way limits. In the FEIS they are calculated using both right-of-way and construction limits. Finally, additional field work conducted between the DEIS and FEIS identified previously undocumented wetlands within the refined preferred alternative, including those impacted by local access roads not evaluated at the DEIS stage. Within the individual wetland descriptions that follow, the changes that were made to the data that was previously included in the Draft Wetland Assessment Report (Appendix J of the Section 2 Revised DEIS) are documented.

#### *Sec2-W4 (polygon 4)*

This site is classified as a swamp forest wetland 10.83 acres in size, with 95 – 100% vegetative cover. Red maple (*Acer rubrum*), ash (*Fraxinus* spp.) and elm (*Ulmus americana*) are found throughout the resource both as mature trees and as saplings. Herbaceous ground cover includes species such as fowl manna grass, jewelweed, and poison ivy. Hydrology is likely due to its depressional nature, local runoff,

and poorly drained soils. Animal habitat and botanical diversity are both ranked fair under InWRAP summaries for the site. Although this site is typical of forested wetlands found throughout the project area, it is likely that it plays an important role in flood storage and attenuation for the area, as it is one of very few wetlands located in this region. Its role in the landscape is therefore considered significant. This resource is regulated under USACE and IDEM jurisdiction due to its immediate adjacency to a tributary of East Fork Keg Creek. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 0.04 acre of impact for Alternative A and the DEIS Preferred and 5.3 acre of impact for Alternative B. The construction limit impacts are now 0.03 acre for Alternative A and the DEIS Preferred Alternative and 5.05 acres for Alternative B. The Refined Preferred Alternative was modified to completely avoid impacts to this resource.

*Sec2-W11 (polygon 11)*

This 54.27 acre resource is defined as a floodplain forest associated with Hurricane Creek. The tree canopy of red maple and ash is more or less closed and results in a sparse under story below. Herbaceous ground cover consists of scattered sedges and grasses, as well as poison ivy. This resource area rates good for both hydrology, due to its floodplain location, and for wildlife habitat due to open water elements and good protective cover. This wetland falls under the jurisdiction of both the USACE and IDEM due to its hydrologic connectivity with the South Fork Patoka River. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been further refined since the publication of the DEIS. These refinements were due to additional field work. The wetland impact is now less than previously anticipated. The Draft Wetland Report documented 0.64 acre of impact for Alternative A and the DEIS Preferred and 1.03 acre of impact for Alternative B. The construction limit impacts are now 0.09 acre for Alternative A and the DEIS Preferred Alternative, 0.46 acre for Alternative B and 0.06 acre for the Refined Preferred Alternative.

*Sec2-W15 (polygon 15)*

The site consists of a 3.08 acre strip of floodplain forest wetland adjacent to a ditch. Wetland hydrology is affected by ditching and the resource is colonized by monostands of the invasive exotic reed canary grass (*Phalaris arundinacea*). Poison ivy (*Toxicodendron radicans*) is also dominant in this degraded resource and a row of young silver maples (*Acer saccharinum*) is present on the upland border. The wetland exhibits zonation and interspersion typical of fair wildlife habitat and provides only fair botanical measures due to the presence of reed canary grass and low plant diversity within the resource. This wetland falls under the jurisdiction of both the USACE and IDEM due to hydrology connection with an intermittent tributary to the South Fork of the Patoka River. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been further refined since the publication of the DEIS. These refinements were due to additional field work. This wetland has increased slightly in size from 3.05 acres to 3.08 acres as a result. The Draft Wetland Report documented 0.71 acre of impact for Alternative A and the DEIS Preferred Alternative and 0.57 acre of impact for Alternative B. The construction limit impacts are now 0.81 acre for Alternative A and the DEIS Preferred Alternative, 0.69 acre for Alternative B, and 0.86 acre for the Refined Preferred Alternative.

*Sec2-W17 (polygons 17/25 and 19/24)*

This 11.63 acre wetland complex lies within the Patoka National Wildlife Refuge, a large area of bottom land hardwood forest established as a refuge in 1994. Due to the uniqueness and local significance of this area, the project corridor crossing was established early on in the conceptual design and was located in this area due to existing surrounding disturbance and the somewhat degraded nature in the immediate area. The wetland complex is made up of polygons designated as 17/25 and 19/24. Polygon 17/25 represents a floodplain forest wetland community. Polygon 19/24 is an aquatic bed community. The forested resource associated with the old channel of the Patoka River (polygon 17/25) consists of a

bottomland forested resource dominated by silver maple and red maple with a sparse understory dominated by Gray's sedge and poison ivy. Polygon 19/24 is classified as aquatic bed and consists of shallow open water in the old channel of the Patoka River. The presence of the floating emergent duckweed (*Lemna* sp.) was noted during summer field surveys. Buttonbush is scattered along the edges of the open water resource. The wetland complex is determined to be under USACE and IDEM jurisdiction as a result of its direct connection with the Patoka River. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been further refined since the publication of the DEIS. These refinements were due to additional field work. The overall forested acreage of this complex has increased from 9.12 acres to 9.62 acres and the aquatic bed portion of this wetland has decreased from 2.43 acres to 2.01 acres as a result. The Draft Wetland Report documented 3.13 acre of forested wetland impact and 0.6 acre of aquatic bed impact for Alternative A and the DEIS Preferred Alternative and 3.07 acre of forested impact and 0.51 acre of aquatic bed impact for Alternative B. The construction limit impacts are now 2.95 acres of forested impact and 0.39 acre of aquatic bed impact for Alternative A and the DEIS Preferred Alternative, 2.90 acres of forested wetland impact and 0.40 acre of aquatic bed impact for Alternative B, and 3.00 acres of forested wetland and 0.40 acre of aquatic bed impact for the Refined Preferred Alternative..

*Sec2-W32 (polygons 32 and 32A)*

Polygons 32 and 32A form a 52.56 acre wetland complex located along a stream channel and partially within an old field. The swamp forest portion of this complex is dominated by green ash in the overstory and barnyard grass, jewelweed and beggars ticks in the herbaceous layer. The wetland forms a narrow fringe along the channelized stream and shows signs of flooding during periods of high water. The bordering wet meadow wetland portion of this complex consists of a sedge meadow that has formed in a low lying area of an adjacent field. Sedges and rushes identified within this resource include *Juncus tenuis*, *Juncus acuminatus*, and *Eleocharis obtusa*. Both community types show signs of disturbance such as ditching within the forested system and prior cultivation of the meadow area. Although the wet meadow is small in size and occurs within an old field, it has a hydrologic connection to the forested area and is considered part of the larger complex. The wetland complex is determined to be jurisdictional under both USACE and IDEM regulations due to its direct association with an unnamed tributary to the Patoka River. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been significantly refined since the publication of the DEIS. These refinements were due to additional field work. The boundary of the forested component of the complex was redefined within the right-of-way for the Refined Preferred Alternative; however the boundary of the entire wetland was not redefined due to its overall large size. For this reason the forested component is still listed as 48 acres as noted in the Draft Wetland Report. The emergent wetland component of this wetland increased from 2.68 acres to 4.56 acres based on refinement of the boundaries as a result of additional field work. The Draft Wetland Report documented 2.73 acre of forested wetland impact and 1.41 acre of emergent wetland impact for Alternative A and the DEIS Preferred Alternative and 2.71 acre of forested impact and 1.37 acres of emergent wetland impact for Alternative B. The construction limits are now 0.28 acre of forested impact and 2.65 acres of emergent wetland impact for Alternative A and the DEIS Preferred Alternative, 0.26 acre of forested wetland impact and 2.63 acres of emergent wetland impact for Alternative B, and 0.29 acre of forested impact and 2.84 acre of emergent wetland impact for the Refined Preferred Alternative.

*Sec2-W37 (polygons 37, 37A and 38)*

This 8.87 acre wetland complex consists of a swamp forested section, a scrub-carr section and emergent shallow marsh section. The scrub-carr and swamp forest areas are separated by a narrow steep upland, and a shallow marsh wetland area bordering on one of the forested wetlands. These resources are bounded by roadways and agricultural land. Ditching was observed within the wetland areas, as well as a culvert leading under the roadway. The swamp forest wetland is dominated by red maple and green ash with jewelweed and false nettle in the understory. Reed canary grass was observed scattered throughout the site; however was not frequent enough to be considered dominant. Due to the closed canopy, wood

litter and protected nature of the forested resource it was considered to provide fair wildlife habitat. The scrub-carr section of the wetland appears to be a formerly forested site that was disturbed and is successional. The shallow marsh portion of the wetland complex is dominated by reed grass (*Phragmites australis*). The dense herbaceous layer and position in the landscape led to a good rating for hydrologic function, particularly for storm water attenuation and storage. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic association with a Flat Creek tributary. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. The forested acreage changed from 3.70 to 3.71 acres, the scrub-shrub wetland decreased from 5.11 acres to 4.97 acres and the emergent wetland acreage decreased from 0.55 acre to 0.19 acre. The Draft Wetland Report documented 0.03 acre of forested wetland impact for Alternative A and the DEIS Preferred Alternative, and 1.89 acres of forested wetland impact, 2.41 acres of scrub-shrub wetland impact, and 0.34 acres of emergent wetland impact for Alternative B. The construction limit impacts are now 1.79 acres of forested wetland impact, 2.05 acres of scrub-shrub impact, and 0.02 acre of emergent wetland impact for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would not impact this complex.

*Sec2-W43 (polygons 43, 44 and 45)*

This 8.23 acre wetland complex is associated with Flat Creek and has been dissected by the railroad, the mine road and SR57. InWRAP assessment for these resources indicated that despite the surrounding land use they provide some areas of good habitat for wildlife due to tree cover and maturity, presence of standing water, as well as areas of scattered woody material and diversity of cover type. The forested wetlands are dominated by red maple in the upper canopy and nettle and jewel weed in the herbaceous layer. Average plant diversity and sparse understory result in fair ratings for this complex for botanical and hydrological functions. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic connection to Flat Creek. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. The total forested acreage of this complex decreased from 13.62 acres to 8.23 acres. The Draft Wetland Report documented 1.16 acres of forested wetland impact for Alternative A and the DEIS Preferred Alternative, and 0.53 acre of forested impact for Alternative B. The construction limits impacts are now 0.77 acre of forested wetland impact for Alternative A and the DEIS Preferred Alternative, 0.48 acre of forested wetland impact for Alternative B, and 0.93 acre of impact for the Refined Preferred Alternative.

*Sec2-W55A (polygons 55a, 55b, 55c and 56a)*

This 22.07 acre wetland complex consists of 4 interconnected wetland polygons. Polygon 55A is a swamp forest with pockets of standing water throughout, making this area considerably wetter than most forested resources found in the project area. Nettle, bent grass and moneywort were common throughout the parcel. A dense upper canopy of red maple, as well as the presence of standing water, makes the herbaceous layer fairly sparse. The eastern edge of the forested wetlands is bordered by a wet meadow wetland (polygon 55B). Polygon 55C is also a swamp forested resource, but is more typical of forested wetlands in the area, in that it does not have standing water present and has an herbaceous layer that is marginally hydrophytic. Across the county road, and connected via a culvert, polygon 56A is a scrub-carr resource with dense sycamore and red maple saplings. It is likely that this location was formerly mined and is now recovering as a successional resource area. Due to the vernal pool like nature of polygon 55A with seasonal pockets of water throughout, this resource receives a fair rating for wildlife habitat and is considered locally significant due to its uniqueness in the surrounding landscape. This complex is determined to be under USACE and IDEM jurisdiction by virtue of its hydrologic connection with a Prides Creek tributary. This wetland complex is now designated Sec 2-W55A since Sec 2-W55 is a pond not associated with this complex. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. The acreage of the scrub-

shrub portion of this complex remained the same at 14.15 acres. The total forested portion increased from 7.17 acres to 7.80 acres and the emergent portion decreased from 1.09 acres to 0.12 acre. The Draft Wetland Report documented 3.50 acres of forested wetland impact and 1.09 acres of emergent wetland impact for Alternative A and the DEIS Preferred Alternative, and 4.32 acres of scrub-shrub wetland impact for Alternative B. The construction limits impacts are now 3.88 acres of forested impact and 0.12 acres of emergent wetland impact for Alternative A and the DEIS Preferred Alternative, 4.11 acres of scrub-shrub wetland impact for Alternative B, and 3.92 acres of forested wetland and 0.12 acre of emergent wetland for the Refined Preferred Alternative.

*Sec2-W64 (polygons 64, 65, 66 and 66A)*

This 1.01 acre complex consists of emergent and scrub/shrub wetland polygons located on a reclaimed mine site that is currently actively cultivated. Presence of invasive exotics and severe disturbance, including ditching give polygons 64 and 65 a poor rating for all InWRAP qualifiers. Polygons 66 and 66A are comprised of an area of shallow open water with a bordering scrub-carr wetland and a shallow marsh fringe. The herbaceous layer includes native grasses as well as the invasive reed canary grass. Hydrology within this resource is depressional. Overall these polygons score poor for most functions, however due to the presence of reed canary grass in the herbaceous layer, and fairly low diversity, the emergent portion of the resource scored poor for botanical measures. Connection to Prides Creek via an intermittent creek makes this complex jurisdictional under USACE and IDEM regulations. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. The acreage of the scrub-shrub portion of this complex has decreased from 2.0 acres to 0.58 acre; the emergent portion of this complex has increased slightly from 0.62 acre to 0.43 acre. The Draft Wetland Report documented 0.11 acres of scrub-shrub impact for Alternative A and the DEIS Preferred Alternative, and 0.18 acre of scrub-shrub impact and 0.01 acre of emergent wetland for Alternative B. The construction limits impacts are 0.06 acre of scrub-shrub impact and 0.15 acre of emergent wetland impact for Alternative A and the DEIS Preferred Alternative, 0.16 acre of scrub-shrub impact for Alternative B, and 0.07 acre of impact to scrub-shrub wetland and 0.15 acre of emergent wetland for the Refined Preferred Alternative.

*Sec2-W76 (polygons 76 and 76A)*

This 4.47 acre complex consists of fingerlike projections of wetland within a cultivated agricultural field. Vegetative cover is dense, providing a closed canopy throughout most of the resource area (polygon 76). A ditch runs through the forested wetland, becoming heavily dissected to the north. As the channel becomes more pronounced, wetland plants become sparser, and upland communities become more dominant. Willow and ash were common throughout the complex, and herbaceous cover was dominated by jewelweed. Within the small scrub-carr area (polygon 76A) grasses, sedges and rushes such as *Juncus effusus* became more dominant. Both community types scored similarly for InWRAP functions. The forested component was found to have fair animal habitat value due to scattered ground cover and areas of open water. Plant species diversity within the system was relatively low and therefore the wetland scored fair/poor for botanical measures. Finally, hydrological function was considered fair due to presence of sufficient vegetation to uptake nutrients and slow water. This complex is under both USACE and IDEM jurisdiction due to its hydrologic connection with a Lick Creek tributary. Alternatives A, DEIS Preferred and the Refined Preferred would not impact this wetland complex. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 1.66 acres of forested impacts and 0.46 acres of scrub shrub wetland impacts for Alternative B. The construction limits impacts are now 1.56 acres of forested wetland impacts and 0.44 acre of scrub-shrub wetland impacts for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid this wetland complex.

*Sec2-W80 (polygon 80)*

This 0.28 acre isolated deep marsh is located within an actively cultivated agricultural field. The central portion supports *Lemna* sp. while the wetland fringe consists of a ring of cattail on the inner zone and soft rush and Indian hemp on the outer edge. The InWRAP evaluation ranks this resource area as poor for animal habitat, but good for botanical measures and fair for hydrologic measures. During field observation it was noted that this area was densely populated with birds and various frogs. Due to its hydrologic isolation within the landscape, this resource does not fall under the jurisdiction of the USACE, but would be regulated by IDEM. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland has been refined since the publication of the DEIS. These refinements were due to additional field work. The overall acreage of this aquatic bed increased slightly from 0.27 acre to 0.28 acre. The Draft Wetland Report documented 0.19 acre of impact for Alternative A and the DEIS Preferred Alternative, and 0.04 acre for Alternative B. It was determined that this wetland could potentially lose its hydrology due to any impact. As a result, the construction limits impacts are now 0.28 acre for each of the Alternatives.

*Sec2-W80A (polygons 80A, 80B, 80C and 80D)*

This complex is 8.91 acres and consists two swamp forest polygons (polygon 80B and 80C) and two shallow marsh polygons (polygon 80A and 80D) associated with a tributary to Lick Creek. Hydrology for polygons 80A and 80B appears to be supported by a seep from the adjacent hillside. Vegetation within the emergent marshes includes cattails and jewelweed with willow saplings. Red maple and ash dominate the trees in the forested sections, as is typical of wetland forests throughout the project corridor. This wetland resource is not mapped as an NWI wetland. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic connection with a Lick Creek tributary. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. This wetland complex was found to be much larger than originally anticipated. The total acreage for the emergent polygons increased from 0.43 acres to 2.11 acres and the forested polygons increased from 0.63 acre to 6.80 acres. The Draft Wetland Report documented 0.43 acre of emergent impact and 0.60 acre of forested impact for Alternative A and the DEIS Preferred, and Alternative B impacted 0.63 acre of forested and 0.43 acre of emergent wetland. The construction limits impacts for the new delineated boundaries are 2.06 acres of emergent wetland impact and 4.61 acres of forested wetland impact for Alternative A and the DEIS Preferred Alternative, 2.06 acres of emergent wetland and 6.05 acres of forested wetland for Alternative B, and 1.99 acres of emergent wetland and 4.16 acres of forested wetland for the Refined Preferred Alternative.

*Sec2-W89 (polygon 89)*

This 0.78 acre shallow marsh wetland is located on a formerly mined site. It consists of a small area of open water and a shallow marsh fringe that stretches up along a ditch. The dominant plant within the resource is the highly invasive *Phragmites australis*. InWRAP ranks the wildlife habitat and botanical measures as poor, with the hydrology ranked as fair. Due to its location at the bottom of a steep slope and reception of runoff from the mining site, this resource ranks good for hydrologic functionality. The area is highly disturbed and is considered hydrologically isolated; therefore it does not fall under the jurisdiction of the USACE, but would be regulated by IDEM. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft wetland report documented 0.30 acre of emergent wetland impacts for Alternative B. The construction limits impacts are now 0.27 acres of emergent wetland impact for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid this wetland.

*Sec 2 W94 (polygon 94)*

This 26.69 acre forested wetland originally included in the DEIS was re-evaluated in 2009. It was determined that at least the portion of the original polygon boundary that was within the right-of-way of

the alternatives did not meet all of the wetland criteria. It has therefore been removed from the listing of wetlands affected by any of the proposed alternatives.

*Sec 2 W95A (polygon 95A)*

This is a 1.05 acre narrow swamp forest wetland associated with a small ephemeral stream. The stream flows between a cultivated parcel to the north and a grassy mowed parcel associated with a residence to the south. Wetland plants within this resource include red maple, dogwood, and manna grass. Due to the proximity of disturbance in the surrounding landscape and the narrow nature of the wetland, it does not score high for any assessed quality and only ranks fair for wildlife measures. The sparse understory and position in the landscape result in a poor quality assessment for hydrology measures. This resource is not on the NWI mapping, and was located during field delineation efforts in July 2009, after publication of the DEIS. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic connection with a Mud Creek tributary. The construction limits impacts are now 0.70 acres for Alternative A and the DEIS Preferred Alternative, and 0.20 acre for the Refined Preferred Alternative. Alternative B would avoid this wetland.

*Sec2-W115 (polygons 115 and 116)*

This small 0.69 acre depressional wetland complex is located within an actively cultivated corn field and consists of a 0.61 acre wet meadow component and a 0.08 acre scrub-carr component. During summer field investigations, this wetland was completely obscured by the fields of corn surrounding it. During a winter field investigation, the area was observed to be dominated by smartweed and reed canary grass. Water plantain and *Eleocharis* sp. were also observed growing within the site. A small stand of young willows is located on the southern fringe. Its location in the landscape resulted in a fair hydrology ranking, as this wetland aids in uptake of runoff from the adjacent agricultural use. However, its isolation from other plant communities and low plant diversity result in poor scores for habitat and botanical measures. Due to its location within the East Fork White River floodplain, this complex falls under the jurisdiction of the USACE and IDEM. This resource area would only be impacted by Alternative B by 0.59 acre. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 0.08 acre of scrub-shrub impact and 0.53 acre of emergent wetland impact for Alternative B. The construction limits impacts are now 0.08 acre of scrub-shrub wetland and 0.51 acre of emergent wetland for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid this wetland.

*Sec2-W117 (polygon 117)*

This 4.66 acre swamp forest wetland shows signs of receiving large amounts of runoff from the surrounding corn field (old corn husks piled in drift lines). This resource is depressional in nature but has a hydrologic outlet. Vegetation within the herbaceous layer is scattered throughout and the upper canopy is more or less closed. Woody debris is frequent throughout and provides for habitat within the resource. Due to its hydrologic connectivity with the East Fork White River this wetland falls under the jurisdiction of USACE and IDEM. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The total acreage of this wetland has been revised from the 4.7 acres in the Draft Wetland Report to 4.66 acres. The Draft Wetland Report documented a 1.73 acre impact for Alternative B. The construction limits impacts are now 1.63 acres for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid this wetland.

*Sec2-W118 (polygon 118/119)*

This site consists of a very large 231 acre forested wetland within the East Fork White River floodplain with channelized flows throughout. In some areas the channel is heavily dissected and in other areas it is no more than a ditch and is shallow enough to step over. Areas at the top of the bank show signs of flooding. Trees dominating the upper canopy include oak, ash and maple. Aster and poison ivy are

common in the understory, as is *Carex intumescens*. Lizard tail and button bush were also observed to be common within the wetland. Dense overstory and woody debris provide for good quality habitat. The entire InWRAP assessment area displays similar functionality. Wildlife habitat is good throughout due to the presence of standing water and the closed tree canopy as protective cover. Botanical measures are also regarded as good. Hydrology functions were found to be fair for this wetland. This wetland is under the jurisdiction of both USACE and IDEM due to its direct hydrologic connection to Jackson Pond and Aikman Creek within the East Fork White River floodplain. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. These refinements were due to additional field work. The portion of the wetland within the potential area of impact for the alternatives has been redefined. However, the Draft Wetland Report documented 4.02 acres of forested impact for Alternative A and the DEIS Preferred Alternative and 1.25 acres of impact for Alternative B. The construction limits impacts are now 2.37 acres for Alternative A and the DEIS Preferred and 1.18 acres of impact for Alternative B.

*Sec2-W120 (polygons 120, 120A and 120B)*

This 3.10 acre depressional scrub-shrub and emergent complex wetland is located within an actively cultivated field. Three areas of this complex were identified. Polygon 120 is characterized as a scrub-carr and is dominated by willows. Polygon 120A is classified as an sedge meadow wetland, predominantly vegetated with various sedges and dock. Polygon 120B is a mixture of willow dominated scrub/shrub and wet meadow dominated by goldenrods (*Solidago spp.*). The InWRAP summary suggests that the wetland provides poor wildlife habitat. This is based on its isolated nature, lack of standing water and small size. The resource ranks fair for plant diversity and hydrology, particularly for flood storage as it collects storm water from the surrounding landscape. This site experiences no direct channel connection to the East Fork White River or any of its tributaries; however, due to its location within the East Fork White River floodplain, it is determined to fall under the jurisdiction of the USACE and IDEM. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 0.68 acre of scrub-shrub impact and 0.50 acre of emergent wetland impact for Alternative B. The construction limits impacts are now 0.59 acre of scrub-shrub impact and 0.48 acre of impact to emergent wetlands for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this wetland.

*Sec2-W166 (polygon 166)*

This 0.23 acre sedge meadow wetland is located within an old field and has been previously mowed. Vegetation within the resource is predominantly stunted sedges and rushes. Wetland functionality is low for all categories because of this disturbance. This site is considered isolated and therefore does not fall under the authority of the USACE, but would be regulated by IDEM. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 0.10 acre of emergent impact for Alternative B. The construction limits impacts are now 0.08 acre for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this wetland.

*Sec2-W166A (polygon 166A)*

This 0.58 acre shallow marsh wetland is comprised of a natural spring flowing from a forested area and ponding along a narrow dirt roadway. Much of the resource is dominated by reed canary grass. However, the inner portion of the wetland located where the spring pools next to the road is classified as aquatic bed. Duckweed was observed within this resource during the summer field investigations. An outlet pipe was observed in the wetland, which is presumed to connect with a nearby surface water tributary of Veale Creek. Within the project area, this was the only occurrence of a natural spring and therefore is considered a locally significant resource. The wetland is determined to be under USACE and IDEM jurisdiction. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented that the entire 0.58

acre would be impacted by Alternative B. The construction limits impacts are also 0.58 acre for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this wetland.

*Sec2-W176 (polygon 176)*

The Draft Wetland Report documented this site as a 1.81 acre shallow marsh wetland. During the June 2009 field delineation, this site was observed to have been vegetated with predominantly upland plant species. The change in vegetative community indicates that this resource is not supporting hydrology sufficient to maintain a hydrophytic plant community. Therefore, due to the lack of hydrophytic plants, and lack of indicators of hydrology, this resource area is no longer considered to be a wetland under the USACE definition.

*Sec2-W176A (polygon 176A)*

This 3.94 acre sedge meadow wetland is located immediately adjacent to Hurricane Branch. Vegetation is dense and is comprised of sedges, rushes and scattered elderberry bushes. The site received an InWRAP summary ranking of fair for hydrological function based on flood attenuation and storage qualities. This site is under USACE and IDEM jurisdiction based on its immediate adjacency and hydrologic connection to Hurricane Branch. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. The overall wetland has increased from 3.74 acres to 3.94 acres. These refinements were due to additional field work. The Draft Wetland Report documented 0.61 acre of emergent impact for Alternative A and the DEIS Preferred Alternative, and 1.64 acres of emergent impact for Alternative B. The construction limits impacts are now 1.29 acres for Alternative A and the DEIS Preferred Alternative, and 1.52 acres of impact to Alternative B. The Refined Preferred Alternative would impact 0.64 acre of this wetland.

*Sec2-W178 (polygons 178, 178A, 178B, 179 and 179A)*

This large 27.83 acre wetland complex is comprised of multiple swamp forest and sedge meadow polygon wetlands typical of floodplain environments throughout the corridor. Polygons 178, 179 and 179A are classified as swamp forest, and polygons 178A and 178B are sedge meadow wetlands. The forested portion of this complex has a sparse understory due to the closed canopy of red maple and green ash above it. Herbaceous vegetation was found to be typical of wetland forested areas and included false nettle and jewel weed as well as sedges and grasses. Due to its location within the floodplain, this wetland complex is consistently ranked good for hydrologic functions. This complex is considered to be under the jurisdiction of the USACE and IDEM by virtue of its direct hydrologic association with Hurricane Branch. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. The overall acreage has changed from 19.30 acres of forest wetland, 4.49 acres of scrub-shrub wetland, and 3.37 acres of emergent wetland to 21.72 acres of forested wetland and 6.11 acres of emergent wetland. The Draft Wetland Report documented 0.12 acres of emergent and 0.44 acre of scrub-shrub impact for Alternative A and the DEIS Preferred Alternative and 2.95 acres of emergent wetland impact, 2.31 acres of scrub-shrub wetland impact, and 3.53 acres of forested wetland impact for Alternative B. The construction limits impacts are now 0.26 acre of emergent wetland impact and 0.67 acre of forested impact for Alternative A and the DEIS Preferred Alternative and 4.34 acres of emergent wetland impact and 3.85 acres of forested wetland impact for Alternative B. The Refined Preferred Alternative would impact 0.64 acre of forested wetland and 0.18 acre of emergent wetland.

*Sec2-W186 (polygon 186)*

This small 0.80 acre depressional sedge meadow wetland is located within an actively cultivated soy bean field. Vegetation within the resource consists of sedges and grasses interspersed with soy bean plants. All functions examined through the InWRAP protocol were given a rating of poor due to the resource's disturbed nature and location within the landscape. This site is under the jurisdiction of USACE and

IDEM due to its hydrologic connection with Hurricane Branch. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. The Draft Wetland Report documented 0.44 acre of emergent impact for Alternative B. The construction limits impacts are now 0.42 acres for Alternative B. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid this wetland.

*Sec2-W189 (polygon 189)*

This 0.92 acre sedge meadow is located within a roadside ditch dense with cattails. Vegetation within the resource also includes invasive plants species *Phalaris arundinacea* and *Phragmites australis*. It receives runoff from the adjacent roadways (including US 50) and flows into a tributary of Hurricane Branch. Due to the channelized nature of the resource and surrounding land use, the site scored low for animal habitat and botanical ratings, but was found to provide fair hydrological function. This wetland is considered to be under USACE and IDEM jurisdiction due to its contiguous connection with natural stream channels (unnamed tributary of Hurricane Branch) to the south. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. The acreage has increased from 0.53 acre to 0.92 acre. The Draft Wetland Report documented 0.06 acre of impact for Alternative A and the DEIS Preferred Alternative, and 0.49 acre of emergent impact for Alternative B. The construction limits impacts are now 0.15 acre for Alternative A and DEIS Preferred Alternative, 0.81 acre for Alternative B, and 0.60 acre for the Refined Preferred Alternative.

*Sec2-W190 (polygon 190 and 190PSS)*

This 0.56 acre shallow marsh and scrub-carr complex is located southeast of SR57, and would be impacted by the proposed North Pike Interchange, near SR57 and Blackburn Road. It is primarily dominated by graminoids such as reed canary (*Phalaris arundinacea*) and *Eleocharis* sp. Shrub species within the wetland are predominantly small willows (*Salix* sp.) with some occurrences of elm and ash. The wetland is located in an isolated depression at the base of a steep hill. The wetland receives runoff from industrial activities (trucking storage area) located at the top of the hill; however, it is not hydrologically connected to another wetland or waterway. For this reason, this site is not considered to be under USACE jurisdiction, but would be subject to IDEM regulatory authority. The right-of-way impact was presented in the Section 2 Revised DEIS and the construction limit impacts are now presented. This wetland complex has been refined since the publication of the DEIS. This wetland complex originally was just 0.51 acres of emergent wetland, it now includes 0.10 acre of emergent wetland and 0.46 acre of scrub-shrub wetland. The Draft Wetland Report documented 0.17 acre of impact for Alternative A and the DEIS Preferred Alternative, and 0.37 acre for Alternative B. Because the project impacts would result in loss of the majority of this isolated resource area, the remaining portions of the wetland are not anticipated to continue to function as wetlands, therefore the impacts for Alternative A, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative are 0.56 acre.

*Sec 2 – W190B (polygon 190B)*

This 0.05 acre resource consists of an isolated depressional wetland with open water and a swamp forest wetland fringe. Low plant diversity results in a poor botanical rating for this resource. The sparse understory and position in the landscape result in a fair rating for this wetland for hydrological function. This resource is isolated and therefore determined to be only under IDEM jurisdiction. This wetland has been added since the publication of the DEIS due to additional field work. The proposed reconfiguration of the intersection of Blackburn Road and SR57 would result in construction limit impacts of 0.05 acres for Alternative A, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative.

*Sec2-W190C (polygon 190C)*

This 0.09 acre scrub-carr wetland complex is comprised of a depressional resource located in a wooded area. The center of the resource appears to flood seasonally as evidenced by the sparse herbaceous layer and saturated, hydrogen sulfide smelling soils. Due to its position in the landscape this resource scores fair for wildlife habitat measure and good for hydrology function. The shrub layer is dominated by green ash and silver maple. The lack of plant diversity and richness results in a poor botanical measure for the wetland. This resource is isolated and therefore determined to be only under IDEM jurisdiction. This wetland has been added since the publication of the DEIS due to additional field work. The construction limits impacts to the wetland would be 0.03 acre for Alternative A, Alternative B and the DEIS Preferred Alternatives. Due to the realignment of the Blackburn Road intersection with SR57, the impacts for the Refined Preferred Alternative would be 0.02 acre.

*Sec2-W192 (polygon 192)*

This 0.36 acre floodplain forest wetland is located adjacent to CR 275E and is associated with an unnamed ephemeral stream of Mud Creek. The site has fair animal habitat and hydrology measures, but is considered poor botanically due to limited diversity. The canopy consists primarily of red maple and silver maple, and generally lacks a shrub layer. At the time of the site visit, woodreed grass was the prominent ground cover, although ground cover was very sparse. This wetland is considered to be under USACE and IDEM jurisdiction due to its adjacency to an ephemeral stream that is connected to Mud Creek to the north. This wetland has been added since the publication of the DEIS due to additional field work. The connector road from the North Pike Interchange for the Refined Preferred Alternative would impact 0.09 acre of this wetland. Alternative A, Alternative B and the DEIS Preferred Alternative would

**Ponds**

The following provides a narrative description of each pond that would be impacted by the proposed construction limits of the Refined Preferred Alternative as well as Alternatives A, B and the DEIS Preferred Alternative. Since the publication of the Draft Environmental Impact Statement several changes have been made to the pond assessment. Overall pond areas and impact calculations used for the DEIS were based on NWI boundaries. Additional field work completed since the DEIS was used to further refined the pond boundaries.

*Sec2-W28*

This pond has been removed due to field work since the publication of the DEIS which revealed that the pond does not exist.

*Sec 2-W33*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. Based on the revised boundary, it is no longer being impacted by Alternative B as documented in the Draft Wetland Report.

*Sec2-W35*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was not documented as an impact in the Draft Wetland Report. The entire 0.86 acre is now impacted by Alternative A, Alternative B and the DEIS Preferred Alternative. The Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W49*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The acreage of the pond is now 0.39 acre. The impact for Alternative B has increased from the 0.24 acre documented in the Draft Wetland Report to include the entire 0.39 acre due to the possibility that the hydrology will be lost. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W56*

The pond location and/or boundary has not changed since the publication of the DEIS. Alternatives A, the DEIS Preferred Alternative and the Refined Preferred Alternative would each impact the entire 0.31 acre. Alternative B would avoid impacts to this pond.

*Sec2-W58*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work which indicated that this pond is 0.19 acre and not 1.33 acre as documented in the Draft Wetland Report. Based on the revised boundary it is no longer impacted by Alternative A.

*Sec 2-W68*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work which indicated that this pond is 0.39 acre and not 0.55 acre as documented in the Draft Wetland Report. Based on the revised boundary it is no longer impacted by Alternative A.

*Sec2-W79*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. Based on the revised boundary it is no longer impacted by Alternative A.

*Sec2-W82*

This pond location and/or boundary has not changed since the publication of the DEIS. However; the entire 0.64 acre pond is now being included as an impact for Alternative B compared to the 0.06 acre documented in the Draft Wetland Report.

*Sec 2-W83*

This pond location and/or boundary has not changed since the publication of the DEIS. However; the entire 0.81 acre pond is now being included as an impact for Alternative B compared to the 0.59 acre documented in the Draft Wetland Report.

*Sec2-W86*

This pond location and/or boundary has not changed since the publication of the DEIS. However; the entire 0.17 acre pond is now being included as an impact for Alternative B compared to the 0.07 acre of impact documented in the Draft Wetland Report.

*Sec2-W90*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.19 acre and not 0.38 acre as reported in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.19 acre pond.

*Sec2-W125*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.06 acre and not 0.25 acre as reported in the Draft Wetland Report. Alternative A and the DEIS Preferred Alternative would impact the entire 0.06 acre pond.

*Sec2-W130*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond is no longer impacted by Alternative B as indicated in the Draft Wetland Report.

*Sec2-W131*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The impact for Alternative B has increased from 0.10 acre documented in the Draft Wetland Report to 1.77 acres to include the entire pond due to the possibility of hydrology loss. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W132*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The impact for Alternative A, Alternative B and the DEIS Preferred Alternative would include the entire 0.58 acre due to the possibility that the hydrology will be lost. The Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W133*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.08 acre and not 0.21 acre as reported in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.08 acre pond. Alternative B would avoid impacts to this pond.

*Sec2-W134*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.15 acre and not 0.26 acre as reported in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.08 acre pond due to the possibility of hydrology loss. Alternative B would avoid impacts to this pond.

*Sec2-W134A*

The pond location and/or boundary of this pond has not changed since the publication of the DEIS. Alternatives A, the DEIS Preferred Alternative and the Refined Preferred Alternative would each impact the entire 0.23 acre, Alternative B would avoid impacts to this pond.

*Sec2-W135*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.43 acre and not 0.45 acre as reported in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.43 acre pond due to the possibility of hydrology loss.

*Sec2-W137*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was found to be 0.22 acre and not 0.25 acre as reported in the Draft Wetland Report. Alternative B would impact the entire 0.22 acre compared to the 0.10 acre documented in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W142*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. This pond was not included in the Draft Wetland Report because none of the alternatives under investigation were to impact the site. This pond was found to be 0.63 acre. The Refined Preferred Alternative would impact the entire 0.63 acre due to the possibility of hydrology loss. Alternative A, Alternative B and the DEIS Preferred Alternative would avoid impacts to this pond.

*Sec2-W147*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.44 acre and not 0.42 acre as reported in the Draft Wetland Report. Alternative B would impact the entire 0.44 acre compared to the 0.01 acre documented in the Draft Wetland Report due to the possibility of hydrology loss. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would avoid impacts to this pond.

*Sec2-W152*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.71 acre and not 0.49 acre as reported in the Draft Wetland Report. Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.71 acre compared to the 0.49 acre documented in the Draft Wetland Report. Alternative B would also impact the entire 0.71 acre compared to the 0.40 acre documented in the Draft Wetland Report.

*Sec2-W153*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.33 acre and not 0.38 acre as reported in the Draft Wetland Report. The Draft Wetland Report indicated that Alternative A would impact 0.01 acre. Based on the revised boundary it is no longer impacted by Alternative A.

*Sec2-W157*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.38 acre and not 0.30 acre as reported in the Draft Wetland Report. The Draft Wetland Report indicated that Alternative B and the DEIS Preferred Alternative would impact 0.01 acre. Based on the revised boundary, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.38 acre due to the possibility of it losing its hydrology.

*Sec2-W159*

The Draft Wetland Report inadvertently documented the Alternative A impacts for this pond as 0.17 acre, when in actuality it is 0.17 hectare, or 0.43 acre. The boundary and location of the pond were not revised, so the Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact 0.43 acre due to the possibility of it losing its hydrology. Alternative B would avoid impacts to this pond.

*Sec2-W160*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.36 acre and not 0.42 acre as reported in the Draft Wetland Report. The Draft Wetland Report indicated that Alternative A would impact 0.17 acre and Alternative B would impact 0.34 acre. Based on the revised boundary, Alternative A, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.36 acre due to the potential loss of its hydrology.

*Sec2-W167*

The pond location and/or boundary has been refined since the publication of the DEIS due to additional field work. The pond was found to be 0.61 acre and not 0.50 acre as reported in the Draft Wetland Report. The Draft Wetland Report indicated that Alternative A would impact 0.50 acre. Based on the revised boundary, Alternative A, the DEIS Preferred Alternative and the Refined Preferred Alternative would impact the entire 0.36 acre due to the potential loss of its hydrology. Alternative B would avoid impacts to this pond.

*Sec2-190A*

This pond is no longer impacted by Alternative A as documented in the Draft Wetland Report because the construction limits of the alternative do not encroach upon the resource.

**Farmed Wetlands**

Employing the NRCS criteria for the determination of “farmed wetlands”, the FSA slides reviewed for the proposed alternatives did not disclose any locations where the required hydrology signatures were met. It is therefore concluded that no farmed wetlands are present in the I-69 Section 2 corridor within Gibson, Pike, or Daviess counties.

**Project Impacts**

Construction of the Refined Preferred Alternative would involve direct impacts to Section 404/401 jurisdictional wetlands, as well as isolated features subject to IDEM authority. Collectively, 28 wetland complexes (each comprised on one or more community type polygons) are located within the proposed alignment and interchanges for Alternative A, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative. Twenty-two (22) of these complexes were assessed as Waters of the U.S. subject to USACE jurisdiction. The remaining six (6) were determined to be “isolated” and therefore considered to be Waters of the State under the jurisdiction of IDEM only. The total impact to wetlands (excluding PUB ponds) due to construction of the Refined Preferred Alternative would be 23.98 acres. Of these, 23.07 acres are Waters of the US under USACE jurisdiction and the remaining 0.91 acres involve impacts to resources solely under IDEM jurisdiction. Alternative A would result in impacts to 25.21 acres of wetlands (excluding PUB ponds), 24.29 acres of which are Waters of the US under USACE jurisdiction, with the remaining 0.92 acre solely under IDEM jurisdiction. Alternative B would result in impacts to 48.37 acres of wetlands (excluding PUB ponds), 47.10 acres of which are Waters of the US under USACE jurisdiction, with the remaining 1.27 acres solely under IDEM jurisdiction. The DEIS Preferred Alternative would result in impacts to 25.21 acres of wetlands (excluding PUB ponds), 24.29 acres of which are Waters of the US under USACE jurisdiction, with the remaining 0.92 acre solely under IDEM jurisdiction.

A total of 24 palustrine unconsolidated bottom (PUB) features (i.e., ponds) were also located within the collective limits of the four alternatives. For determining pond acreage impacts in this assessment, if any portion of the pond was impacted, the entire acreage of the pond was considered an impact due to the possibility of loss of hydrology. The Refined Preferred Alternative, including all interchanges local access roads and cross roads, would impact 15 ponds with a collective total of 4.91 acres. Alternative A would impact 14 ponds with a total area of 5.10 acres. Alternative B would impact 14 ponds with a total of 7.67 acres. The DEIS Preferred Alternative would impact 15 ponds with a total of 5.29 acres. One (1) pond (Sec2-W152) appears to have been formed by impoundment of a Waters of the U.S. and would therefore be considered Section 404/401 jurisdictional. Sec2-W152 would be impacted by each of the four alternatives. The remaining pond sites are considered to be isolated Waters of the State, some or all of which may qualify as “exempt isolated wetlands”.

Tables 3-6 document the anticipated impacts for Alternative A, Alternative B, the DEIS Preferred Alternative and the Refined Preferred Alternative by subsection, and resource type. In locations where wetlands of different type are located within a single wetland complex, they are assessed according to wetland type. Refer to the matrix table in Appendix D for a summary of key characteristics, jurisdictional status, functions and values ratings, and area of impact for each wetland affected by the Refined Preferred Alternative.

**Impact Avoidance and Minimization**

Many impacts to high quality wetlands were avoided during the Tier 1 study of the area and in the selection of the location of the preferred corridor. This initial study committed to bridging the floodplain of Flat Creek and the Patoka River, thereby greatly reducing the impacts to these high quality areas. A shift in the corridor during the Tier 1 analysis also reduced impacts to the wetlands associated with Pride's Creek.

The Tier 2 layout of specific alignments within the corridor has allowed for further avoidance and minimization to wetlands within the corridor. Alternatives A and B were initially laid out within the project corridor with avoidance of wetlands being one of the driving design considerations. Where possible, large wetland complexes were avoided and crossings were made to minimize impacts.

Once the A and B Alternative Alignments were laid out, the DEIS Preferred Alternative was developed by combining sections of each alternative that provided for the best avoidance of sensitive resources within each subsection of the corridor. This allowed for a new alignment that provided the greatest level of avoidance. The Preferred Alternative alignment was selected and then refined further by modifying side slopes, interchange layouts and cul de sacs to further minimize impacts to wetlands and other resources. The Refined Preferred Alternative represents the alignment with the greatest potential for avoidance while still meeting the project purpose and need.

## 5 Summary

A total of 28 wetland complexes, excluding those complexes that include only ponds, occur within one or more of the Alternatives within the project corridor. Twenty-two (22) are considered to be Waters of the U.S., while the remaining six (6) are regarded as only Waters of the State. A total of 24 ponds occur within one of more of the Alternatives within the project corridor, only one of which is considered to be a Waters of the U.S. One pond is located within a complex (W190B) associated with a forested wetlands.

Alternative A would impact 18 wetland complexes (30 community type polygons) totaling 25.21 acres and fourteen (14) open water ponds totaling 5.10 acres. The palustrine forest type comprised the majority (68%) of the total wetland area (excludes ponds) that would be impacted.

Alternative B would impact 26 wetland complexes (42 community type polygons) totaling 48.37 acres and fourteen (14) open water ponds totaling 7.67 acres. The palustrine forest type comprised the majority (54%) of the total wetland area (excludes ponds) that would be impacted.

The DEIS Preferred Alternative would impact 18 wetland complexes (30 community type polygons) totaling 25.21 acres and fifteen (15) ponds totaling 5.29 acres. The palustrine forest type comprises 68% of the total wetland area impacted (excludes ponds). The Refined Preferred Alternative would impact 18 wetland complexes (30 community type polygons) totaling 23.98 acres and fifteen (15) ponds totaling 4.91 acres. The palustrine forest type comprises 67% of the total wetland area impacted (excludes ponds).

For each alternative, a summary of wetland impacts by resource type and jurisdiction is shown in Table 7. InWRAP wetland quality assessments indicated that forested wetlands most often scored good or fair for animal habitat, botanical and hydrologic measures. Emergent shallow marshes in disturbed, agricultural settings most often scored poor for one or more of the three InWRAP measures.

Alternative	PUB (acres)		PAB (acres)		PEM (acres)		PSS (acres)		PFO (acres)		Total (acres)	
	Waters of the U.S.	Waters of the State										
Alternative A	0.71	5.10	0.39	0.67	6.68	6.78	0.06	0.55	17.16	17.21	25.00	30.31
Alternative B	0.71	7.67	0.40	0.68	13.37	13.82	7.43	7.92	25.90	25.95	47.81	56.04
DEIS Preferred Alternative	0.71	5.29	0.39	0.67	6.68	6.78	0.06	0.55	17.16	17.21	25.00	30.50
Refined Preferred Alternative	0.71	4.91	0.40	0.68	6.52	6.62	0.07	0.55	16.08	16.13	23.78	28.89

The Waters of the State column includes both Waters of the U.S. and non-exempt isolated wetlands/ponds under IDEM authority. As such, the difference between the acreage reported for the Waters of the State and the acreage reported for the Waters of the U.S. for each alternative and each wetland class, represents the acreage that is only under IDEM authority.

Site Location on Francisco USGS Quadrangle

Site Location on 2008 Aerial Photograph

**Aquatic Resource:** Wetland  
**Type:** Forested  
**Quarter:** SW  
**Range:** R9W  
**Watershed:** East Fork Keg Creek

**USGS Quadrangle:** Francisco  
**Section:** 15  
**Township:** T2S  
**USCOE Jurisdiction:** Yes  
**IDEM Jurisdiction:** Yes

Wetland Sec2-W4						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
4	Swamp Forest	0.03	A	Fair	Fair	Good
		5.05	B			
		0.03	DEIS Preferred			
		0	Refined Preferred			

**Description of Potential Impact:** The Preferred Alternative was refined to avoid any impact to this wetland. Alternative B would impact approximately 5.05 acres of this 10.83 acre depressional wetland. Alternative A would have a much smaller (0.03 acre) impact on this resource. The area showed 95 – 100% vegetative cover. Red maple, ash and elm are found throughout the polygon both as mature trees and as saplings. Herbaceous ground cover includes species such as fowl manna grass, jewelweed, and poison ivy. Hydrology is likely due to its depressional nature, local runoff, and poorly drained soils. Animal habitat and botanical diversity are both ranked fair under InWRAP summaries for the site. Although this site is typical of forested wetlands found throughout the project area, it is likely that it plays an important role in flood storage and attenuation for the area, as it is one of very few wetlands locally. Its role in the landscape is

## Wetland Sec2-W4

---

therefore considered significant. This resource is regulated under USACE and IDEM jurisdiction due to its immediate adjacency to a tributary of East Fork Keg Creek.

Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
11	Floodplain Forest	0.09	A	Good	Fair	Good
		0.46	B			
		0.09	DEIS Preferred			
		0.06	Refined Preferred			

**Description of Potential Impact:** This 54.27 acre resource would be impacted under all alternatives. Alternative A would impact 0.09 acres of this resource, Alternative B would impact 0.46 acres and the DEIS Preferred would impact 0.09 acres. The Refined Preferred Alternative would result in impacts to 0.06 acres of this resource. The area is made up of a floodplain forest associated with Hurricane Creek. The tree canopy of red maple and ash is more or less closed and results in a sparse understory below. Herbaceous ground cover consists of scattered sedges and grasses, as well as poison ivy. This resource area rates high (good) for both hydrology, due to its floodplain location, and for wildlife habitat due to open water elements and good protective cover. This wetland complex falls under the jurisdiction of both the USACE and IDEM due to its hydrologic connectivity with the South Fork of the Patoka River.

Wetland Sec2-W15						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
15	Floodplain Forest	0.81	A	Fair	Fair	Fair
		0.69	B			
		0.81	DEIS Preferred			
		0.86	Refined Preferred			

**Description of Potential Impact:** This site consists of a 3.08 acre strip of forested wetland adjacent to a ditch. Alternative A would impact 0.81 acres, Alternative B would impact 0.69 acres and the DEIS would impact 0.81 acres of this resource. Impacts to this resource area would total 0.86 acres under the Refined Preferred Alternative. All Alternatives would impact less than one acre the resource, with Alternative B impacting slightly less than the other alternatives. This wetland is affected by ditching and is colonized by monostands of the invasive exotic reed canary grass. Poison ivy is also dominant in this degraded resource and a row of young silver maples is present on the upland border. The wetland exhibits fair wildlife habitat and provides only fair botanical measures due to the presence of reed canary grass and low plant diversity within the resource. This wetland falls under the jurisdiction of both the USACE and IDEM due to hydrologic connectivity with the South Fork Patoka River.

19/24	Deep Marsh	0.39	A.	Good	Fair	Good
		0.40	B			
		0.39	DEIS Preferred			
		0.40	Refined Preferred			

**Description of Potential Impact:** This 11.63 acre wetland complex lies within the Patoka National Wildlife Refuge, a large area of bottom land hardwood forest established as a refuge in 1994. Impacts to this complex include 3.34 acres for Alternative A, 3.3 acres for Alternative B, and 3.34 acres for the DEIS Preferred Alternative. The total impacts to this resource would be 3.4 acres for the Refined Preferred Alternative. Because of the narrow corridor through the Patoka refuge developed

## Wetland Sec2-W17

---

early in the project all of the Alternatives have similar routes through the resource and therefore have similar impacts.

Due to the uniqueness and local significance of this area, the project corridor crossing was established early on in the conceptual design and was located in this area due to existing surrounding disturbance and somewhat degraded nature of the resource area. The wetland complex in this area is made up of polygons 17/25 and 19/24. The floodplain forest resource associated with the old channel of the Patoka (polygon 17/25) consists of a bottomland forested resource dominated by silver maple and red maple with a sparse understory dominated by Gray's sedge and poison ivy.

Adjacent to this forested area is a deep marsh resource located in the old, natural channel of the Patoka River (polygon 19/24). Duckweed dominates the open water portion of this resource and button bush is scattered along the shallow edges. Both types of wetlands scored good for hydrologic function and wildlife habitat. The wetland complex also includes habitat for state listed species. The wetland complex is determined to be jurisdictional under both USCOE and IDEM regulations as a result of its direct connection with the Patoka River.

**IDEM Jurisdiction:** Yes

Wetland Sec2-W32						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Habitat Measure	Hydrology Measure
32	Swamp Forest	0.28	A	Good	Fair	Fair
		0.26	B			
		0.28	DEIS Preferred			
		0.29	Refined Preferred			
32A	Wet Meadow	2.65	A	Poor	Poor	Fair
		2.63	B			
		2.65	DEIS Preferred			
		2.84	Refined Preferred			

**Description of Potential Impact:** Polygons 32 and 32A form a 52.56 acre wetland complex located along a stream channel and partially within an old field. Alternative A would impact 2.93 acres, Alternative B would impact 2.89 acres, and the DEIS Preferred Alternative would impact 2.93 acres. The Refined Preferred Alternative would result in impacts to 3.13 acres of this resource. The swamp forest portion of this complex is dominated by green ash in the

## Wetland Sec2-W32

---

overstory and barnyard grass, jewel weed and beggars ticks in the herbaceous layer. The field delineated boundary of the resource was found to be much narrower than the NWI mapped resource area. The wetland forms a narrow fringe along the channelized stream and shows signs of flooding during periods of high water. At the proposed intersection, the stream channel is incised and does not have bordering wetland associated with it. The wet meadow wetland portion of this complex consists of a sedge meadow that has formed in a low lying area of an adjacent field. The field delineated wet meadow resource was found to be larger than shown on the NWI mapping. Sedges and rushes identified within this resource include *Juncus tenuis*, *Juncus acuminatus*, and *Eleocharis obtusa*. Both community types show signs of disturbance such as ditching within the forested system and prior cultivation of the meadow area. Although the wet meadow is small in size and occurs within an old field, it has a hydrologic connection to the forested area and is therefore considered part of the larger complex. The wetland complex is determined to be jurisdictional under both USACE and IDEM regulations due to its direct association with an unnamed tributary to the Patoka River.

## **Wetland Sec2-W37**

---

**Description of Potential Impact:** This 8.87 acre wetland complex consists of a swamp forest area and a scrub-carr separated by a narrow steep upland, and a shallow marsh wetland area bordering on forested wetlands. Only Alternative B impacts this complex. It is impacted by 3.86 acres. These resources are bounded by roadways and agricultural land. Ditching was observed within the wetland areas, as well as a culvert leading under the roadway. The forested wetland is dominated by red maple and green ash with jewelweed and false nettle in the understory. The scrub/shrub portion of the resource area has similar vegetation, but the trees are sapling size. Reed canary grass was observed scattered throughout the site, however was not frequent enough to be considered dominant. Due to the closed canopy, wood litter and protected nature of the forested resource it was considered to provide fair wildlife habitat. The emergent portion of the wetland complex is dominated by reed grass (*Phragmites australis*). The dense herbaceous layer and position in the landscape led to a good rating for hydrologic function, particularly for storm water attenuation and storage. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic association with a Flat Creek tributary.

## Wetland Sec2-W43

---

**Description of Potential Impact:** This 8.23 acre wetland complex is associated with Flat Creek and has been dissected by the railroad, the mine road and SR 57. Impacts to the entire complex would be 0.77 acres for Alternative A, 0.48 acres for Alternative B, 0.77 acres for the DEIS Preferred Alternative, and 0.93 acres for the Refined Preferred Alternative. The swamp forested wetland sections of this complex are dominated by red maple in the upper canopy and nettle and jewelweed in the herbaceous layer. Average plant diversity and sparse understory result in fair ratings for this complex for botanical and hydrological functions. INWRAP assessment for these resources indicates that despite the surrounding land use they provide some areas of good habitat for wildlife due to tree cover and maturity, presence of standing water, as well as areas of scattered woody material. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic connection to Flat Creek.

56A	Scrub-carr	0	A	Fair	Fair	Good
		4.11	B			
		0	DEIS Preferred			
		0	Refined Preferred			

**Description of Potential Impact:** This 22.07 acre wetland complex consists of 4 bordering wetland polygons that are interconnected under the roadway. Total impacts to the wetland complex will be 4 acres for Alternative A, 4.11 for Alternative B, 4 acres for the DEIS Preferred and 4.04 acres for the Refined Preferred Alternative. Polygon 55A is a swamp forest with pockets of standing water throughout, making this area considerably wetter than most forested resources found in the project area. Nettle, bent grass and moneywort were common throughout the polygon. A dense upper canopy of red maples as well as ponded water makes the herbaceous layer fairly sparse. The eastern edge of the forested wetland is bordered by a wet meadow wetland (polygon 55C) that is partially under cultivation. Polygon 55B is also forested, but is more typical of forested wetlands in the area in that it does not have standing water present and has an herbaceous layer that is marginally hydrophytic. Across the county road polygon 56A is a scrub-carr resource with dense sycamore and red maple saplings. It is likely that this location was formerly mined and is now recovering as a successional resource area. Due to the vernal pool like nature of polygon 55A with seasonal pockets of water throughout, this resource receives a fair rating for wildlife habitat and is considered locally significant due to its uniqueness in the surrounding landscape. The complex is determined to be both USACE and IDEM jurisdictional due to its direct hydrologic association with an unnamed tributary of Prides Creek.

		0.06	DEIS Preferred			
		0.07	Refined Preferred			

## Wetland Sec2-W64

66A	Shallow Marsh	0.15	A	Poor	Poor	Fair
		0	B			
		0.15	DEIS Preferred			
		0.15	Refined Preferred			

**Description of Potential Impact:** This 1.01 acre complex exists on a reclaimed mining site. Impacts to this complex would total 0.21 acres for Alternative A, 0.16 acres for Alternative B, 0.21 acres for the DEIS Preferred Alternative, and 0.22 acres for the Refined Preferred Alternative. Presence of invasive exotics and severe disturbance, including ditching give polygons 64 and 65 a poor rating for all InWRAP qualifiers. Polygons 66 and 66A are comprised of an area of shallow open water with a bordering scrub-carr wetland with a shallow marsh fringe. The herbaceous layer includes native grasses as well as the invasive reed canary grass. Hydrology within this resource is depressional. Overall these polygons score fair for most functions, however due to the presence of reed canary grass in the herbaceous layer, and fairly low diversity, the shallow marsh portion of the resource scored low for botanical measures. Connection to Prides Creek via an intermittent stream channel makes this wetland complex jurisdictional under USACE and IDEM regulations.

### Description of Potential Impact:

This 4.47 acre complex would only be impacted by Alternative B totaling 2.00 acres. It consists of fingerlike projections of wetland within a cultivated agricultural field. Vegetative cover is dense, providing a closed canopy throughout most of the resource area (polygon 76). A ditch runs through the swamp forested wetland, becoming heavily dissected to the north. As the

## Wetland Sec2-W76

---

channel becomes more pronounced, wetland plants become sparser, and upland communities become more dominant. Willow and ash were common throughout the complex, and herbaceous cover was dominated by jewelweed. Within the small scrub-carr polygon (76A) grasses, sedges and rushes such as *Juncus effusus* became more dominant. Both community types scored similarly for InWRAP functions. The forest component was found to have fair animal habitat due to scattered ground cover and areas of open water. Plant species diversity within the system was relatively low and therefore the wetland scored poor/fair for botanical measures. Finally, hydrological function was considered fair due to presence of sufficient vegetation to uptake nutrients and slow water. This system falls under both federal and state jurisdiction due to its connectivity and presence of hydric soils and plants. This complex is under both USACE and IDEM jurisdiction due to its hydrologic connection with a Lick Creek tributary.

**Township:** T1N  
**USCOE Jurisdiction:** No  
**IDEM Jurisdiction:** Yes

Wetland Sec2-W80						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
80	Deep Marsh	0.28	A	Poor	Good	Fair
		0.28	B			
		0.28	DEIS Preferred			
		0.28	Refined Preferred			

**Description of Potential Impact:** This 0.28 acre isolated deep marsh is located within an actively cultivated agricultural field. Although the entire polygon is not actually impacted, loss of the majority of the polygon would result in a very small and non functional wetland. Therefore the overall impact to this resource is considered the total acreage of the polygon 0.28 acres for all alternatives. The central portion of this site has floating aquatics such as *Lemna* sp. present, while the fringe consists of a ring of cattail on the inner zone and soft rush and Indian hemp on the outer edge. InWRAP evaluation ranks this resource area as poor for animal habitat, but good for botanical measures and faire for hydrologic measures. Although the InWRAP summary indicates a poor ranking for animal habitat, during field observation it was

## Wetland Sec2-W80

---

noted that this area was densely populated with red winged blackbirds and various frogs. It is the only resource of its kind in the vicinity and is likely to be locally significant. Due to its hydrologic isolation from other Waters of the U.S. in the landscape, this resource does not fall under the jurisdiction of the USACE, but would be subject to IDEM regulations.

80D	Shallow Marsh	0.18	A	Poor	Poor	Fair
		0.18	B			
		0.18	DEIS Preferred			
		0.11	Refined Preferred			

**Description of Potential Impact:** This complex totals 8.91 acres and consists of a shallow marsh (polygon 80A) bordering on a swamp forest (polygon 80B) and a swamp forest (polygon 80C) and a shallow marsh (polygon 80D) associated with a tributary to Lick Creek. This wetland complex would be impacted by the all four Alternatives due to the proposed North Pike

## Wetland Sec2-W80A

---

Interchange. Impacts would total 6.67 acres for Alternative A, 8.11 acres for Alternative B, 6.67 acres for the DEIS Preferred Alternative, and 6.15 acres for the Refined Preferred Alternative. Hydrology of polygons 80A and 80B appears to be supported by a seep from the adjacent hillside. Vegetation within the shallow marshes includes cat tails and jewel weed with willow saplings. Red maple and ash dominate the trees in the forested sections, as is typical of wetland forests throughout the project corridor. The wetland was field delineated in June of 2009 and found to be considerably larger than previously anticipated. This complex is under both USACE and IDEM jurisdiction due to its hydrologic connection with a Lick Creek tributary.

				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
89	Shallow Marsh	0	A	Poor	Poor	Fair
		0.27	B			
		0	DEIS Preferred			
		0	Refined Preferred			

### Description of Potential Impact:

This 0.78 acre shallow marsh wetland is located on a formerly mined site. Alternative B will impacted this resource 0.27 acre. It consists of a small area of open water and an emergent fringe that stretches up along a ditch. The dominant plant within the resource is the highly invasive *Phragmites australis*. InWRAP ranks the wildlife habitat and botanical measures as poor, with the hydrology ranked as fair. Due to it's location at the bottom of a steep slope and reception of runoff from the mining site, this resource ranks good for flood storage. The area is highly disturbed and is considered isolated in nature; therefore, it does not fall under the jurisdiction of the USACE.

**Range:** R7W  
**Watershed:** E Fork White River

**USGS Quadrangle:** Sandy Hook  
**Section:** S18  
**Township:** T1N  
**USCOE Jurisdiction:** Yes  
**IDEM Jurisdiction:** Yes

Wetland Sec2-W95A						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
95A	Floodplain Forest	0.7	A	Fair	Poor	Poor
		0	B			
		0.7	DEIS Preferred			
		0.2	Refined Preferred			

**Description of Potential Impact:** Wetland 95A is a 1.05 acre narrow floodplain forest wetland associated with a small ephemeral stream. Alternative A would impact 0.7 acres of this resource. Alternative B would not impact this resource. The DEIS Preferred Alternative would impact 0.7 acres. The Refined Preferred Alternative would impact 0.2 acres of this resource. This resource is not on the NWI mapping, and was located during the FEIS field delineation efforts in July 2009. The stream channel runs between a cultivated parcel to the north and a grassy mowed parcel associated with a residence to the south. Wetland plants within this resource include red maple, dogwood, and manna grass. Due to the proximity of disturbance in the surrounding landscape and the narrow nature of the wetland, it does not score high for any quality and only ranks fair for wildlife measures. The sparse understory and position in the landscape result in a

## **Wetland Sec2-W95A**

---

poor quality assessment for hydrology measures. This complex is determined to be under USACE and IDEM jurisdiction due to its hydrologic connection with a Mud Creek tributary.

116	Wet Meadow	0	A	Poor	Poor	Fair
		0.51	B			
		0	DEIS Preferred			
		0	Refined Preferred			

**Description of Potential Impact:** This complex is a small (0.69 acre) depressional wetland located within an actively cultivated corn field. This resource area would only be impacted by Alternative B by 0.59 acre. During summer field investigations, this wetland was completely obscured by the fields of corn surrounding it. During a winter field investigation, the area was observed to be dominated by smartweed and reed canary grass. Water plantain and *Eleocharis* sp. were also observed growing within the site. A small stand of young willows is located on the

## Wetland Sec2-W115

---

southern fringe. The location of the wetland in the landscape resulted in a fair hydrology rating, as this wetland aids in uptake of runoff from the adjacent agricultural use. However, its isolation from other natural communities and low plant diversity result in poor scores for animal habitat and botanical measures. Due to its location within the East Fork White River floodplain, this resource falls under the jurisdiction of the USACE and IDEM.

				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
117	Swamp Forest	0	A	Fair	Fair	Fair
		1.63	B			
		0	DEIS Preferred			
		0	Refined Preferred			

**Description of Potential Impact:** This wetland totals 4.66 acres and shows signs of receiving large amounts of run off from the surrounding corn field (old corn husks were observed piled in drift lines). Alternative B would result in a 1.63 acre impact to this wetland. This resource is depressional in nature but has a hydrologic outlet. Vegetation within the herbaceous layer is scattered throughout and the upper canopy is more or less closed. Woody debris is frequent throughout and provides for habitat within the resource. Due to its connectivity and presence of hydrophytic vegetation this wetland falls under the jurisdiction of the USACE and IDEM.

### Wetland Sec2-W118

Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
118/119	Floodplain Forest	2.37	A	Good	Good	Fair
		1.18	B			
		2.37	DEIS Preferred			
		1.93	Refined Preferred			

**Description of Potential Impact:** This resource area consists of a very large (231 acre) floodplain forested wetland with channelized flows throughout. In some areas the channel is heavily dissected and in other areas it is no more than a ditch and is shallow enough to step over. This resource would be impacted by 2.37 acres for Alternative A, 1.18 acres for Alternative B, 2.37 acres for the DEIS Preferred Alternative and 1.93 acres for the Refined Preferred Alternative. Areas at the top of the bank show signs of flooding. Trees dominating the upper canopy include oak, ash and maple. Aster and poison ivy are common in the understory, as is *Carex intumescens*. Lizards tail and button bush were also observed to be common within the wetland. Dense overstory and woody debris provide for good quality habitat. The area assessed for wetland quality using InWRAP suggests similar functionality throughout the forested floodplain. Wildlife habitat is good throughout due to the presence of standing water and the closed tree canopy as protective cover. Botanical measures are also regarded as good.

## Wetland Sec2-W118

---

Hydrology was found to be fair for this wetland. This wetland is under the jurisdiction of both USACE and IDEM due to its direct hydrologic connection to Jackson Pond and Aikman Creek within the East Fork White River floodplain.

**Description of Potential Impact:** This 3.10 acre isolated depressional wetland is located within an actively cultivated field. This resource would be impacted only by Alternative B at

## Wetland Sec2-W120

---

1.07 acres. Polygon 120 is characterized as a scrub-carr and is dominated by willows. Polygon 120 A is classified as a sedge meadow wetland, predominantly vegetated with various sedges and dock. Polygon 120B is a mixture of willow dominated scrub/shrub and wet meadow dominated by goldenrods (*Solidago spp.*). The InWRAP summary indicates that the wetland provides poor wildlife habitat based on its isolated nature, lack of standing water and small size. The resource ranks fair for plant diversity and hydrology, particularly for flood storage as it collects storm water from the surrounding landscape. Due to its location within the East Fork White River floodplain this wetland falls under the jurisdiction of the USACE and IDEM.

166A	Sedge Meadow	0	A	Fair	Fair	Good
		0.58	B			
		0	DEIS Preferred			
		0	Refined Preferred			

**Description of Potential Impact:** This wetland totals 0.58 acre and is comprised of a natural spring flowing from a forested area and ponding along a narrow dirt roadway. This wetland is only impacted by Alternative B and is impacted in its entirety by 0.58 acre. Much of the resource is classified as a sedge meadow with reed canary grass dominating. However the inner portion of the wetland located where the spring pools next to the road is classified as aquatic bed. Duckweed was observed within this resource during the summer field investigations. Within the project area, this was the only occurrence of a natural spring and therefore wetland 166A is considered a locally significant resource. An outlet pipe was observed within the wetland, which is presumed to connect to a nearby surface water; therefore, this wetland is determined to be USACE and IDEM jurisdictional due to its connectivity to Veale Creek.

		1.52	B			
		1.29	DEIS Preferred			
		0.64	Refined Preferred			

**Description of Potential Impact:** This 3.94 acre sedge meadow wetland has formed in a depression of an old field east of Hurricane Branch. This resource would be impacted by 1.29 acres by Alternative A, 1.52 acres by Alternative B, 1.29 acres by the DEIS Preferred Alternative and 0.64 acres by the Refined Preferred Alternative. Vegetation is dense and is comprised on sedges, rushes and scattered elderberry bushes. The site received an InWRAP summary ranking of fair for hydrological function based on flood attenuation and storage qualities. Although there are no surface channels emanating from the wetland, it is located at the periphery of the Hurricane Branch floodplain and therefore is determined to be under the authority of the USACE and IDEM.

189	Sedge Meadow	0.15	A	Poor	Poor	Fair
		0.81	B			
		0.15	DEIS Preferred			
		0.60	Refined Preferred			

**Description of Potential Impact:** This complex includes a roadside ditch 0.92 acres in size dense with cattails, but also includes the invasive plant species *Phalaris arundinacea* and *Phragmites australis*. It receives runoff from the adjacent roadways (including US 50) and flows into a stream. Due to the channelized nature of the resource and surrounding land use, the site scored low for animal habitat and botanical ratings, but was found to provide fair hydrological function. This site is determined to be under the USACE and IDEM jurisdiction due to its contiguous connection with an unnamed tributary to Hurricane Branch to the south.

		0.46	B			
		0.46	DEIS Preferred			
		0.46	Refined Preferred			

**Description of Potential Impact:** This 0.56 acre shallow marsh and scrub-carr site is located southeast of SR 57, and would potentially be impacted by the proposed North Pike Interchange, near SR 57 and Blackburn Road. All four Alternatives would impact this resource. Because the

## Wetland Sec2-W190

---

project impacts would result in loss of the majority of this isolated resource area, the remaining portions of the wetland are not anticipated to continue to function as wetlands, therefore the impacts for each of the four alternatives is considered to be 0.56 acres. It is primarily dominated by graminoids such as reed canary (*Phalaris arundinacea*) and *Eleocharis* sp. Shrub species within the wetland are predominantly small willows (*Salix* sp) with some occurrences of elm and ash. The wetland is located in an isolated depression at the base of a steep hill. The wetland receives runoff from industrial activities (trucking storage area) located at the top of the hill; however, it is not hydrologically connected to another wetland or waterway. For this reason, this site is not considered to be under USACE jurisdiction, but would be subject to IDEM regulatory authority.

**IDEM Jurisdiction:** Yes

Wetland Sec2-W190B						
Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
190B	Swamp Forest	0.05	A	Good	Poor	Fair
		0.05	B			
		0.05	DEIS Preferred			
		0.05	Refined Preferred			

**Description of Potential Impact:** This 0.05 acre wetland complex is a depressional resource located off Arda Road. The proposed reconfiguration of the intersection of Blackburn Road and Route 57 under all four alternatives would result in 0.05 acres of wetland impact for the all alternatives. The center of the wetland contains shallow open water vegetated with pondweed. Hydrology is likely due to runoff from upland areas. A forested fringe around the open water section is dominated by green ash, silver maple, poison ivy and asters. Low plant diversity results in a poor botanical rating for this resource. The sparse understory and position in the landscape result in a fair rating for this wetland for hydrological function. This resource is isolated and therefore determined to be only under IDEM jurisdiction. This resource area was identified after the publication of the DEIS.

Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
190C	Scrub-carr	0.03	A	Fair	Poor	Good
		0.03	B			
		0.03	DEIS Preferred			
		0.02	Refined Preferred			

**Description of Potential Impact:** This 0.09 acre wetland complex is comprised of a depressional resource located in a wooded area. Impacts to the wetland would be 0.03 acres for the A and B and DEIS Preferred Alternatives, and 0.02 for the Refined Preferred Alternative, due to the realignment of the Blackburn Road intersection with SR 57. The center of the resource appears to flood seasonally as evidenced by the sparse herbaceous layer and saturated, hydrogen sulfide smelling soils. Due to its position in the landscape this resource scores fair for the wildlife habitat measure and good for the hydrology measure. The shrub layer is dominated by green ash and silver maple. The lack of plant diversity and richness results in a poor botanical

## Wetland Sec2-W190C

Polygon ID	Wetland Type	Area Impacted (acres)	Alternative	Wetland Quality Assessment		
				Wildlife Habitat Measure	Botanical Measure	Hydrology Measure
192	Floodplain Forest	0	A	Fair	Poor	Fair
		0	B			
		0	DEIS Preferred			
		0.09	Refined Preferred			

**Description of Potential Impact:** This 0.36 acre floodplain forest wetland is located adjacent to CR 275E and is associated with an unnamed ephemeral stream of Mud Creek. This site would only be impacted by a connector road from the North Pike Interchange at 0.09 acre for the Refined Preferred Alternative. The site has fair animal habitat and hydrology measures, but is considered poor botanically due to limited diversity. The canopy consists primarily of red maple and silver maple, and generally lacks a shrub layer. At the time of the site visit, woodreed grass was the prominent ground cover, although ground cover was very sparse. This wetland is considered to be under USACE and IDEM jurisdiction due to its adjacency to an ephemeral stream that is connected to Mud Creek to the north.

**Indiana Community Type Abbreviations**

- B = bog
- DM = deep marsh
- F = fen
- FF = floodplain forest
- SMF - sand/muck flat
- SFB = seasonally flooded basin
- SM = sedge meadow
- SHM = shallow marsh
- SOW = shallow open water
- SC = scrub-carr
- SW = swamp forest
- WM = wet meadow
- WP = wet prairie

**Cowardin et al. Classifications**

- PEM = palustrine emergent
- PSS = palustrine scrub/shrub
- PFO = palustrine forest
- PAB = palustrine aquatic bed

Red Flag Indicators (for specific information regarding the nature of a red flag indicator designated by "Y", consult the InWRAP data sheets)

- Y = yes
- N = no

Note: USACE jurisdictional status is based on professional opinion only. Official correspondence on jurisdictional verification will be completed during permitting.

**Indiana Community Type Abbreviations**

- B = bog
- DM = deep marsh
- F = fen
- FF = floodplain forest
- SMF - sand/muck flat
- SFB = seasonally flooded basin
- SM = sedge meadow
- SHM = shallow marsh
- SOW = shallow open water
- SC = scrub-carr
- SW = swamp forest
- WM = wet meadow
- WP = wet prairie

**Cowardin et al. Classifications**

- PEM = palustrine emergent
- PSS = palustrine scrub/shrub
- PFO = palustrine forest
- PAB = palustrine aquatic bed

Red Flag Indicators (for specific information regarding the nature of a red flag indicator designated by "Y", consult the InWRAP data sheets)

- Y = yes
- N = no

Note: USACE jurisdictional status is based on professional opinion only. Official correspondence on jurisdictional verification will be completed during permitting.

**I-69 TIER 2 STUDY  
SECTION 2  
FINAL WETLAND ASSESSMENT REPORT**

**Appendix D  
InWRAP Data Sheets**

**Prepared By:**

**501 N. Broadway  
St. Louis, MO 63102**

**February 2010**

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Sect. 2 - W4

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): F R A N C I S C O

USGS Watershed map 14-Digit HUC: 051202 09080020

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>4</u>				
Cowardin Classification	<u>PFO1</u>				
Polygon Size (hectares)	<u>4.4ha</u>				
	<u>10.83 acres</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Carbonnel

Agency: Jacobs Engineering

Date assessed: June 20, 2005 Time assessed: \_\_\_\_\_

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 4.4 ha (10.83 acres)

Size of total wetland complex (all contiguous wetland polygons): Not contiguous

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- 100 Agricultural - pasture 1x4
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 4  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional \_\_\_\_\_ Slope \_\_\_\_\_ Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):** None

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the  
\_\_\_\_\_ Dams Hydrology (explain):  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

NO

**2.9 Presence of Special Community Types:** NO

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon  100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25

Amount of dead woody material on the soil surface:

\_\_\_ nil (<5% cover)  scattered (5-15% cover) \_\_\_ frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)? *soils*
4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile? *soils*
5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

*4/8/85*

NWI Polygon # 4

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 1

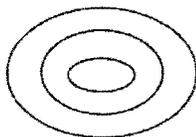

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

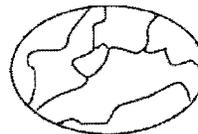

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

#### Type One Interspersion

#### Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1  
Photo number(s) 3  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes tree/shrub/herb

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Toxicodendron Radican <sup>2</sup> 1 d \_\_\_\_\_
- b Fowl Manna grass 4 e \_\_\_\_\_
- c Aster SD 3 f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Acer rubrum 5 c \_\_\_\_\_
- b Ash 3 d \_\_\_\_\_

6 domin taxa

Dominant **Tree** Species listed in order of relative abundance.

- a Acer rubrum - c Fraxinus 3
- b Ulmus 3 d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed aVEC=3

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Evidence of ponding in spring

NWI Polygon # 4

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%                      25 - 50%                      50 - 75%                      75 - 90%                      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: sect 20 wetland 4  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 20, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 4

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 4.4 ha (10.83 ac)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 4
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 4

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 4    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 10    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 3.2    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 24    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 2    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor:    Good    Medium    Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating:    Good    Medium    Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- h. Number of indicator taxa: \_\_\_\_ Rating:    Good    Medium    Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Sec 2 - W11

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Oakland City

USGS Watershed map 14-Digit HUC: 05120209080010

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	11	11A			
Cowardin Classification	PFOld/bsm	PEM			
Polygon Size (hectares)	22 ha	0.72 ha			

54.3 acres = 1.8 acres

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Meredith

Agency: Jacobs

Date assessed: June 20 Time assessed: 2:00

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 22 ha (54.3 acres)  
Size of wet smaller than shown on NWI

Size of total wetland complex (all contiguous wetland polygons): 56 acres 22.7 Ha

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 20 Native Vegetation - woodland
- 80 Native Vegetation - old field / scrub
- 24 Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

36 Rank of land use

NWI Polygon # 11  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes flowing very slowly  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Floodplain Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the  
\_\_\_\_\_ Dams \_\_\_\_\_ Hydrology (explain):  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

NWI Polygon # 11

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (><sup>15</sup>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) 50 approximate slope (percent) 3%

*Hurricane Creek - named stream flows thru polygon.*

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)? *Flood potential present 2+ high soils?*

4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 11

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 2

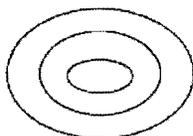

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Polygonum sp 4 d \_\_\_\_\_
- b Aster 3 e \_\_\_\_\_
- c Bidens frondosa 3 f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Acer saccharinum 5 c \_\_\_\_\_
- b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Acer saccharinum 1 c Salix sp. 3
- b Fraxinus pennsylvanica 3 d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Area @ edge of creek - on upland transitional zone

NWI Polygon # 11

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Clear weed 3

d \_\_\_\_\_

b Bidens floridosa 3

e \_\_\_\_\_

c \_\_\_\_\_

f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a Acer saccharinum 1

c \_\_\_\_\_

b Red maple Acer rubrum 5

d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a Silver maple

c \_\_\_\_\_

b \_\_\_\_\_

d \_\_\_\_\_

Tree & shrub canopy: nil    separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes    no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

zone has very little herbaceous-layer  
lots of woody debris. Depositional floodplain

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a \_\_\_\_\_

d \_\_\_\_\_

b \_\_\_\_\_

e \_\_\_\_\_

c \_\_\_\_\_

f \_\_\_\_\_

**NWI Polygon #** 11

**Data Reference #** \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

**352 Dominant Plant Species: Vegetation zone D**

Observation Point #4  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a \_\_\_\_\_ d \_\_\_\_\_  
b \_\_\_\_\_ e \_\_\_\_\_  
c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 11

Data Reference # \_\_\_\_\_

**3b.4 Species richness and indicator species.** Check all species observed within the polygon.

**Important:** if multiple species from one genus or family (marked with spp.) are seen, indicate the *number of species*.

(N = northern Indiana      SW = southwestern Indiana      numbers = C-coefficients      \* = species with high conservatism)

**Herbs: non-seed plants**

- \_\_\_ horsetail, scouring rush spp. (*Equisetum*) 2
- \_\_\_ \*ferns: marsh shield fern spp. (*Dryopteris*) 7
- \_\_\_ \*cinnamon fern (*Osmunda cinnamomea*) 9
- \_\_\_ \*royal fern (*Osmunda regalis*) 8
- \_\_\_ sensitive fern (*Onoclea sensibilis*) 4
- \_\_\_ \*other: species (if known) \_\_\_\_\_
- \_\_\_ marsh club moss (*Selaginella apoda*) 4
- \_\_\_ \*Sphagnum moss spp. (*Sphagnum*, N) 10

**Herbs: lvs. floating or submergent**

- \_\_\_ \*bladderwort spp. (*Utricularia*, N) 10
- \_\_\_ coontail (*Ceratophyllum demersum*, N) 1
- \_\_\_ duckweed spp. (*Lemnaceae*) 3
- \_\_\_ \*pondweed spp. (*Potamogeton*) 8 (except 0 for introduced *P. crispus*)
- \_\_\_ \*water lily (*Nymphaea tuberosa*, N) 6
- \_\_\_ water shield (*Brasenia schreberi*, N) 4
- \_\_\_ \*yellow spatterdock spp. (*Nuphar*) 6

**Herbs: insectivorous plants**

- \_\_\_ \*pitcher plant (*Sarracenia purpurea*, N) 10
- \_\_\_ \*sundew spp. (*Drosera*, N) 10

**Herbs: linear-lvs. or ± leafless monocots**

- \_\_\_ \*beak rush spp. (*Rhynchospora*, N) 10
- \_\_\_ blueflag iris (*Iris virginica*) 5
- \_\_\_ bulrush spp. (*Scirpus / Schoenoplectus*) 5
- \_\_\_ \*bur reed spp. (*Sparganium*) 9
- \_\_\_ cat-tail spp. (*Typha*) 1
- \_\_\_ \*cotton grass spp. (*Eriophorum*, N) 10

**Grasses (family Gramineae) – indicate types & number of species**

- \_\_\_ a. \*wild rice (*Zizania aquatica*, N) 10;
- \_\_\_ b. most native perennial grass spp. 4: e.g. cut-grass, manna-g, Canada bluejoint, foxtail [*Alopecurus*]; other \_\_\_\_\_
- \_\_\_ c. introduced grass spp. 0: reed canary grass [*Phalaris*], reed [*Phragmites*], annual grasses such as annual foxtail [*Setaria*] & barnyard grass *Echinochloa*
- \_\_\_ needle sedge spp. (*Eleocharis*) sp.1=2  
\*additional=8
- \_\_\_ nutsedge spp. (*Cyperus*) 2
- \_\_\_ \*orchid spp.: species (if known) \_\_\_\_\_
- \_\_\_ rush spp. (*Juncus*) 4
- \_\_\_ sedge spp. (*Carex*) sp.1=3 \*additional=7
- \_\_\_ \*spiderlily (*Hymenocallis occidentalis*) 9
- \_\_\_ sweet flag (*Acorus calamus*) 0
- \_\_\_ \*3-way sedge (*Dulichium arundinaceum*) 10
- \_\_\_ \*twig rush (*Cladium mariscoides*, N) 10
- \_\_\_ \*umbrella sedge (*Fuirena squarrosa*, N) 10
- \_\_\_ wild hyacinth (*Camassia scilloides*) 5

- \_\_\_ \*yellow-eyed grass (*Xyris torta*, N) 9

**Herbs: wide-leafed monocots**

- \_\_\_ \*arrow arum (*Peltandra virginica*, N) 6
- \_\_\_ arrow-head spp. (*Sagittaria*) 4
- \_\_\_ \*green dragon (*Arisaema dracontium*) 6
- \_\_\_ Jack-in-the-pulpit (*Arisaema triphyllum*) 4
- \_\_\_ pickerel weed (*Pontederia cordata*, N) 5
- \_\_\_ \*skunk cabbage (*Symplocarpus foetidus*) 8
- \_\_\_ \*water arum (*Calla palustris*, N) 10
- \_\_\_ water plantain (*Alisma plantago-aquat.*) 2

**Herbs: dicots - lvs. opposite/whorled**

- \_\_\_ \*bedstraw spp. (*Galium*) 6
- \_\_\_ beggar's tick spp. (*Bidens*) 3
- \_\_\_ blue vervain (*Verbena hastata*) 3
- \_\_\_ boneset (*Eupatorium perfoliatum*) 4
- \_\_\_ bugleweed spp. (*Lycopus*) 5
- \_\_\_ clearweed spp. (*Pilea*) 3
- \_\_\_ cup plant (*Silphium perfoliatum*) 4
- \_\_\_ false nettle (*Boehmeria cylindrica*) 3
- \_\_\_ \*fen betony (*Pedicularis lanceolata*) 6
- \_\_\_ \*gentian spp. (*Gentiana & Gentianopsis*) 8
- \_\_\_ giant ragweed (*Ambrosia trifida*) 0
- \_\_\_ Indian hemp (*Apocynum cannabinum*) 2
- \_\_\_ Joe-pye weed spp. (*Eupatorium*) 5
- \_\_\_ \*loosestrife spp. (*Lysimachia*) 6
- \_\_\_ meadow beauty (*Rhexia virginica*) 5
- \_\_\_ mint spp.: e.g. hedge nettle, mtn. m., skullcap 5
- \_\_\_ moneywort (*Lysimachia nummularia*) 0
- \_\_\_ monkey flower spp. (*Mimulus*) 4
- \_\_\_ nettle (*Urtica procera*) 1
- \_\_\_ purple loosestrife (*Lythrum salicaria*) 0
- \_\_\_ \*richweed (*Collinsonia canadensis*) 8
- \_\_\_ \*St. John's wort spp. (*Hypericum/Triandrium*) 8
- \_\_\_ sunflower spp. (*Helianthus*) 4
- \_\_\_ \*swamp loosestrife (*Decodon verticillatus*, N) 8
- \_\_\_ swamp milkweed (*Asclepias incarnata*) 4
- \_\_\_ toothcup spp. (*Ammania & Rotala*) 2
- \_\_\_ \*turtlehead spp. (*Chelone*) 8
- \_\_\_ virgin's bower (vine) (*Clematis virginiana*) 3
- \_\_\_ water puslane (*Ludwigia palustris*) 3
- \_\_\_ winged loosestrife (*Lythrum alatum*) 5

**Herbs (vines): dicots - lvs. alternate or basal and simple**

- \_\_\_ Amer. bellflower (*Campanula americana*) 4
- \_\_\_ \*asters: bristly aster (*Aster puniceus*) 7
- \_\_\_ \*flat-topped aster (*A. umbellatus*) 8
- \_\_\_ other aster spp. (e.g. New Engl.-, panicled-a) 3
- \_\_\_ \*black-eyed Susan (*Rudbeckia fulgida*) 8
- \_\_\_ cardinal flower (*Lobelia cardinalis*) 4

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Sec 2 Wetland II  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): PFOIC & PFOIA  
Classification

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 22 ha 54.3 ac
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 2/10
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

- NWI Polygon Id. 11
- a. Indiana Wetland community type: Floodplain Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 8 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.1 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 16 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: S2-W15

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Petersburg

USGS Watershed map 14-Digit HUC: 05120209050050

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	15				
Cowardin Classification	PF01/PF01A				
Polygon Size (hectares)	1.23ha				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars + Meredith

Agency: Jacobs

Date assessed: June 20, 05 Time assessed: 2:00 PM

Weather conditions: Sunny, hot

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 1.23 ha (3.05 acres)

Size of total wetland complex (all contiguous wetland polygons): 3.05 acres (1.23ha)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- 95  Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- 5  Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 15  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_ Depressional    \_\_\_\_ Slope     Floodplain    \_\_\_\_ Lacustrine  
\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon?   
• If standing water is present, is the water greater than 2 meters in depth? NO  
Is standing water present in an adjacent polygon?

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_ Permanently Flooded                      \_\_\_\_ Artificially Flooded  
 Seasonally Flooded                      \_\_\_\_ Artificially Drained  
\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_ Organic (i.e. peat, etc.)     Mineral    \_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Flood plain Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching                      \_\_\_\_ Culvert  
\_\_\_\_ Tiles                      \_\_\_\_ Other Human Disturbances to the  
\_\_\_\_ Dams                      Hydrology (explain):  
\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_ Garlic Mustard                      \_\_\_\_ Glossy Buckthorn  
\_\_\_\_ Phragmites                       Reed canary grass  
\_\_\_\_ Purple Loosestrife                      \_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

\_\_\_\_ Bog    \_\_\_\_ Fen    \_\_\_\_ Wet Sand / Muck Flat    \_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_ Good    \_\_\_\_ Medium     Poor

NWI Polygon # 15

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 15

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

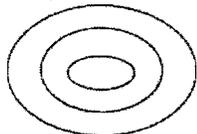

1. How many vegetation zones are evident in this wetland polygon? 3

1b. If only one vegetation zone is evident, which best describes the site?

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Phalaris 0 d \_\_\_\_\_
- b Polygonum 4 e \_\_\_\_\_
- c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_ c \_\_\_\_\_
- b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a \_\_\_\_\_ c \_\_\_\_\_
- b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy:  nil  separate, seldom touching  often touching  more or less closed

Mature trees (>12" dbh) present: yes   no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Ditched area

NWI Polygon # 15

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Aster sp. 3 d \_\_\_\_\_  
b Toxicodendron radicans e \_\_\_\_\_  
c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes / no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? Trees + herbs

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Pois Ivy 1 d \_\_\_\_\_  
b Elymus 4 e \_\_\_\_\_  
c \_\_\_\_\_ f \_\_\_\_\_

NWI Polygon # 15 Data Reference # \_\_\_\_\_

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Pataka Wetland 15  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 20, 05  
NWI polygons in Site (quadrangle and NWI id. numbers): PF01, PF01A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.23 ha (3.05 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): .19
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

- NWI Polygon Id. 15
- a. Indiana Wetland community type: Floodplain Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 6 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2.2 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 27 Rating: Good Medium Poor
- h. Number of indicator taxa: 4 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Sec 2 W17/25 Patoka River  
 Ownership (if known): Wildlife Refuge  
 USGS Topographic Quadrangle(s): Petersburg  
 USGS Watershed map 14-Digit HUC: 01520209080010

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	17/25	19/24			
Cowardin Classification	PFO1	PAB			
Polygon Size (hectares)	3.7 ha	1.0 ha			
	9.1 acres	2.4 acres			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Carbonnel  
 Agency: \_\_\_\_\_  
 Date assessed: June 21, 2005 Time assessed: 7:00 AM  
 Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 3.7 ha PFO 17/25 1.0 ha PAB 19/24  
 Size of total wetland complex (all contiguous wetland polygons): 4.7 ha 11.5 acres

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 25 Native Vegetation - woodland
- 5 Road / highway / railroad bed / parking lot
- Native Vegetation - old field / scrub
- Industrial
- Agricultural - tilled
- Residential - single family
- 70 Agricultural - pasture
- Commercial or multifamily residential
- Recreation - green space, mowed

NWI Polygon # 92 17/25 Data Reference # \_\_\_\_\_ InWRAP, TERG May 2000  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water ~~normally~~ present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? —  
Is standing water normally present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Floodplain Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  in adj. polygon  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flats or Marl Seeps

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): Bat habitat copper belly water snake

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon 100-75  75-50  50-25  <25  
Estimated woody plant foliar coverage in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  nil  scattered  frequent

#### 3a.2 Water Quality Protection Questions:

- Y**  **N** Does the wetland have a significant amount of vegetative (specifically herbaceous and woody plant) density to potentially uptake dissolved nutrients?
- Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y**  **N** Does the wetland **lack** steep slopes, large impervious areas, moderate slopes with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y**  **N** Are there recreational lakes, fishable or navigable watercourses, or water supply sources down gradient in the local watershed?
- Y**  **N** Is a vegetative buffer area or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
width of buffer area (in meters) 15 approximate slope (percent) 0

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y**  **N** Is the flood potential high in the local watershed in which the wetland is located (history of flood damages)?
- Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development?

NWI Polygon # 92 17/25 Data Reference # \_\_\_\_\_ InWRAP, TERG May 2000

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

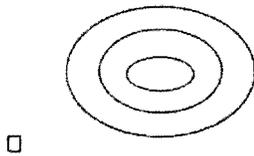

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

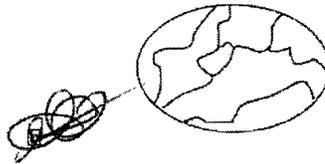

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.  
 Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

Type One Interspersion

Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1  
Roll / photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%     25 - 50%     50 - 75%     75 - 90%     >90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant Herbaceous Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                        |   |   |         |

OTHER \_\_\_\_\_

NWI Polygon # 19/24 CPAB  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes  
• If standing water is present, is the water greater than 2 meters in depth?   
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded \_\_\_\_\_ Artificially Flooded  
\_\_\_\_\_ Seasonally Flooded  
\_\_\_\_\_ Saturated (surface water seldom present) \_\_\_\_\_ Artificially Drained

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Deep Marsh / Shallow Open Water

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ *Phragmites*  Reed canary grass C  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): Copper Belly Snake

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

NWI Polygon # 19/24

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon 100-75 75-50 50-25 <25  
Estimated woody plant foliar cover in the polygon 100-75 75-50 50-25 <25  
Amount of dead woody material on the soil surface:  
nil (<5% cover) scattered (5-15% cover) frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 175 approximate slope (percent) 0

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 19/24

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

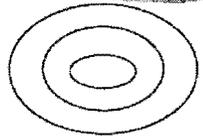

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

(Lemna)

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%                      25 - 50%                      50 - 75%

75 - 90%                      >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                |          |         |
|----------------|----------|---------|
| a <u>Lemna</u> | <u>3</u> | d _____ |
| b _____        |          | e _____ |
| c _____        |          | f _____ |

Dominant **Shrub** Species listed in order of relative abundance.

- |                                 |          |         |
|---------------------------------|----------|---------|
| a <u>Eupatorium occidentale</u> | <u>5</u> | c _____ |
| b _____                         |          | d _____ |

Dominant **Tree** Species listed in order of relative abundance.

- |               |         |
|---------------|---------|
| a <u>None</u> | c _____ |
| b _____       | d _____ |

Tree & shrub canopy: nil separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Much more floating plant material than observed in May 2005.

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Wetland 17  
Data Reference # \_\_\_\_\_  
Date of Site Visit: May & June 21, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): \_\_\_\_\_

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 4.7 ha (11.5 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
 Valuable     More Favorable     Favorable     Neutral
- c. Surrounding land use - numerical rank (max. = 1): .53
- d. Value surrounding area adds to animal habitat:    Valuable     Favorable     Low

### TIER 2 SUMMARY

- NWI Polygon Id. 17125
- a. Indiana Wetland community type: Flood plain forest
- b. Standing water - contribution to animal habitat:    Valuable     Favorable     Neutral
- c. Disturbances to site: Ditching, road embankment, culvert
- d. Exotic species rating:     Good     Medium     Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: bat habitat, copper belly water snake
- h. Polygon Quality Descriptor:     Good     Medium     Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:     Valuable     Favorable     Neutral
- b. Water quality protection - numerical rank (6 max.): 5    Rating:     Good     Medium     Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3    Rating:    Good     Medium     Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable     Favorable     Neutral
- b. Stratification as indicator of animal habitat:     Valuable     Neutral
- c. Number of dominant plant taxa observed: 5    Rating:    Good     Medium     Poor
- d. Average coefficient of conservatism: 24    Rating:    Good    Medium     Poor
- e. Tree canopy as indicator of animal habitat:     Valuable     Neutral
- f. Mature trees as indicator of animal habitat:     Valuable     Favorable     Neutral
- g. Total hydrophytic taxa observed: 18    Rating:    Good     Medium     Poor
- h. Number of indicator taxa: 1    Rating:    Good    Medium     Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. Wetland 19/24

- a. Indiana Wetland community type: Deep Marsh/Shallow Open Water
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: Copper belly water snake
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 6 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 5 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 17 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Sec 2 - W32

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Petersburg

USGS Watershed map 14-Digit HUC: 05120209060090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	32	32A			
Cowardin Classification	PFO1	PEM			
Polygon Size (hectares)	19.4ha	1.1ha			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Meredith

Agency: Jacobs

Date assessed: June 21, 2005 Time assessed: 0AM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: W32 19.4ha (48acres) + W32A 1.1ha (2.7acres)

Size of total wetland complex (all contiguous wetland polygons): 20.5ha (51acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- 95  Agricultural - pasture
- Recreation - green space, mowed
- 5  Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # W32  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard     Glossy Buckthorn  
 Phragmites     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): None

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

NWI Polygon # W31

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  
 nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 4-15 approximate slope (percent) 5

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 4132

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

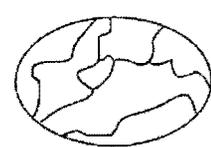

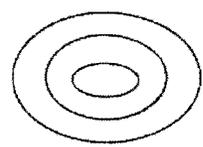

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

Type One Interspersion

Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Impatiens capensis      3      d \_\_\_\_\_
- b Bidens frondosa      3      e \_\_\_\_\_
- c Panicum Grass      0      f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance. None

- a \_\_\_\_\_      c \_\_\_\_\_
- b \_\_\_\_\_      3      d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Fraxinus pensilvanicum      c \_\_\_\_\_
- b \_\_\_\_\_      d \_\_\_\_\_

Tree & shrub canopy:    nil    separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes    no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Narrow fringe along ditch. Top rise; skulpt to south.

NWI Polygon # W32

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%                      25 - 50%                      50 - 75%                      75 - 90%                      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

**3b.4 Species richness and indicator species.** Check all species observed within the polygon.  
**Important:** if multiple species from one genus or family (marked with spp.) are seen, indicate the *number of species*.

(N = northern Indiana SW = southwestern Indiana numbers = C-coefficients \* = species with high conservatism)

**Herbs: non-seed plants**

- \_\_\_ horsetail, scouring rush spp. (*Equisetum*) 2
- \_\_\_ \*ferns: marsh shield fern spp. (*Dryopteris*) 7
- \_\_\_ \*cinnamon fern (*Osmunda cinnamomea*) 9
- \_\_\_ \*royal fern (*Osmunda regalis*) 8
- \_\_\_ sensitive fern (*Onoclea sensibilis*) 4
- \_\_\_ \*other: species (if known) \_\_\_\_\_
- \_\_\_ marsh club moss (*Selaginella apoda*) 4
- \_\_\_ \*Sphagnum moss spp. (*Sphagnum*, N) 10

**Herbs: lvs. floating or submergent**

- \_\_\_ \*bladderwort spp. (*Utricularia*, N) 10
- \_\_\_ coontail (*Ceratophyllum demersum*, N) 1
- \_\_\_ duckweed spp. (*Lemnaceae*) 3
- \_\_\_ \*pondweed spp. (*Potamogeton*) 8 (except 0 for introduced *P. crispus*)
- \_\_\_ \*water lily (*Nymphaea tuberosa*, N) 6
- \_\_\_ water shield (*Brasenia schreberi*, N) 4
- \_\_\_ \*yellow spatterdock spp. (*Nuphar*) 6

**Herbs: insectivorous plants**

- \_\_\_ \*pitcher plant (*Sarracenia purpurea*, N) 10
- \_\_\_ \*sundew spp. (*Drosera*, N) 10

**Herbs: linear-lvs. or ± leafless monocots**

- \_\_\_ \*beak rush spp. (*Rhynchospora*, N) 10
- \_\_\_ blueflag iris (*Iris virginica*) 5
- \_\_\_ bulrush spp. (*Scirpus / Schoenoplectus*) 5
- \_\_\_ \*bur reed spp. (*Sparganium*) 9
- \_\_\_ cat-tail spp. (*Typha*) 1
- \_\_\_ \*cotton grass spp. (*Eriophorum*, N) 10

Grasses (family *Gramineae*) – indicate types & number of species

- \_\_\_ a. \*wild rice (*Zizania aquatica*, N) 10;
- \_\_\_ b. most native perennial grass spp. 4: e.g. cut-grass, manna-g, Canada bluejoint, foxtail [*Alopecurus*]; other \_\_\_\_\_
- \_\_\_ c. introduced grass spp. 0: reed canary grass [*Phalaris*], reed [*Phragmites*], annual grasses such as annual foxtail [*Setaria*] & barnyard grass *Echinochloa*
- \_\_\_ needle sedge spp. (*Eleocharis*) sp.1=2 \*additional=8
- \_\_\_ nutsedge spp. (*Cyperus*) 2
- \_\_\_ \*orchid spp.: species (if known) \_\_\_\_\_
- \_\_\_ rush spp. (*Juncus*) 4
- \_\_\_ sedge spp. (*Carex*) sp.1=3 \*additional=7
- \_\_\_ \*spiderlily (*Hymenocallis occidentalis*) 9
- \_\_\_ sweet flag (*Acorus calamus*) 0
- \_\_\_ \*3-way sedge (*Dulichium arundinaceum*) 10
- \_\_\_ \*twig rush (*Cladium mariscoides*, N) 10
- \_\_\_ \*umbrella sedge (*Fuirena squarrosa*, N) 10
- \_\_\_ wild hyacinth (*Camassia scilloides*) 5

- \_\_\_ \*yellow-eyed grass (*Xyris torta*, N) 9

**Herbs: wide-leafed monocots**

- \_\_\_ \*arrow arum (*Peltandra virginica*, N) 6
- \_\_\_ arrow-head spp. (*Sagittaria*) 4
- \_\_\_ \*green dragon (*Arisaema dracontium*) 6
- \_\_\_ Jack-in-the-pulpit (*Arisaema triphyllum*) 4
- \_\_\_ pickerel weed (*Pontederia cordata*, N) 5
- \_\_\_ \*skunk cabbage (*Symplocarpus foetidus*) 8
- \_\_\_ \*water arum (*Calla palustris*, N) 10
- \_\_\_ water plantain (*Alisma plantago-aquat.*) 2

**Herbs: dicots - lvs. opposite/whorled**

- \_\_\_ \*bedstraw spp. (*Galium*) 6
- \_\_\_ beggar's tick spp. (*Bidens*) 3
- \_\_\_ blue vervain (*Verbena hastata*) 3
- \_\_\_ boneset (*Eupatorium perfoliatum*) 4
- \_\_\_ bugleweed spp. (*Lycopus*) 5
- \_\_\_ clearweed spp. (*Pilea*) 3
- \_\_\_ cup plant (*Silphium perfoliatum*) 4
- \_\_\_ false nettle (*Boehmeria cylindrica*) 3
- \_\_\_ \*fen betony (*Pedicularis lanceolata*) 6
- \_\_\_ \*gentian spp. (*Gentiana & Gentianopsis*) 8
- \_\_\_ giant ragweed (*Ambrosia trifida*) 0
- \_\_\_ Indian hemp (*Apocynum cannabinum*) 2
- \_\_\_ Joe-pye weed spp. (*Eupatorium*) 5
- \_\_\_ \*loosestrife spp. (*Lysimachia*) 6
- \_\_\_ meadow beauty (*Rhexia virginica*) 5
- \_\_\_ mint spp.: e.g. hedge nettle, mtn. m., skullcap 5
- \_\_\_ moneywort (*Lysimachia nummularia*) 0
- \_\_\_ monkey flower spp. (*Mimulus*) 4
- \_\_\_ nettle (*Urtica procera*) 1
- \_\_\_ purple loosestrife (*Lythrum salicaria*) 0
- \_\_\_ \*richweed (*Collinsonia canadensis*) 8
- \_\_\_ \*St. John's wort spp. (*Hypericum/Triandemum*) 8
- \_\_\_ sunflower spp. (*Helianthus*) 4
- \_\_\_ \*swamp loosestrife (*Decodon verticillatus*, N) 8
- \_\_\_ swamp milkweed (*Asclepias incarnata*) 4
- \_\_\_ toothcup spp. (*Ammania & Rotala*) 2
- \_\_\_ \*turtlehead spp. (*Chelone*) 8
- \_\_\_ virgin's bower (vine) (*Clematis virginiana*) 3
- \_\_\_ water pusan (*Ludwigia palustris*) 3
- \_\_\_ winged loosestrife (*Lythrum alatum*) 5

**Herbs (vines): dicots - lvs. alternate or basal and simple**

- \_\_\_ Amer. bellflower (*Campanula americana*) 4
- \_\_\_ \*asters: bristly aster (*Aster puniceus*) 7
- \_\_\_ \*flat-topped aster (*A. umbellatus*) 8
- \_\_\_ other aster spp. (e.g. New Engl., panicled-a) 3
- \_\_\_ \*black-eyed Susan (*Rudbeckia fulgida*) 8
- \_\_\_ cardinal flower (*Lobelia cardinalis*) 4

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Wet Meadow

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the  
 Dams    Hydrology (explain):  
 Road or Railroad Embankment    No.

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard     Glossy Buckthorn  
 *Phragmites*     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** No

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25  
Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25   
Amount of dead woody material on the soil surface:  
 nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope. *ROW CROPPING SURROUNDS WETLAND*  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 32A

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

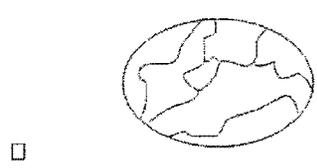

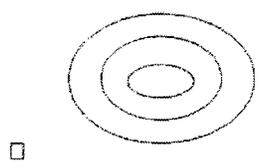

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Juncus tenuis <sup>4</sup>
- b Juncus acuminatus <sup>4</sup>
- c Eleocharis obtusa <sup>2</sup>

- d \_\_\_\_\_

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Wetland 32  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 21, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 32, 32A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 20.5 ha (51 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
 Valuable     More Favorable     Favorable     Neutral
- c. Surrounding land use - numerical rank (max. = 1): .38
- d. Value surrounding area adds to animal habitat:    Valuable     Favorable     Low

### TIER 2 SUMMARY

NWI Polygon Id. 32

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat:    Valuable     Favorable     Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating:     Good     Medium     Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:     Good     Medium     Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable     Favorable     Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:     Good     Medium     Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating:     Good     Medium     Poor

### TIER 3B SUMMARY

- a. Zonation and interspersion as indicator of animal habitat:    Valuable     Favorable     Neutral
- b. Stratification as indicator of animal habitat:     Valuable     Neutral
- c. Number of dominant plant taxa observed: 4    Rating:     Good     Medium     Poor
- d. Average coefficient of conservatism: 2.25    Rating:     Good     Medium     Poor
- e. Tree canopy as indicator of animal habitat:     Valuable     Neutral
- f. Mature trees as indicator of animal habitat:     Valuable     Favorable     Neutral
- g. Total hydrophytic taxa observed: 21    Rating:     Good     Medium     Poor
- h. Number of indicator taxa: 0    Rating:     Good     Medium     Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 32A

- a. Indiana Wetland community type: Wet Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 3 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: sect 2 - WF 37

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Petersburg

USGS Watershed map 14-Digit HUC: 05120209060090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>37</u>	<u>38</u>	<u>37A</u>		
Cowardin Classification	<u>PFO1</u>	<u>PEM</u>	<u>PSS</u>		
Polygon Size (hectares)	<u>1.3ha</u>	<u>1.2ha</u>	<u>2.1ha</u>		
	<u>3.7 acres</u>	<u>0.55 acres</u>	<u>5.11 acres</u>		

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Carbone

Agency: Jacobs

Date assessed: June 21 Time assessed: 11:00 AM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 3.79 ha (9.37 ac)

Size of total wetland complex (all contiguous wetland polygons): 3.79 ha (9.37 ac)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 10% Native Vegetation - woodland
- 20% Native Vegetation - old field / scrub
- 30% Agricultural - tilled
- 5% Agricultural - pasture
- 5% Recreation - green space, mowed
- 5% Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Commercial or multifamily residential

NWI Polygon # WF 37  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional \_\_\_\_\_ Slope \_\_\_\_\_ Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No

- If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_

Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the  
\_\_\_\_\_ Dams Hydrology (explain):  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

None  
\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ *Phragmites* \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that Influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon 100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient? *indications of ponding stained leaves.*

4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope. *less than 15m*

Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)? *ditching but not sign to speed flow due to microtop. & areas of ponding.*

3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)? *o*

4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

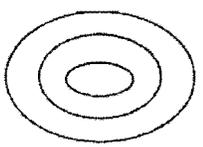

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

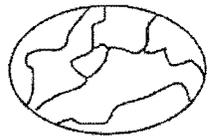

- 1 Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- \_\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%                      25 - 50%                      50 - 75%                      75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Fowl Manna Grass                      4                      d \_\_\_\_\_
- b False Nettle                                      3                      e \_\_\_\_\_
- c Jewel weed                                      3                      f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance. N/A. shrubs infrequent.

- a \_\_\_\_\_                                      c \_\_\_\_\_
- b \_\_\_\_\_                                      d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Red Maple                                      5                      c \_\_\_\_\_
- b Gr. Ash    3                      d \_\_\_\_\_

Tree & shrub canopy:    nil    separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site). Polygon need refining.

Good bird habitat.

NWI Polygon # WF 37(A)  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard     Glossy Buckthorn  
 Phragmites     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25  
Estimated woody plant foliar cover in the polygon  100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25  
Amount of dead woody material on the soil surface:  
\_\_\_ nil (<5% cover) \_\_\_ scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 50 approximate slope (percent) 30%  
5m on one side - None on other

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)? ditch
3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

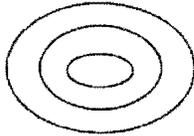

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

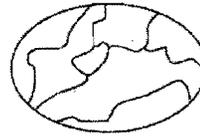

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
 10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

**OTHER** \_\_\_\_\_

NWI Polygon # 38 Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth?   
Is standing water present in an adjacent polygon?

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shallow Marsh

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 F Phragmites  S Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) 100 approximate slope (percent) 3

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?

4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

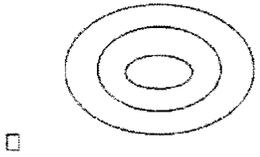

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

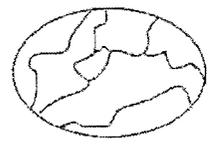

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
 Photo number(s) \_\_\_\_\_  
 (Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Wetland 37  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 21, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 37, 37A, 38

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): (9.36 acres) 3.79 ha
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 30
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. Wetland 37

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 5 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.0 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 26 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 37A

- a. Indiana Wetland community type: Shrub carr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 5 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 24 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 25 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 38

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching 4 road embankment
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2.7 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 8 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: FLAT CREEK - W43

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Petersburg

USGS Watershed map 14-Digit HUC: 55120209060090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	43	44	45	43(B)
Cowardin Classification	PFO1A	PFO1	PFO	PEM
Polygon Size (hectares)	1.7 ha	2.5 ha	1.3 ha	2.3 ha
	4.18ac	6.23ac	3.21acres	5.7

NWI Polygon ID Number				
Cowardin Classification				
Polygon Size (hectares)				

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Carmonne

Agency: Jacobs

Date assessed: June 21 Time assessed: \_\_\_\_\_

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: (19.3 acres) 7.8 ha

Size of total wetland complex (all contiguous wetland polygons): 7.8 ha (19.3 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 25 Native Vegetation - woodland
- 75 Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Native Vegetation - old field / scrub
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Commercial or multifamily residential
- \_\_\_\_\_ Recreation - green space, mowed

NWI Polygon # FLAT CREEK Wetland 43 Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon?   
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

No

**2.9 Presence of Special Community Types:** No

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

A mount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

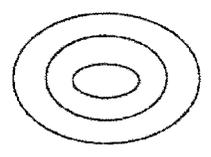

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

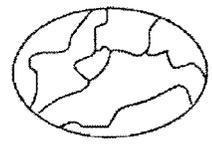

- \_\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- \_\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

Type One Interspersion

Type Two Interspersion

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Impatiens capensis 3
- b Pilea pumila 3
- c \_\_\_\_\_
- d \_\_\_\_\_
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Acer rubrum 5
- b \_\_\_\_\_
- c \_\_\_\_\_
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Acer rubrum 5
- b \_\_\_\_\_ 4
- c \_\_\_\_\_
- d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

flat creek floodplain

NWI Polygon # 43

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Stinging nettle 2
- b Fowl Manna grass 4
- c \_\_\_\_\_
- d \_\_\_\_\_
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Red Maple 5
- b Am. Elm 3
- c \_\_\_\_\_
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Red Maple
- b Betula lutea 10
- c \_\_\_\_\_
- d \_\_\_\_\_

Tree & shrub canopy: nil    separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

NWI Polygon # W44  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

S Garlic Mustard  Glossy Buckthorn  
 Phragmites S Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # W 44

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)? *ditch assoc. w RR*
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # W 44

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

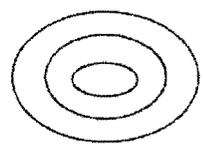

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

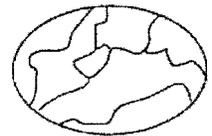

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

NWI Polygon # W43  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon?

- If standing water is present, is the water greater than 2 meters in depth?

Is standing water present in an adjacent polygon? Yes - in stream

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

No

**2.9 Presence of Special Community Types:** No

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:** No

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # W45

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # W45 Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 2

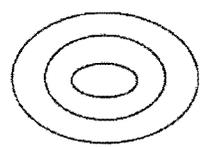

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Fragaria capensis 3
- b Pilea pumila
- c \_\_\_\_\_ 3
- d \_\_\_\_\_
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Acer rubrum 5
- b \_\_\_\_\_
- c \_\_\_\_\_

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Wetland 43 Flat Creek  
Data Reference # \_\_\_\_\_  
Date of Site Visit: August 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): PFO1A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): (15.08 acres) 6.1 ha
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.25
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 43

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: road or RR embankment
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 7 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 4.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 29 Rating: Good Medium Poor
- h. Number of indicator taxa: 4 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. W44

- a. Indiana Wetland community type: Synamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: road or RR embankment
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 19 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 45 Flat Creek

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: road or railroad embankment
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 7 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 4.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 23 Rating: Good Medium Poor
- h. Number of indicator taxa: 3 Rating: Good Medium Poor

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Pride's Creek News Wetland

Ownership (if known): 55(A) 55B 55C 56A

USGS Topographic Quadrangle(s): Oakland City

USGS Watershed map 14-Digit HUC: 05120202100020

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	55A	56A	55B	55C	
Cowardin Classification	VAD	PSS	PEM	PFO	
Polygon Size (hectares)	2.5ha	5.7ha	1.44	.36	
	6.28(acres)	14.15	1.09	0.89	

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC MLC

Agency: JACOBS

Date assessed: June 24 Time assessed: 8 AM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: (22.4 acres) 9.05ha

Size of total wetland complex (all contiguous wetland polygons): (22.4 acres) 9.05ha

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 30 Native Vegetation - woodland
- 50 Native Vegetation - old field / scrub
- 50 Agricultural - tilled
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Recreation - green space, mowed
- 20 Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Commercial or multifamily residential

NWI Polygon # 55(A)  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes  
• If standing water is present, is the water greater than 2 meters in depth? NO  
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

NO

**2.9 Presence of Special Community Types: N/D**

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 55A

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 55A

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

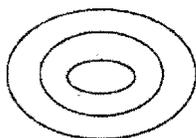

1b. If only ~~one~~ vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

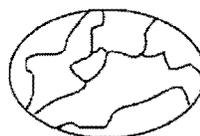

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Nettle 2
- b Bent Grass/Bluej 4
- c C. lurida 3
- d moneywort 0
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Gr. Ash saplings 3
- b Re Ma 5
- c \_\_\_\_\_
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Re Ma 5
- b \_\_\_\_\_
- c \_\_\_\_\_
- d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Very mucky wet forest Not on NWI

NWI Polygon # 559  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon?

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Wet meadow

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching  Culvert  
 Tiles  Other Human Disturbances to the  
 Dams Hydrology (explain):  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** No

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 558

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?

4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 558

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 1

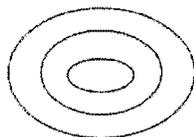

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? NO

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

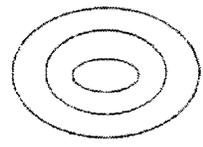

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

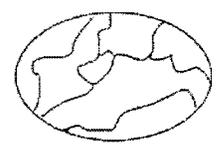

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) None  
(Note: V-mark location on the NW/1 polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

NWI Polygon # 50(A)  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  S Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present None  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon 100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  
 nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

- Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 150 approximate slope (percent) 2  
*to the west only*

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland? *to one side only*  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)? *Ditches extensively to the south*
- Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |         |         |

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: Prides Creek W 55(A)  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 24, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 55A, 55B, 55C, 4510A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 22.4 (9.05 ha)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 4
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. W 55(A) Prides Creek

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Road embankment
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 6 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2.8 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 29 Rating: Good Medium Poor
- h. Number of indicator taxa: 3 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 55B

- a. Indiana Wetland community type: wet meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 4 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 9 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 55C

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 14 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 56A

- a. Indiana Wetland community type: Shrub carr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching, road encroachment, looks like formerly mined
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 5 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 31 Rating: Good Medium Poor
- h. Number of indicator taxa: 5 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W64

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Petersburg

USGS Watershed map 14-Digit HUC: 05120202100020

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<del>64</del> 65	<del>63</del> 64	66	<del>67</del> 66A	
Cowardin Classification	PEM	DSS	PSS	PEM	
Polygon Size (hectares)	1.03 0.25 acres	0.08 0.19	0.73 1.81	0.17 0.42	

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Camargo

Agency: JACOBS

Date assessed: June 21 + August 16, 2005 Time assessed: 2:00 + 4:15 respectively

Weather conditions: Hot sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 1.06 ha (2.62 acres)

Size of total wetland complex (all contiguous wetland polygons): 1.06 ha (2.62 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- 75 Agricultural - tilled
- 25 Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 6/65  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? NO  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shallow marsh

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams    mining  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 S Phragmites     S Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon 100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 66/65

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

NWI Polygon # 02064  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams mining  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  S Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25  
Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25  
Amount of dead woody material on the soil surface:  nil (<5% cover) \_\_\_ scattered (5-15% cover) frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 6564

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

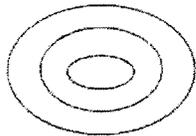

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

NWI Polygon # 166  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? YES

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see *Key to Wetland Communities of Indiana*):**

Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 S Phragmites     S Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: *Wetland Quality Descriptions* and check one):**

Good     Medium     Poor

NWI Polygon # 1010

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_ approximate slope (percent) \_\_\_

*High H<sub>2</sub>O mark on trees adj to pond!*

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 166

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 1

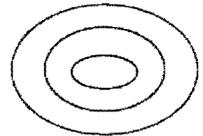

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Toxicodendron radicans <sup>tree</sup> 1
- b w.k. grass 4
- c reed canary 0
- d \_\_\_\_\_

NWI Polygon # 6/1 666A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? YES

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shallow Marsh

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  S Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 67 66A

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 47 LoloA Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

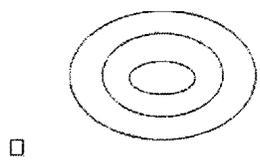

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

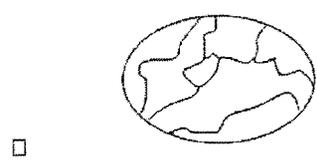

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                                      |         |

Data Reference # \_\_\_\_\_  
Date of Site Visit: June 21, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 104, 105, 106, 106A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.06 ha 2.62 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.25
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 105

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Mining
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 1 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 15 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 64

- a. Indiana Wetland community type: Shrub Corr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: former mining site
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 1 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 9 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 100

- a. Indiana Wetland community type: Shrub Carr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 10 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 606A

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Mining
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 9 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W76

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Windsor

USGS Watershed map 14-Digit HUC: 05120208170090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>76</u>	<u>76A</u>			
Cowardin Classification	<u>PFO</u>	<u>PSS</u>			
Polygon Size (hectares)	<u>1.6 ha</u>	<u>0.26 ha</u>			
	<u>3.85 acres</u>	<u>0.62 acres</u>			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson / Meredith

Agency: Jacobs

Date assessed: June 22, 2005 Time assessed: 11:00

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 1.8 ha (4.47 acres)

Size of total wetland complex (all contiguous wetland polygons): 1.8 ha (4.47 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 76  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? Yes

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present None  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 76

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 760

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

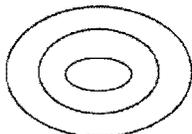

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Impatiens capensis 3

d \_\_\_\_\_

b \_\_\_\_\_

e \_\_\_\_\_

c \_\_\_\_\_

f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a Fraxinus pennsylvanica 3

c \_\_\_\_\_

b \_\_\_\_\_

d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a Salix sp. 3

c \_\_\_\_\_

b \_\_\_\_\_

d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Marginally wet area along side between two fields

**OTHER** \_\_\_\_\_

NWI Polygon # 76(A)  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? yes  
• If standing water is present, is the water greater than 2 meters in depth? 4.2 m  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 *Phragmites*     Reed canary grass  
 Purple Loosestrife     Other (list): None

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

None  
 Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?

4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 7104

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

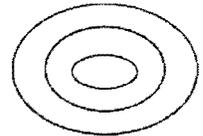

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Juncus effusus 24 d \_\_\_\_\_
- b Utr. gremioid 4 e \_\_\_\_\_
- c C. canadensis 3 f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Salix 3 c \_\_\_\_\_

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: 76  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 22, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 76, 76A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.8ha (4.47 acres)  
b. Wetland size and connectivity - contribution to animal habitat:  
     Valuable     More Favorable     Favorable     Neutral  
c. Surrounding land use - numerical rank (max. = 1): .2  
d. Value surrounding area adds to animal habitat:    Valuable    Favorable     Low

### TIER 2 SUMMARY

NWI Polygon Id. 76

- a. Indiana Wetland community type: Swamp Forest  
b. Standing water - contribution to animal habitat:    Valuable     Favorable     Neutral  
c. Disturbances to site: Ditching  
d. Exotic species rating:     Good     Medium     Poor  
e. Special Hydrologic Conditions Observed: None  
f. Special Community Type: None  
g. Rare-Threatened-Endangered Species: None  
h. Polygon Quality Descriptor:    Good     Medium     Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable     Neutral  
b. Water quality protection - numerical rank (6 max.): 2 Rating:    Good    Medium     Poor  
c. Flood and storm water storage - numerical rank (5 max.): 3 Rating:    Good     Medium     Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable     Neutral  
b. Stratification as indicator of animal habitat:     Valuable     Neutral  
c. Number of dominant plant taxa observed: 3 Rating:    Good    Medium     Poor  
d. Average coefficient of conservatism: 4.7 Rating:    Good     Medium     Poor  
e. Tree canopy as indicator of animal habitat:     Valuable     Neutral  
f. Mature trees as indicator of animal habitat:    Valuable    Favorable     Neutral  
g. Total hydrophytic taxa observed: 13 Rating:    Good    Medium     Poor  
h. Number of indicator taxa: 1 Rating:    Good    Medium     Poor

**TIER 2 SUMMARY**

NWI Polygon Id. 76(A)

- a. Indiana Wetland community type: Shrub carr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 21 Rating: Good Medium Poor
- h. Number of indicator taxa: 4 Rating: Good Medium Poor

Polygon Size (hectares)					

**1.2 Site Visit:**Team members: Lars MeredithAgency: JacobsDate assessed: June 22 Time assessed: 11:30 AMWeather conditions: Sunny, hazy

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None**1.3 Wetland Size:**Size of site under assessment: 0.11 ha (0.27 acres)Size of total wetland complex (all contiguous wetland polygons): (0.27 acres) 0.11 ha**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

 The site is connected upstream and downstream with other wetlands The site is only connected upstream with other wetlands The site is only connected downstream with other wetlands Other wetlands are nearby (within 0.25 mile) but not connected The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

 Native Vegetation - woodland Native Vegetation - old field / scrub 100% Agricultural - tilled Agricultural - pasture Recreation - green space, mowed Road / highway / railroad bed / parking lot Industrial Residential - single family Commercial or multifamily residential

NWI Polygon # 80  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes

• If standing water is present, is the water greater than 2 meters in depth? Yes

Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Deep Marsh shallow open water

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the  
 Dams Hydrology (explain):  
 Road or Railroad Embankment appears to be man made

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 20

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25

Amount of dead woody material on the soil surface:

nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?

4.  **Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 80

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 3

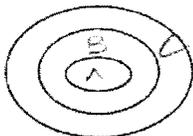

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

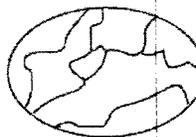

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: 80  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 22, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 80

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.11 ha (0.27 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 2
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

- NWI Polygon Id. W80
- a. Indiana Wetland community type: Deep Marsh Shallow Open Water
- b. Standing water - contribution to animal habitat: Valuable    Favorable    Neutral
- c. Disturbances to site: Appears to be man-made
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 2    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat: Valuable    Neutral
- c. Number of dominant plant taxa observed: 5    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 2.5    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 19    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 4    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

UPDATED POLYGON SIZES JULY 2009

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W180A

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 0512020210010

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	80A	80B	80C	80D	
Cowardin Classification	PEM	PFO	PFO	PEM	
Polygon Size (hectares)	0.82	0.27	2.5	0.17	
	2.03ac	0.166a	6.10a	0.43ac	

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson

Agency: Jacobs Civil

Date assessed: 8/16/05 Time assessed: 5:00 PM

Weather conditions: and 6/1/2009 Hot humid drizzle

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

Rain previous night, drizzle ongoing

**1.3 Wetland Size:**

Size of site under assessment: 0.82 (2.03 acres)

Size of total wetland complex (all contiguous wetland polygons): 3.76 (9.22 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 25 Native Vegetation - woodland
- 75 Native Vegetation - old field / scrub
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Recreation - green space, mowed
- \_\_\_\_\_ Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Commercial or multifamily residential

(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Y  
• If standing water is present, is the water greater than 2 meters in depth? N  
Is standing water present in an adjacent polygon? Y

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shallow Marsh

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

Appears to be supported by seep from dgj. slope.

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 80A

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  
 frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is not discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 80A Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

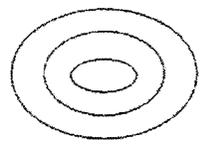

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

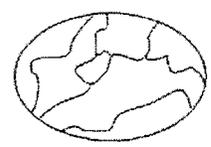

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%     25 - 50%     50 - 75%     75 - 90%     >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Typha angustifolia 1    d \_\_\_\_\_  
b Impatiens capensis 3    e \_\_\_\_\_

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Impatiens capensis 3      d \_\_\_\_\_
- b Toxicodendron radicans 1      e \_\_\_\_\_
- c Elymus sp. 4      f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Carpinus caroliniana 5      c Ulmus americana 3
- b Red bud      d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Acer rubrum 5      c Ulmus americana
- b Fraxinus penn. 3      d \_\_\_\_\_

Tree & shrub canopy:  nil     separate, seldom touching     often touching     more or less closed

Mature trees (>12" dbh) present:  yes     no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 800 C  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No

• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_

Is standing water present in an adjacent polygon? Y

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams Ditching  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): None

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

Supported by adjacent seep

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 302

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Amount of dead woody material on the soil surface: \_\_\_ nil (<5% cover)  scattered (5-15% cover) frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 90C

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

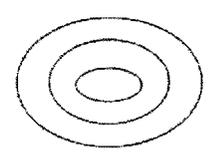

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

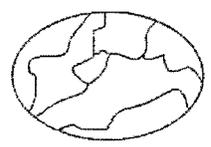

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

#### Type One Interspersion

#### Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1  
 Photo number(s) \_\_\_\_\_  
 (Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- ≥90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

NWI Polygon # 000  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? Y

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shallow Marsh

**2.6 Disturbances of Hydrology (check all that apply):** Note

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn Note  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

Supported by adjacent

**2.9 Presence of Special Community Types:** Note

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 30P

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 807 Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

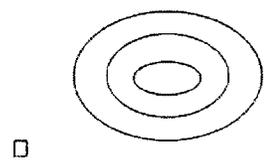

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

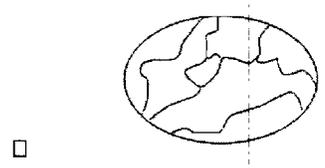

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Impatiens capensis <sup>3</sup> d \_\_\_\_\_  
b Fowl manna grass <sup>4</sup> e \_\_\_\_\_  
c \_\_\_\_\_ f \_\_\_\_\_

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: W80(A)  
Data Reference # \_\_\_\_\_  
Date of Site Visit: August 16, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 80A 80B 80C 80D  
(Not shown in NWI)

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 3.96 Ha (9.22 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 55
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. W80(A)

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: ditching
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersed as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 4    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 2.8    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 24    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 1    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 80B

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: possibly supported by seep
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 5 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 8 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.4 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 18 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 80C

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: possibly supported by seep
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 6 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.2 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 10 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 80D

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 2 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 11 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Sect 2 W89

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120208170096

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>89</u>				
Cowardin Classification	<u>PEM</u>				
Polygon Size (hectares)	<u>0.32 ha</u>				
<u>0.78 acres</u>					

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson Meredith de Carbonnel

Agency: Jacobs Civil Inc.

Date assessed: June 22, 05 Time assessed: 11:30 am

Weather conditions: Hazy Sun

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.32 ha (0.78 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.32 ha (0.78 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 100 Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 89  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Y  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shallow emergent

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the  
 Dams Hydrology (explain): Former mining site  
 Road or Railroad Embankment likely wetland was created  
by mining activities

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 89

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?

2.  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?

3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b

3a.  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?

3b.  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?

4.  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?

5.  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?

6.  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) >15m, approximate slope (percent) 7  
*Wetland in ravine with steep slopes on both sides*

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b

1a.  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?

1b.  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?

2.  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?

3.  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?

4.  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?

5.  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

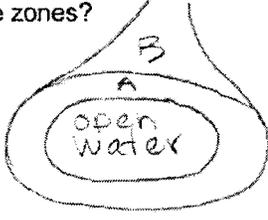

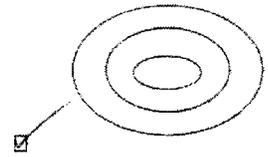

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

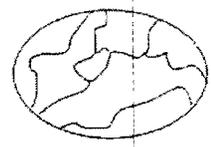

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
 Photo number(s) \_\_\_\_\_  
 (Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Phragmites australis \* 0
- b Typha sp. 1
- c \_\_\_\_\_
- d \_\_\_\_\_
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_
- b \_\_\_\_\_
- c \_\_\_\_\_
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a \_\_\_\_\_
- b \_\_\_\_\_
- c \_\_\_\_\_
- d \_\_\_\_\_

Tree & shrub canopy:  fill  separate, seldom touching  often touching  more or less closed

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

No amphibians. Water orange in color

NWI Polygon # 89

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                               |         |
|-------------------------------|---------|
| a <u>Phragmites australis</u> | d _____ |
| b <u>u.k. grassoid 4</u>      | e _____ |

- |                         |         |
|-------------------------|---------|
| a <u>Honey locust 1</u> | c _____ |
| b _____                 | d _____ |

Dominant **Tree** Species listed in order of relative abundance.

- |         |         |
|---------|---------|
| a _____ | c _____ |
| b _____ | d _____ |

Tree & shrub canopy:  nil     separate, seldom touching     often touching     more or less closed

Mature trees (>12" dbh) present:  yes     no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site). Very low quality wetland. Highly disturbed by mining. No wildlife observed.

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- \_\_\_ \*yellow-eyed grass (*Xyris torta*, N) 9

**Herbs: wide-leafed monocots**

- \_\_\_ \*arrow arum (*Peltandra virginica*, N) 6
- \_\_\_ arrow-head spp. (*Sagittaria*) 4
- \_\_\_ \*green dragon (*Arisaema dracontium*) 6
- \_\_\_ Jack-in-the-pulpit (*Arisaema triphyllum*) 4
- \_\_\_ pickerel weed (*Pontederia cordata*, N) 5
- \_\_\_ \*skunk cabbage (*Symplocarpus foetidus*) 8
- \_\_\_ \*water arum (*Calla palustris*, N) 10
- \_\_\_ water plantain (*Alisma plantago-aquat.*) 2

**Herbs: dicots - lvs. opposite/whorled**

- \_\_\_ \*bedstraw spp. (*Galium*) 6
- I beggar's tick spp. (*Bidens*) 3
- \_\_\_ blue vervain (*Verbena hastata*) 3
- \_\_\_ boneset (*Eupatorium perfoliatum*) 4
- \_\_\_ bugleweed spp. (*Lycopus*) 5
- \_\_\_ clearweed spp. (*Pilea*) 3
- \_\_\_ cup plant (*Silphium perfoliatum*) 4
- \_\_\_ false nettle (*Boehmeria cylindrica*) 3
- \_\_\_ \*fen betony (*Pedicularis lanceolata*) 6
- \_\_\_ \*gentian spp. (*Gentiana & Gentianopsis*) 8
- \_\_\_ giant ragweed (*Ambrosia trifida*) 0
- \_\_\_ Indian hemp (*Apocynum cannabinum*) 2
- \_\_\_ Joe-pye weed spp. (*Eupatorium*) 5
- \_\_\_ \*loosestrife spp. (*Lysimachia*) 6
- \_\_\_ meadow beauty (*Rhexia virginica*) 5
- \_\_\_ mint spp.: e.g. hedge nettle, mtn. m., skullcap 5
- \_\_\_ moneywort (*Lysimachia nummularia*) 0
- \_\_\_ monkey flower spp. (*Mimulus*) 4
- \_\_\_ nettle (*Urtica procera*) 1
- \_\_\_ purple loosestrife (*Lythrum salicaria*) 0
- \_\_\_ \*richweed (*Collinsonia canadensis*) 8
- \_\_\_ \*St. John's wort spp. (*Hypericum/Triandem*) 8
- \_\_\_ sunflower spp. (*Helianthus*) 4
- \_\_\_ \*swamp loosestrife (*Decodon verticillatus*, N) 8
- \_\_\_ swamp milkweed (*Asclepias incarnata*) 4
- \_\_\_ toothcup spp. (*Ammania & Rotala*) 2
- \_\_\_ \*turtlehead spp. (*Chelone*) 8
- \_\_\_ virgin's bower (vine) (*Clematis virginiana*) 3
- \_\_\_ water puslane (*Ludwigia palustris*) 3
- \_\_\_ winged loosestrife (*Lythrum alatum*) 5

**Herbs (vines): dicots - lvs. alternate or basal and simple**

- \_\_\_ Amer. bellflower (*Campanula americana*) 4
- \_\_\_ \*asters: bristly aster (*Aster puniceus*) 7
- \_\_\_ \*flat-topped aster (*A. umbellatus*) 8
- \_\_\_ other aster spp. (e.g. New Engl.-, paniced-a) 3
- \_\_\_ \*black-eyed Susan (*Rudbeckia fulgida*) 8
- \_\_\_ cardinal flower (*Lobelia cardinalis*) 4

InWrap, Terg revised June 2005

- \_\_\_ cress spp. (*Cardamine*) 4
- \_\_\_ dock spp.: swamp-, water-, pale- (*Rumex*) 4
- \_\_\_ garlic mustard (*Alliaria petiolata*) 0
- \_\_\_ golden ragwort (*Senecio aureus*) 4
- \_\_\_ \*goldenrod spp. (*Solidago ohioensis*, *S. patula*, *S. riddellii*) 9
- \_\_\_ \*grass of Parnassus (*Parnassia glauca*) 10
- \_\_\_ \*Indian plantain (*Cacalia plantaginea*) 10
- \_\_\_ ironweed spp. (*Vernonia*) 4
- \_\_\_ jewelweed, touch-me-not spp. (*Impatiens*) 3
- \_\_\_ lizard's tail (*Saururus cernuus*) 4
- \_\_\_ lobelia spp. (*Lobelia*) 4
- \_\_\_ \*marsh marigold (*Caltha palustris*) 7
- \_\_\_ \*moonseed (vine) (*Menispermum canadense*) 6
- \_\_\_ primrose-willow spp. (*Epilobium* & *Ludwigia*) 3
- \_\_\_ rose mallow spp. (*Hibiscus*) 4
- ✓ smartweed spp.: incl. jumpseed, pinkweed, tearthumb, water-pepper, water-sm. (*Polygonum*) 4 [Except \*for *P. arifolium* 10]
- \_\_\_ sneezeweed (*Helenium autumnale*) 3
- \_\_\_ stinging nettle (*Laportea canadensis*) 2
- \_\_\_ \*swamp saxifrage (*Saxifraga pa.*) 10
- \_\_\_ \*Virginia bluebells (*Mertensia virginica*) 6
- \_\_\_ waterhemp (*Amaranthus tuberculatus*) 1
- \_\_\_ wingstem (*Actinomeris alternifolia*) 3

**Herbs: dicots - lvs. basal or alternate and compound or deeply lobed**

- \_\_\_ aven spp.: rough a., white a. (*Geum*) 2
- \_\_\_ \*buttercup spp: e.g. cursed b., hooked b., swamp b. (*Ranunculus*) 6
- \_\_\_ chervil (*Chaerophyllum procumbens*) 3
- \_\_\_ \*cowbane (*Oxypolis rigidior*) 7
- \_\_\_ \*great angelica (*Angelica atropurpurea*) 6
- \_\_\_ hog peanut/ gd. nut spp. (*Amphicarpaea* & *Apios*) 5
- \_\_\_ honewort (*Cryptotaenia canadensis*) 3
- \_\_\_ meadow rue spp. (*Thalictrum*) 5
- \_\_\_ poison ivy (vine) (*Rhus radicans*) 1
- \_\_\_ \*queen-of-the-prairie (*Filipendula rubra*) 9
- \_\_\_ senna spp. (*Cassia*) 4
- \_\_\_ swamp agrimony (*Agrimonia parviflora*) 4
- \_\_\_ \*swamp thistle (*Cirsium muticum*) 8
- \_\_\_ tall coneflower (*Rudbeckia laciniata*) 3
- \_\_\_ \*water hemlock spp. (*Cicuta*) 7
- \_\_\_ water parsnips (*Sium suave*) 5

**Shrubs - leaves opposite or whorled**

- \_\_\_ bladdernut (*Staphylea trifolia*) 5
- \_\_\_ buckthorn spp. (*Rhamnus cathar.* & *frangula*) 0
- \_\_\_ buttonbush (*Cephalanthus occidentalis*) 5
- \_\_\_ dogwood, red-osier (*Cornus stolonifera*) 4
- \_\_\_ \*dogwood, blue-fruited or silky *Cornus*

- \_\_\_ *obliqua*) 7
- \_\_\_ dogwood, gray (*C. racemosa*) 2
- \_\_\_ elderberry (*Sambucus*) 2

**Shrubs - lvs. alternate**

- \_\_\_ \*cranberry spp. (*Vaccinium*, N) 10
- \_\_\_ \*dwarf birch (*Betula pumila*, N) 10
- \_\_\_ \*highbush blueberry (*V. corymbosum*, N) 9
- \_\_\_ \*leatherleaf (*Chamaedaphne calycul.*, N) 10
- \_\_\_ meadowsweet & hardhack spp. (*Spiraea*) 4
- \_\_\_ \*ninebark (*Physocarpus opulifolius*) 7
- \_\_\_ \*shrubby cinquefoil (*Potentilla fruticosa*) 9
- \_\_\_ spice bush (*Lindera benzoin*) 5
- \_\_\_ \*swamp dewberry (*Rubus hispidus*) 6
- \_\_\_ \*swamp holly & winterberry (*Ilex* spp.) 7
- \_\_\_ swamp rose (*Rosa palustris*) 5

**Trees - lvs. needle shaped**

- \_\_\_ \*tamarack (*Larix laricina*, N) 10

**Trees - lvs. compound**

- \_\_\_ \*ash, black (*Fraxinus nigra*) 7
- ✓ ash, green (*Fraxinus pennsylvanica*) 3
- \_\_\_ \*ash, pumpkin (*Fraxinus tomentosa*, SW) 8
- \_\_\_ boxelder (*Acer negundo*) 1
- \_\_\_ hickory, bitternut (*Carya cordiformis*) 5
- \_\_\_ \*hickory, shellbark (*Carya laciniosa*) 8
- ✓ honey locust (*Gleditsia triacanthos*) 1
- \_\_\_ \*poison sumac (*Rhus vernix*) 10

**Trees - lvs. simple and opposite**

- ✓ red maple (*Acer rubrum*) 5
- \_\_\_ silver maple (*A. saccharinum*) 1

**Trees - lvs. simple and alternate**

- ✓ alder, speckled (*Alnus rugosa*) 9
- \_\_\_ birch, river (*Betula nigra*) 2
- \_\_\_ black gum (*Nyssa sylvatica*) 5
- ✓ cottonwood, eastern (*Populus deltoides*) 1
- \_\_\_ \*cottonwood, swamp (*P. heterophylla*, SW) 8
- \_\_\_ elm, Amer. (*Ulmus americana*) 3
- \_\_\_ hackberry (*Celtis occidentalis*) 3
- \_\_\_ ironwood (*Carpinus caroliniana*) 5
- ✓ oak, pin or white (*Quercus*) 4
- \_\_\_ \*oak, Shumard's, sw. chestnut, sw. white 7
- \_\_\_ \*papaw (*Asimina triloba*) 6
- \_\_\_ \*sugarberry (*Celtis laevigata*, S) 7
- \_\_\_ sweet gum (*Liquidambar styraciflua*) 4
- ✓ sycamore, Amer. (*Platanus occidentalis*) 3
- ✓ willow spp. (*Salix*) sp.1=3; \*additional=7

**OTHER**

## In-WRAP Summary Sheet

Date Report Generated: August 2005  
Wetland site name: W89  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 89

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.32 ha (0.78 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 1.0
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. W89

- a. Indiana Wetland community type: Shallow Emergent Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Former Mining site
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 1.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 17 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

518 TIN RTW

**1.1 Site Identification:**

Wetland site name: 95A

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120208170090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number					
Cowardin Classification	<u>DFO</u>				
Polygon Size (hectares)	<u>0.4 ha</u>				

1.05 acres

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: M. Turgeon M de Carbonnel

Agency: JACOBS for INDOT

Date assessed: 7/21/09 Time assessed: 4:00PM

Weather conditions: overcast 81°

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.4 Hectares (1.05 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.4 Hectares

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 95A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon?   
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** \_\_\_\_\_

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn *None*  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** *None*

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
 Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
 Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is not discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a:  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b:  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a:  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b:  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland? *Ditched*
2.  Y  N Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 95A

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

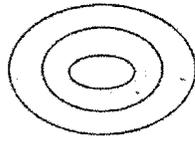

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

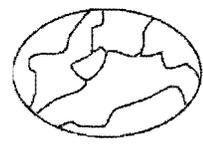

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%     25 - 50%     50 - 75%     75 - 90%     >90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Rubus idaeus 1 (facu)
- b Glyceria striata 4
- c Lonicera japonica 3 (spec)
- d \_\_\_\_\_
- e \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Acer rubrum 5
- b Cornus stolonifera 4
- c \_\_\_\_\_
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Red Maple 5
- b Quercus macrocarpa 4
- c Ulmus americana 3
- d \_\_\_\_\_

Tree & shrub canopy:  nil     separate, seldom touching     often touching     more or less  
Mature trees (>12" dbh) present:  yes     no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 95 A

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: July 2009  
Wetland site name: 95A  
Data Reference # \_\_\_\_\_  
Date of Site Visit: July 21, 2009  
NWI polygons in Site (quadrangle and NWI id. numbers): Not shown on NWI

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.05 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 2
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

- NWI Polygon Id. 95A
- a. Indiana Wetland community type: Floodplain Forest
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: Ditching
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 2    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 1    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 7    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 29    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 10    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W 115

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook T2NR7W33

USGS Watershed map 14-Digit HUC: 05120208170090  
East Fork White River - Mud Creek

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	115	116			
Cowardin Classification	PSS	PEM			
Polygon Size (hectares)	0.03ha	0.24ha			
	0.08ac	0.61 acres			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson

Agency: Jacobs

Date assessed: Jan 19, 06 Time assessed: \_\_\_\_\_

Weather conditions: Rainy

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: (0.69 acres) 0.28ha

Size of total wetland complex (all contiguous wetland polygons): (0.69 acres) 0.28ha

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- 100%  Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 115 Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? No

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  Road or Railroad Embankment in ag. field

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn None  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

No  
 Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 115

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Amount of dead woody material on the soil surface:

nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

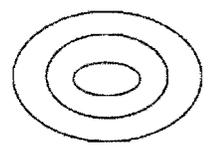

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

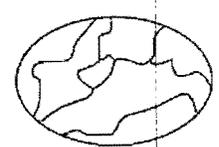

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%

75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |         |         |
|---------|---------|
| a _____ | d _____ |
| b _____ | e _____ |
| c _____ | f _____ |

NWI Polygon # 116  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? No

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Wet Meadow

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the  
 Dams Hydrology (explain):  
 Road or Railroad Embankment in ag. field actively cultivated

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** No

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # W116

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope. *Surrounded by ag. field*  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will **slow** overland flow into the wetland?  
1b.  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

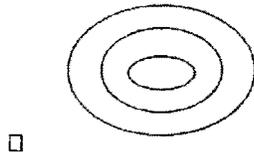

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

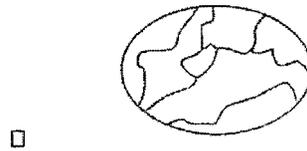

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? No - herbaceous only

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |  |         |
|--|---------|
| a <u>Polygonum</u> <u>4</u>                | d _____ |
| b <u>reed</u> <u>canary grass</u> <u>0</u> | e _____ |
| c <u>Bur reed?</u> <u>9</u>                | f _____ |

Dominant **Shrub** Species listed in order of relative abundance.

- \_\_\_ tall coneflower (*Rudbeckia laciniata*) 3
- \_\_\_ \*water hemlock spp. (*Cicuta*) 7
- \_\_\_ water parsnips (*Sium suave*) 5

**Shrubs - leaves opposite or whorled**

- \_\_\_ bladder nut (*Staphylea trifolia*) 5
- \_\_\_ buckthorn spp. (*Rhamnus cathar.* & *frangula*) 0
- \_\_\_ buttonbush (*Cephalanthus occidentalis*) 5
- \_\_\_ dogwood, red-osier (*Cornus stolonifera*) 4
- \_\_\_ \*dogwood, blue-fruited or silky *Cornus*

- \_\_\_ *obliqua*) 7
- \_\_\_ dogwood, gray (*C. racemosa*) 2
- \_\_\_ elderberry (*Sambucus*) 2

**Shrubs - lvs. alternate**

- \_\_\_ \*cranberry spp. (*Vaccinium*, N) 10
- \_\_\_ \*dwarf birch (*Betula pumila*, N) 10
- \_\_\_ \*highbush blueberry (*V. corymbosum*, N) 9
- \_\_\_ \*leatherleaf (*Chamaedaphne calycul.*, N) 10
- \_\_\_ meadowsweet & hardhack spp. (*Spiraea*) 4
- \_\_\_ \*ninebark (*Physocarpus opulifolius*) 7
- \_\_\_ \*shrubby cinquefoil (*Potentilla fruticosa*) 9
- \_\_\_ spice bush (*Lindera benzoin*) 5
- \_\_\_ \*swamp dewberry (*Rubus hispida*) 6
- \_\_\_ \*swamp holly & winterberry (*Ilex* spp.) 7
- \_\_\_ swamp rose (*Rosa palustris*) 5

**Trees - lvs. needle shaped**

- \_\_\_ \*tamarack (*Larix laricina*, N) 10

**Trees - lvs. compound**

- \_\_\_ \*ash, black (*Fraxinus nigra*) 7
- \_\_\_ ash, green (*Fraxinus pennsylvanica*) 3
- \_\_\_ \*ash, pumpkin (*Fraxinus tomentosa*, SW) 8
- \_\_\_ boxelder (*Acer negundo*) 1
- \_\_\_ hickory, bitternut (*Carya cordiformis*) 5
- \_\_\_ \*hickory, shellbark (*Carya laciniosa*) 8
- \_\_\_ honey locust (*Gleditsia triacanthos*) 1
- \_\_\_ \*poison sumac (*Rhus vernix*) 10

**Trees - lvs. simple and opposite**

- \_\_\_ red maple (*Acer rubrum*) 5
- \_\_\_ silver maple (*A. saccharinum*) 1

**Trees - lvs. simple and alternate**

- \_\_\_ \*alder, speckled (*Alnus rugosa*) 9
- \_\_\_ birch, river (*Betula nigra*) 2
- \_\_\_ black gum (*Nyssa sylvatica*) 5
- \_\_\_ cottonwood, eastern (*Populus deltoides*) 1
- \_\_\_ \*cottonwood, swamp (*P. heterophylla*, SW) 8
- \_\_\_ elm, Amer. (*Ulmus americana*) 3
- \_\_\_ hackberry (*Celtis occidentalis*) 3
- \_\_\_ ironwood (*Carpinus caroliniana*) 5
- \_\_\_ oak, pin or white (*Quercus*) 4
- \_\_\_ \*oak, Shumard's, sw. chestnut, sw. white 7
- \_\_\_ \*papaw (*Asimina triloba*) 6
- \_\_\_ \*sugarberry (*Celtis laevigata*, S) 7
- \_\_\_ sweet gum (*Liquidambar styraciflua*) 4
- \_\_\_ sycamore, Amer. (*Platanus occidentalis*) 3

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: Aug 2006  
Wetland site name: 115  
Data Reference # \_\_\_\_\_  
Date of Site Visit: Jan 2006  
NWI polygons in Site (quadrangle and NWI id. numbers): 115, 116

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.28ha (0.69 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 2
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 115

- a. Indiana Wetland community type: Shrub Carr
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: in ag field
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 1    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 3    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 4.3    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 10    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 116

- a. Indiana Wetland community type: Wet Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: in ag field
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 1 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersation as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 1 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 1 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

1.1 Site Identification: - DAVIES COUNTY

Wetland site name: WF 117

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120208170090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>117</u>				
Cowardin Classification	<u>PFO</u>				
Polygon Size (hectares)	<u>1.9 ha</u>				
	<u>4.7 acres</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Meredith

Agency: Jacobs

Date assessed: June 23 Time assessed: 8 AM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 1.9 ha (4.7 acres)

Size of total wetland complex (all contiguous wetland polygons): 1.9 ha (4.7 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 117  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional \_\_\_\_\_ Slope \_\_\_\_\_ Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? N  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):**

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn None  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

NWI Polygon # 117

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  
 nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?  
*rec's flow from adj. fields*
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 117

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

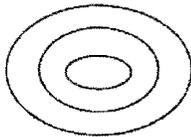

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

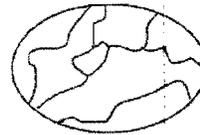

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Aster sp. 3 d \_\_\_\_\_
- b Elymus 4 e \_\_\_\_\_
- c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Fraxinus pensylvanicum 3 c \_\_\_\_\_
- b Batton bush 5 d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Asx saccharinum 1 c \_\_\_\_\_
- b Fraxinus pennsylvanicum (3) d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching often touching more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Rec's significant runoff from adjacent fields could be local imp. filter of H2O for white River watershed. 4

NWI Polygon # \_\_\_\_\_ 117 \_\_\_\_\_

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%                      25 - 50%                      50 - 75%                      75 - 90%                      >90%

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: WF 117  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 117

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.9ha 4.7 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.2
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 117

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: clipping from adj cornfield
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 5 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.2 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 110 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: NF - 118

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120208170090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>118</u>				
Cowardin Classification	<u>PFO1C</u>				
Polygon Size (hectares)	<u>93.5ha</u> <u>231ac</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Larry Jackson Meridith deCarbonna

Agency: Jacobs

Date assessed: June 23, 05 Time assessed: 9 AM

Weather conditions: Sunny Hot

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 118 + 119 together 93.5ha 231 acres

Size of total wetland complex (all contiguous wetland polygons): 93.5ha 231 acres

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

two PFO Function the same - INWRAPPED together.

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 118  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon?   
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Floodplain Forest

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching common \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): None

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good \_\_\_\_\_ Medium \_\_\_\_\_ Poor

NWI Polygon # 118

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

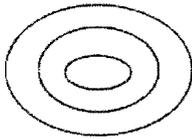

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

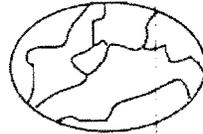

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%                      25 - 50%                      50 - 75%                      75 - 90%                      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches);

- |                          |         |
|--------------------------|---------|
| a <u>Lizard's tale</u> 4 | d _____ |
| b <u>Pumex v.</u> 4      | e _____ |
| c _____                  | f _____ |

Dominant **Shrub** Species listed in order of relative abundance.

- |                     |         |
|---------------------|---------|
| a <u>Bntobnsh</u> 5 | c _____ |
| b _____             | d _____ |

Dominant **Tree** Species listed in order of relative abundance.

- |         |         |
|---------|---------|
| a _____ | c _____ |
| b _____ | d _____ |

Tree & shrub canopy: nil separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

this zone existed along centerline

NWI Polygon # 113

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Aster \_\_\_\_\_ 3
- b poison ivy \_\_\_\_\_ 1
- c Carex intumescens \_\_\_\_\_ 3
- d Elymus \_\_\_\_\_ 4
- e \_\_\_\_\_
- f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a Hackberry \_\_\_\_\_ 3
- b Acer rubrum \_\_\_\_\_ 5
- c Acer saccharinum \_\_\_\_\_ 1
- d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a Acer saccharinum \_\_\_\_\_ 1
- b Fraxinus p. \_\_\_\_\_ 3
- c Quercus palustris \_\_\_\_\_ 4
- d \_\_\_\_\_

Tree & shrub canopy: nil    separate, seldom touching    often touching    more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Some large Populus obs. along channel

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

**OTHER** Commelina

## In-WRAP Summary Sheet

Date Report Generated: Sept 2005  
Wetland site name: \_\_\_\_\_  
Data Reference # 118  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 118

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 93.5 ha (231 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
 Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 4
- d. Value surrounding area adds to animal habitat:    Valuable     Favorable    Low

### TIER 2 SUMMARY

- NWI Polygon Id. 118
- a. Indiana Wetland community type: Floodplain Forest
- b. Standing water - contribution to animal habitat:    Valuable     Favorable    Neutral
- c. Disturbances to site: some ditching
- d. Exotic species rating:  Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:  Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable     Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:    Good     Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating:  Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:  Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:  Valuable    Neutral
- c. Number of dominant plant taxa observed: 12    Rating:  Good    Medium    Poor
- d. Average coefficient of conservatism: 3.3    Rating:    Good     Medium    Poor
- e. Tree canopy as indicator of animal habitat:  Valuable    Neutral
- f. Mature trees as indicator of animal habitat:  Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 26    Rating:  Good    Medium    Poor
- h. Number of indicator taxa: 5    Rating:    Good     Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor:    Good    Medium    Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating:    Good    Medium    Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- h. Number of indicator taxa: \_\_\_\_ Rating:    Good    Medium    Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W120

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120202090070

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	120	120A	120B		
Cowardin Classification	PS5	PEM	PEM		
Polygon Size (hectares)	0.51ha	0.62ha	0.49ha		
	1.26ac	0.62ac	1.2 acres		

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC MLC

Agency: JACOBS Civil

Date assessed: June 23 Time assessed: \_\_\_\_\_

Weather conditions: Sunny hot.

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 1.2 ha (3.08 acres)

Size of total wetland complex (all contiguous wetland polygons): 1.2 ha (3.08 acres)

**1.4 Site Settings:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 120  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shrub carr

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 120

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

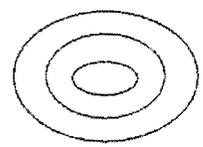

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

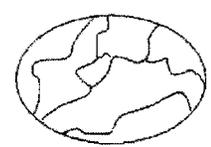

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Nettle 2

d \_\_\_\_\_

b Elymus 4

e \_\_\_\_\_

c \_\_\_\_\_

f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a Silver maple 1

NWI Polygon # WE 120A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No.

• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_

Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

wet meadow

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 *Phragmites*     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

*but upslope from a g. land*

NWI Polygon # 120A

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

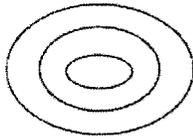

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

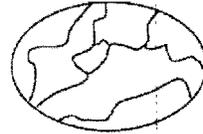

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Sedge meadow

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50% 3

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

Good  Medium  Poor

NWI Polygon # 1208

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 2

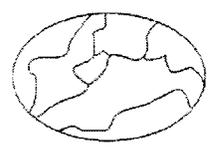

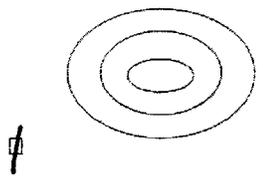

1b. If only one vegetation zone is evident, which best describes the site?

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Wet meadow

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%     25 - 50%     50 - 75%     75 - 90%     >90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Solidago \* (9) d \_\_\_\_\_
- b \_\_\_\_\_ e \_\_\_\_\_
- c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_ c \_\_\_\_\_
- b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a \_\_\_\_\_ c \_\_\_\_\_
- b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy:  nil     separate, seldom touching     often touching     more or less

Mature trees (>12" dbh) present:  yes     no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 120B

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
 0 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Salix sp (3)      d \_\_\_\_\_
- b \_\_\_\_\_      e \_\_\_\_\_
- c \_\_\_\_\_      f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_      c \_\_\_\_\_
- b \_\_\_\_\_      d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a \_\_\_\_\_      c \_\_\_\_\_
- b \_\_\_\_\_      d \_\_\_\_\_

Tree & shrub canopy:  nil     separate, seldom touching     often touching     more or less

Mature trees (>12" dbh) present:  yes     no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

**3b.2 Dominant Plant Species: Vegetation zone C**

Observation Point #3  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a \_\_\_\_\_      d \_\_\_\_\_
- b \_\_\_\_\_      e \_\_\_\_\_
- c \_\_\_\_\_      f \_\_\_\_\_

NWI Polygon # 120B Data Reference # \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a \_\_\_\_\_ c \_\_\_\_\_  
b \_\_\_\_\_ d \_\_\_\_\_

Tree & shrub canopy:  nil  separate, seldom touching  often touching  more or less closed

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

### 3b.2 Dominant Plant Species: Vegetation zone D

Observation Point #4  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%  25 - 50%  50 - 75%  75 - 90%  >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a \_\_\_\_\_ d \_\_\_\_\_

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 1208

Data Reference # \_\_\_\_\_

**3b.4 Species richness and indicator species.** Check all species observed within the polygon.  
**Important:** if multiple species from one genus or family (marked with spp.) are seen, indicate the *number of species*.

(N = northern Indiana      SW = southwestern Indiana      numbers = C-coefficients      \* = species with high conservatism)

**Herbs: non-seed plants**

- \_\_\_ horsetail, scouring rush spp. (*Equisetum*) 2
- \_\_\_ \*ferns: marsh shield fern spp. (*Dryopteris*) 7
- \_\_\_ \*cinnamon fern (*Osmunda cinnamomea*) 9
- \_\_\_ \*royal fern (*Osmunda regalis*) 8
- \_\_\_ \ sensitive fern (*Onoclea sensibilis*) 4
- \_\_\_ \*other: species (if known) \_\_\_\_\_
- \_\_\_ marsh club moss (*Selaginella apoda*) 4
- \_\_\_ \*Sphagnum moss spp. (*Sphagnum*, N) 10

**Herbs: lvs. floating or submergent**

- \_\_\_ \*bladderwort spp. (*Utricularia*, N) 10
- \_\_\_ coontail (*Ceratophyllum demersum*, N) 1
- \_\_\_ duckweed spp. (*Lemnaceae*) 3
- \_\_\_ \*pondweed spp. (*Potamogeton*) 8 (except 0 for introduced *P. crispus*)
- \_\_\_ \*water lily (*Nymphaea tuberosa*, N) 6
- \_\_\_ water shield (*Brasenia schreberi*, N) 4
- \_\_\_ \*yellow spatterdock spp. (*Nuphar*) 6

**Herbs: insectivorous plants**

- \_\_\_ \*pitcher plant (*Sarracenia purpurea*, N) 10
- \_\_\_ \*sundew spp. (*Drosera*, N) 10

**Herbs: linear-lvs. or ± leafless monocots**

- \_\_\_ \*beak rush spp. (*Rhynchospora*, N) 10
- \_\_\_ blueflag iris (*Iris virginica*) 5
- \_\_\_ bulrush spp. (*Scirpus* / *Schoenoplectus*) 5
- \_\_\_ \*bur reed spp. (*Sparganium*) 9
- \_\_\_ cat-tail spp. (*Typha*) 1
- \_\_\_ \*cotton grass spp. (*Eriophorum*, N) 10

**Grasses (family Gramineae) – indicate types & number of species**

- \_\_\_ a. \*wild rice (*Zizania aquatica*, N) 10;
- 11 b. most native perennial grass spp. 4: e.g. cut-grass, manna-g, Canada bluejoint, foxtail [*Alopecurus*]; other \_\_\_\_\_
- 1 c. introduced grass spp. 0: reed canary grass [*Phalaris*], reed [*Phragmites*], annual grasses such as annual foxtail [*Setaria*] & barnyard grass *Echinochloa*
- 1 needle sedge spp. (*Eleocharis*) sp.1=2  
\*additional=8
- 1 nutsedge spp. (*Cyperus*) 2
- \_\_\_ \*orchid spp.: species (if known) \_\_\_\_\_
- 1 rush spp. (*Juncus*) 4
- 11 sedge spp. (*Carex*) sp.1=3 \*additional=7
- \_\_\_ \*spiderlily (*Hymenocallis occidentalis*) 9
- \_\_\_ sweet flag (*Acorus calamus*) 0
- \_\_\_ \*3-way sedge (*Dulichium arundinaceum*) 10
- \_\_\_ \*twig rush (*Cladium mariscoides*, N) 10
- \_\_\_ \*umbrella sedge (*Fuirena squarrosa*, N) 10
- \_\_\_ wild hyacinth (*Camassia scilloides*) 5

- \_\_\_ \*yellow-eyed grass (*Xyris torta*, N) 9

**Herbs: wide-leaved monocots**

- \_\_\_ \*arrow arum (*Peltandra virginica*, N) 6
- \_\_\_ arrow-head spp. (*Sagittaria*) 4
- \_\_\_ \*green dragon (*Arisaema dracontium*) 6
- \_\_\_ Jack-in-the-pulpit (*Arisaema triphyllum*) 4
- \_\_\_ pickerel weed (*Pontederia cordata*, N) 5
- \_\_\_ \*skunk cabbage (*Symplocarpus foetidus*) 8
- \_\_\_ \*water arum (*Calla palustris*, N) 10
- \_\_\_ water plantain (*Alisma plantago-aquat.*) 2

**Herbs: dicots - lvs. opposite/whorled**

- \_\_\_ \*bedstraw spp. (*Galium*) 6
- 1 beggar's tick spp. (*Bidens*) 3
- \_\_\_ blue vervain (*Verbena hastata*) 3
- \_\_\_ boneset (*Eupatorium perfoliatum*) 4
- \_\_\_ bugleweed spp. (*Lycopus*) 5
- 1 clearweed spp. (*Pilea*) 3
- \_\_\_ cup plant (*Silphium perfoliatum*) 4
- \_\_\_ false nettle (*Boehmeria cylindrica*) 3
- \_\_\_ \*fen betony (*Pedicularis lanceolata*) 6
- \_\_\_ \*gentian spp. (*Gentiana* & *Gentianopsis*) 8
- 1 giant ragweed (*Ambrosia trifida*) 0
- \_\_\_ Indian hemp (*Apocynum cannabinum*) 2
- 1 Joe-pye weed spp. (*Eupatorium*) 5
- \_\_\_ \*loosestrife spp. (*Lysimachia*) 6
- \_\_\_ meadow beauty (*Rhexia virginica*) 5
- \_\_\_ mint spp.: e.g. hedge nettle, mtn. m., skullcap 5
- \_\_\_ moneywort (*Lysimachia nummularia*) 0
- \_\_\_ monkey flower spp. (*Mimulus*) 4
- \_\_\_ nettle (*Urtica procera*) 1
- \_\_\_ purple loosestrife (*Lythrum salicaria*) 0
- \_\_\_ \*richweed (*Collinsonia canadensis*) 8
- \_\_\_ \*St. John's wort spp. (*Hypericum/Triandemum*) 8
- \_\_\_ sunflower spp. (*Helianthus*) 4
- \_\_\_ \*swamp loosestrife (*Decodon verticillatus*, N) 8
- \_\_\_ swamp milkweed (*Asclepias incarnata*) 4
- \_\_\_ toothcup spp. (*Ammannia* & *Rotala*) 2
- \_\_\_ \*turtlehead spp. (*Chelone*) 8
- \_\_\_ virgin's bower (vine) (*Clematis virginiana*) 3
- \_\_\_ water puslane (*Ludwigia palustris*) 3
- \_\_\_ winged loosestrife (*Lythrum alatum*) 5

**Herbs (vines): dicots - lvs. alternate or basal and simple**

- \_\_\_ Amer. bellflower (*Campanula americana*) 4
- \_\_\_ \*asters: bristly aster (*Aster puniceus*) 7
- \_\_\_ \*flat-topped aster (*A. umbellatus*) 8
- \_\_\_ other aster spp. (e.g. New Engl.-, panicked-a) 3
- \_\_\_ \*black-eyed Susan (*Rudbeckia fulgida*) 8
- \_\_\_ cardinal flower (*Lobelia cardinalis*) 4

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: W120  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 120, 120A, 120B

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 3.1 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 2
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 120

- a. Indiana Wetland community type: shrub carr
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: None observed
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 0    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 5    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 3    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 14    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 120A

- a. Indiana Wetland community type: Wet Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None Observed
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 0 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 1.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 25 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: WF 1166 - mowed PEM sedge meadow

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120202090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>166</u>				
Cowardin Classification	<u>PEM</u>				
Polygon Size (hectares)	<u>0.09ha</u>				
	<u>0.23 acres</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC MLC

Agency: JACOBS

Date assessed: June 23 Time assessed: \_\_\_\_\_

Weather conditions: Sunny 90°

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.09ha (0.23 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.09ha (0.23 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 1106  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Sedge Meadow

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 *Phragmites*     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** 1/0

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present    NI  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

Mowed

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.

Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

*Area is mowed field adj. to tilled fields*

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 1192

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

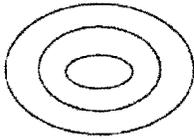

1b. If only one vegetation zone is evident, which best describes the site?

1 Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

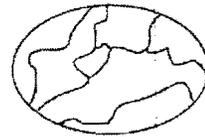

\_\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a Carex tribuloides 3

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: WLF 1660  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 1660

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.09 ha (0.23 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.4
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 1660

- a. Indiana Wetland community type: sedge meadow
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: mowed - only to cropping
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 1    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 2    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 1.5    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 8    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor:    Good    Medium    Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating:    Good    Medium    Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- h. Number of indicator taxa: \_\_\_\_ Rating:    Good    Medium    Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: WF 166A - Not on Maps - Note Spring to Open water.

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120202090030

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>166A</u>				
Cowardin Classification	<u>PEM</u>				
Polygon Size (hectares)	<u>0.23ha</u>				
	<u>0.58 acres</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC + LLC

Agency: Jacobs

Date assessed: June 23 Time assessed: 12:00

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.23ha (0.58 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.23ha (0.58 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 80% Native Vegetation - woodland
- 10 Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Native Vegetation - old field / scrub
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Commercial or multifamily residential
- \_\_\_\_\_ Recreation - green space, mowed

NWI Polygon # 166A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shallow marsh / Shallow Open Water

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

Natural spring pooling @ roadway

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard     Glossy Buckthorn  
 Phragmites     Reed canary grass \*  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

Seep or flat spring

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon 100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25  
Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25 <25  
Amount of dead woody material on the soil surface:  
nil (<5% cover) \_\_\_ scattered (5-15% cover) \_\_\_ frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?  
*no surface H<sub>2</sub>O downgrad. stops @ Road*
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 60 approximate slope (percent) 15  
*forested buffer on one side only*

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # UleA

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

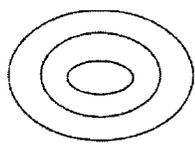

1. How many vegetation zones are evident in this wetland polygon? 2

1b. If only one vegetation zone is evident, which best describes the site?

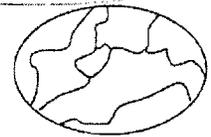

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Meadow area

Observation Point #1

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? No.

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Phalaris arundinacea d \_\_\_\_\_
- b Carex lurida 3 e \_\_\_\_\_
- c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_ c \_\_\_\_\_

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: NF 166A  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23  
NWI polygons in Site (quadrangle and NWI id. numbers): 166A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.23 ha (0.58 ac)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 8
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 166A

- a. Indiana Wetland community type: shallow marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: road embankment spring pooling @ roadway
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: Natural Spring
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 8 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2.9 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 16 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

- h. Polygon Quality Descriptor:    Good    Medium    Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating:    Good    Medium    Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating:    Good    Medium    Poor
- h. Number of indicator taxa: \_\_\_\_ Rating:    Good    Medium    Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: WF 176(A)

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Washington

USGS Watershed map 14-Digit HUC: 05120202090030

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	176A				
Cowardin Classification	PEM				
Polygon Size (hectares)	1.5ha				
	3.74 acres				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC MLC

Agency: JACOBS

Date assessed: June 23 Time assessed: 3:00

Weather conditions: \_\_\_\_\_

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

Sunny Dry

**1.3 Wetland Size:**

Size of site under assessment: 1.5ha (3.74 acres)

Size of total wetland complex (all contiguous wetland polygons): 1.5ha (3.74ac)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 75% Native Vegetation - woodland
- 25% Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Native Vegetation - old field / scrub
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Commercial or multifamily residential
- \_\_\_\_\_ Recreation - green space, mowed

NWI Polygon # 176A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional     Slope     Floodplain     Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? No

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded     Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)     Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)     Mineral     Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Sedge Meadow

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching     Culvert  
 Tiles     Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):** None

Garlic Mustard     Glossy Buckthorn  
 *Phragmites*     Reed canary grass  
 Purple Loosestrife     Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog     Fen     Wet Sand / Muck Flat     Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good     Medium     Poor

NWI Polygon # 1710(A)

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  
 nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 176 (A) Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

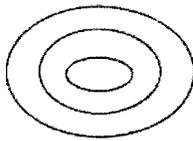

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

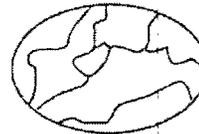

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%      25 - 50%      50 - 75%      75 - 90%      >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a Juncus canadensis      d \_\_\_\_\_
- b Elymus sp.      e \_\_\_\_\_
- c \_\_\_\_\_      f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

- a \_\_\_\_\_      c \_\_\_\_\_
- b \_\_\_\_\_      d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

- a \_\_\_\_\_      c \_\_\_\_\_
- b \_\_\_\_\_      d \_\_\_\_\_

Tree & shrub canopy: nil separate, seldom touching      often touching      more or less closed

Mature trees (>12" dbh) present: yes no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

New "polygon" across road from site.

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: Sept 2005  
Wetland site name: 176A  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 176A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 1.5ha (3.74 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 1.75
- d. Value surrounding area adds to animal habitat: Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 176A

- a. Indiana Wetland community type: Sedge Meadow
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: mowed surrounding wet area
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating: Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 2    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 4    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 17    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 2    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral

**1.2 Site Visit:**

Team members: LHC MLC

Agency: JACOBS

Date assessed: June 23 05 Time assessed: 2:30

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 11.2 ha (27.6 acres)

Size of total wetland complex (all contiguous wetland polygons): 11.2 ha (27.6 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 55% Native Vegetation - woodland
- 50% Native Vegetation - old field / scrub
- 50% Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? N  
• If standing water is present, is the water greater than 2 meters in depth? N  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):** None

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites S Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good \_\_\_\_\_ Medium \_\_\_\_\_ Poor

NWI Polygon # 178

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **Y**  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **Y**  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **Y**  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **Y**  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **Y**  **N** Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **Y**  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **Y**  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope. *minor*  
Average width of buffer area (in meters) 17 approximate slope (percent) 0

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **Y**  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **Y**  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **Y**  **N** Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **Y**  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **Y**  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **Y**  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 178

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 2

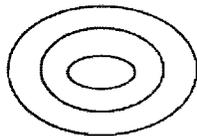

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

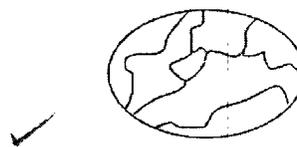

\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

Type One Interspersion

Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? Yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |   |                   |          |   |       |

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 50 approximate slope (percent)

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 178 b.  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? Y

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
\_\_\_\_\_ Seasonally Flooded \_\_\_\_\_ Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Sedge Meadow

**2.6 Disturbances of Hydrology (check all that apply):** None

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn None  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

\_\_\_\_\_ None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good \_\_\_\_\_ Medium \_\_\_\_\_ Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
 Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
 Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is not discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) 100 approximate slope (percent) 2

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

- \_\_\_ sycamore, Amer. (*Platanus occidentalis*) 3
- \_\_\_ willow spp. (*Salix*) sp.1=3; \*additional=7

**OTHER** \_\_\_\_\_

NWI Polygon # 119  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for **each** NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? N  
• If standing water is present, is the water greater than 2 meters in depth? N  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Swamp Forest

**2.6 Disturbances of Hydrology (check all that apply):** None

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
\_\_\_\_\_ Dams  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ *Phragmites* S Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good \_\_\_\_\_ Medium \_\_\_\_\_ Poor

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 17 approximate slope (percent) 0

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

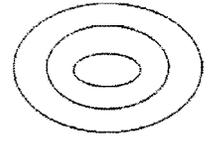

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 2

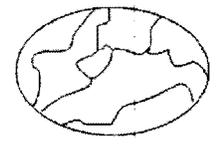

- 1b. If only one vegetation zone is evident, which best describes the site?  
 \_\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.  
 \_\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
 Photo number(s) \_\_\_\_\_  
 (Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?  
 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? YES

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |   |                           |          |   |       |

(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

\_\_\_\_\_ Depressional \_\_\_\_\_ Slope  Floodplain \_\_\_\_\_ Lacustrine  
\_\_\_\_\_ Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? N

• If standing water is present, is the water greater than 2 meters in depth? N

Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded \_\_\_\_\_ Artificially Drained  
\_\_\_\_\_ Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Floodplain Forest

**2.6 Disturbances of Hydrology (check all that apply):** None

\_\_\_\_\_ Ditching \_\_\_\_\_ Culvert  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the  
\_\_\_\_\_ Dams Hydrology (explain):  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites S Reed canary grass  
\_\_\_\_\_ Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

\_\_\_\_\_ None

**2.9 Presence of Special Community Types:** No

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good \_\_\_\_\_ Medium \_\_\_\_\_ Poor

NWI Polygon # 179A

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
Amount of dead woody material on the soil surface:  nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

- Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
- Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
- If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
- Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
- Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
- Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) 32 approximate slope (percent) 7

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

- If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
- Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
- Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
- Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
- Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 179a

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

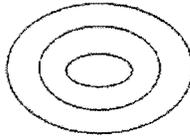

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

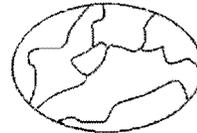

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: Veale Creek WF 178  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 23, 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 178, 178a, 178b, 179, 179A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 11.2 ha (27.4 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 1
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 178

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 10 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 19 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 178A

- a. Indiana Wetland community type: Sedge Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 4 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 14 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 178B

- a. Indiana Wetland community type: Sedge Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 4 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 11 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 179

- a. Indiana Wetland community type: Swamp Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 5 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.4 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 19 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 179A

- a. Indiana Wetland community type: Floodplain Forest
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 4 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 5 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 3.7 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 22 Rating: Good Medium Poor
- h. Number of indicator taxa: 2 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W1860

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Montgomery

USGS Watershed map 14-Digit HUC: 05120202090020

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	186				
Cowardin Classification	PFA				
Polygon Size (hectares)	0.32ha				

0.8 ac

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC MLC

Agency: Jacobs

Date assessed: June 23 Time assessed: \_\_\_\_\_

Weather conditions: Hot sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.32ha 0.8 acres

Size of total wetland complex (all contiguous wetland polygons): 0.8 acres

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

The site is connected upstream and downstream with other wetlands

The site is only connected upstream with other wetlands

The site is only connected downstream with other wetlands

Other wetlands are nearby (within 0.25 mile) but not connected

The wetland site is isolated

outlet to ditch

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

Native Vegetation - woodland

Native Vegetation - old field / scrub

100% Agricultural - tilled

Agricultural - pasture

Recreation - green space, mowed

Road / highway / railroad bed / parking lot

Industrial

Residential - single family

Commercial or multifamily residential

NWI Polygon # 186  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Sedge Meadow

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  Reed canary grass  
 Purple Loosestrife  Other (list): None

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

None  
 Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 186

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **N** Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **N** Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

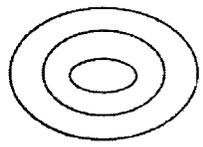

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

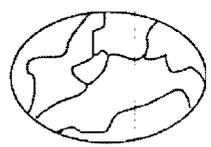

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_

(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: September 2005  
Wetland site name: W 186  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 186

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): .32 ha (.8 ac)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): .2
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

- NWI Polygon Id. WF 186
- a. Indiana Wetland community type: Sedge Meadow
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: ditching, culvert, planted/filled
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 0 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersation as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 1.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 10 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: PEM W 189

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Montgomery

USGS Watershed map 14-Digit HUC: 05120202090020

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	189	189A			
Cowardin Classification	PEM	PEM			
Polygon Size (hectares)	0.20ha 0.51ac	0.008 .02			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: LHC / MLC

Agency: Jacobs

Date assessed: June 23 Time assessed: 4 PM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.20ha (0.53acres)

Size of total wetland complex (all contiguous wetland polygons): 0.20ha (0.53acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- 30 Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- 70 Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # 189 Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? No

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shallow Marsh

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 *Phragmites*  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** No

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 139

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25

Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25

Amount of dead woody material on the soil surface:

nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is not discharged into the wetland polygon?  
*adjacent to Pt. 50*
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?  
*lg. impervious areas - 2 roadways*
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)? *Culvert outlet*
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 189

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

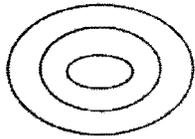

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

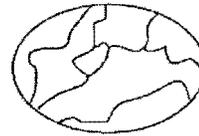

- Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.
- Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                 |          |          |         |
|-----------------|----------|----------|---------|

- \_\_\_ toothcup spp. (*Ammania & Rotala*) 2
- \_\_\_ \*turtlehead spp. (*Chelone*) 8
- \_\_\_ virgin's bower (vine) (*Clematis virginiana*) 3
- \_\_\_ water puslane (*Ludwigia palustris*) 3
- \_\_\_ winged loosestrife (*Lythrum alatum*) 5

**Herbs (vines): dicots - lvs. alternate or basal and simple**

- \_\_\_ Amer. bellflower (*Campanula americana*) 4
- \_\_\_ \*asters: bristly aster (*Aster puniceus*) 7
- \_\_\_ \*flat-topped aster (*A. umbellatus*) 8
- \_\_\_ other aster spp. (e.g. New Engl., paniced-a) 3
- \_\_\_ \*black-eyed Susan (*Rudbeckia fulgida*) 8
- \_\_\_ cardinal flower (*Lobelia cardinalis*) 4

- \_\_\_ cress spp. (*Cardamine*) 4
- \_\_\_ dock spp.: swamp-, water-, pale- (*Rumex*) 4
- \_\_\_ garlic mustard (*Alliaria petiolata*) 0
- \_\_\_ golden ragwort (*Senecio aureus*) 4
- \_\_\_ \*goldenrod spp. (*Solidago ohioensis*, *S. patula*, *S. riddellii*) 9
- \_\_\_ \*grass of Parnassus (*Parnassia glauca*) 10
- \_\_\_ \*Indian plantain (*Cacalia plantaginea*) 10
- \_\_\_ ironweed spp. (*Vernonia*) 4
- \_\_\_ jewelweed, touch-me-not spp. (*Impatiens*) 3
- \_\_\_ lizard's tail (*Saururus cernuus*) 4
- \_\_\_ lobelia spp. (*Lobelia*) 4
- \_\_\_ \*marsh marigold (*Caltha palustris*) 7
- \_\_\_ \*moonseed (vine) (*Menispermum canadense*) 6
- \_\_\_ primrose-willow spp. (*Epilobium* & *Ludwigia*) 3
- \_\_\_ rose mallow spp. (*Hibiscus*) 4
- \_\_\_ smartweed spp.: incl. jumpseed, pinkweed, tearthumb, water-pepper, water-sm. (*Polygonum*) 4 [Except \*for *P. arifolium* 10]
- \_\_\_ sneezeweed (*Helenium autumnale*) 3
- \_\_\_ stinging nettle (*Laportea canadensis*) 2
- \_\_\_ \*swamp saxifrage (*Saxifraga pa.*) 10
- \_\_\_ \*Virginia bluebells (*Mertensia virginica*) 6
- \_\_\_ waterhemp (*Amaranthus tuberculatus*) 1
- \_\_\_ wingstem (*Actinomeris alternifolia*) 3

**Herbs: dicots - lvs. basal or alternate and compound or deeply lobed**

- \_\_\_ aven spp.: rough a., white a. (*Geum*) 2
- \_\_\_ \*buttercup spp: e.g. cursed b., hooked b., swamp b. (*Ranunculus*) 6
- \_\_\_ chervil (*Chaerophyllum procumbens*) 3
- \_\_\_ \*cowbane (*Oxypolis rigidior*) 7
- \_\_\_ \*great angelica (*Angelica atropurpurea*) 6
- \_\_\_ hog peanut/ gd. nut spp. (*Amphicarpaea* & *Apios*) 5
- \_\_\_ honewort (*Cryptotaenia canadensis*) 3
- \_\_\_ meadow rue spp. (*Thalictrum*) 5
- \_\_\_ poison ivy (vine) (*Rhus radicans*) 1
- \_\_\_ \*queen-of-the-prairie (*Filipendula rubra*) 9
- \_\_\_ senna spp. (*Cassia*) 4
- \_\_\_ swamp agrimony (*Agrimonia parviflora*) 4
- \_\_\_ \*swamp thistle (*Cirsium muticum*) 8
- \_\_\_ tall coneflower (*Rudbeckia laciniata*) 3
- \_\_\_ \*water hemlock spp. (*Cicuta*) 7
- \_\_\_ water parsnips (*Sium suave*) 5

**Shrubs - leaves opposite or whorled**

- \_\_\_ bladdernut (*Staphylea trifolia*) 5
- \_\_\_ buckthorn spp. (*Rhamnus cathar.* & *frangula*) 0
- \_\_\_ buttonbush (*Cephalanthus occidentalis*) 5
- \_\_\_ dogwood, red-osier (*Cornus stolonifera*) 4
- \_\_\_ \*dogwood, blue-fruited or silky *Cornus*

- \_\_\_ *obliqua*) 7
- \_\_\_ dogwood, gray (*C. racemosa*) 2
- \_\_\_ elderberry (*Sambucus*) 2

**Shrubs - lvs. alternate**

- \_\_\_ \*cranberry spp. (*Vaccinium*, N) 10
- \_\_\_ \*dwarf birch (*Betula pumila*, N) 10
- \_\_\_ \*highbush blueberry (*V. corymbosum*, N) 9
- \_\_\_ \*leatherleaf (*Chamaedaphne calycul.*, N) 10
- \_\_\_ meadowsweet & hardhack spp. (*Spiraea*) 4
- \_\_\_ \*ninebark (*Physocarpus opulifolius*) 7
- \_\_\_ \*shrubby cinquefoil (*Potentilla fruticosa*) 9
- \_\_\_ spice bush (*Lindera benzoin*) 5
- \_\_\_ \*swamp dewberry (*Rubus hispidus*) 6
- \_\_\_ \*swamp holly & winterberry (*Ilex* spp.) 7
- \_\_\_ swamp rose (*Rosa palustris*) 5

**Trees - lvs. needle shaped**

- \_\_\_ \*tamarack (*Larix laricina*, N) 10

**Trees - lvs. compound**

- \_\_\_ \*ash, black (*Fraxinus nigra*) 7
- \_\_\_ ash, green (*Fraxinus pennsylvanica*) 3
- \_\_\_ \*ash, pumpkin (*Fraxinus tomentosa*, SW) 8
- \_\_\_ boxelder (*Acer negundo*) 1
- \_\_\_ hickory, bitternut (*Carya cordiformis*) 5
- \_\_\_ \*hickory, shellbark (*Carya laciniosa*) 8
- \_\_\_ honey locust (*Gleditsia triacanthos*) 1
- \_\_\_ \*poison sumac (*Rhus vernix*) 10

**Trees - lvs. simple and opposite**

- \_\_\_ red maple (*Acer rubrum*) 5
- \_\_\_ silver maple (*A. saccharinum*) 1

**Trees - lvs. simple and alternate**

- \_\_\_ \*alder, speckled (*Alnus rugosa*) 9
- \_\_\_ birch, river (*Betula nigra*) 2
- \_\_\_ black gum (*Nyssa sylvatica*) 5
- \_\_\_ cottonwood, eastern (*Populus deltoides*) 1
- \_\_\_ \*cottonwood, swamp (*P. heterophylla*, SW) 8
- \_\_\_ elm, Amer. (*Ulmus americana*) 3
- \_\_\_ hackberry (*Celtis occidentalis*) 3
- \_\_\_ ironwood (*Carpinus caroliniana*) 5
- \_\_\_ oak, pin or white (*Quercus*) 4
- \_\_\_ \*oak, Shumard's, sw. chestnut, sw. white 7
- \_\_\_ \*papaw (*Asimina triloba*) 6
- \_\_\_ \*sugarberry (*Celtis laevigata*, S) 7
- \_\_\_ sweet gum (*Liquidambar styraciflua*) 4
- \_\_\_ sycamore, Amer. (*Platanus occidentalis*) 3
- \_\_\_ willow spp. (*Salix*) sp.1=3; \*additional=7

**OTHER**

## In-WRAP Summary Sheet

Date Report Generated: Sept 2005  
Wetland site name: W189  
Data Reference # \_\_\_\_\_  
Date of Site Visit: June 2005  
NWI polygons in Site (quadrangle and NWI id. numbers): 189

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.20 ha (0.51 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable More Favorable Favorable Neutral
- c. Surrounding land use - numerical rank (max. = 1): 24
- d. Value surrounding area adds to animal habitat: Valuable Favorable Low

### TIER 2 SUMMARY

NWI Polygon Id. 189

- a. Indiana Wetland community type: Shallow Marsh
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: Wetland is essentially ditch next to Rt 50 Roadway
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 2 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 3 Rating: Good Medium Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 2 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 0.5 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 7 Rating: Good Medium Poor
- h. Number of indicator taxa: 0 Rating: Good Medium Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W-190

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120201

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	190	190			
Cowardin Classification	PEM	PSS			
Polygon Size (hectares)	0.11 acres	0.46 acres			

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Lars Carlson

Agency: Jacobs

Date assessed: Jan. 10, 06 Time assessed: \_\_\_\_\_

Weather conditions: Rainy

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.21 ha (0.51 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.21 ha (0.51 acres)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 50% Native Vegetation - woodland
- 5% Road / highway / railroad bed / parking lot
- 45% Native Vegetation - old field / scrub
- 45% Industrial
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Commercial or multifamily residential
- \_\_\_\_\_ Recreation - green space, mowed

NWI Polygon # 190 Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Yes  
• If standing water is present, is the water greater than 2 meters in depth? N  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present)  Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Shallow emergent marsh

**2.6 Disturbances of Hydrology (check all that apply):** None

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass C  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

**Tier 3a Individual Polygon: Rapid Hydrology Indicators**

**3a.1 Notable Features that influence water quality and hydrology:**

Estimated herbaceous plant cover (percentage) in the polygon  100-75  75-50  50-25  <25  
 Estimated woody plant foliar cover in the polygon  100-75  75-50  50-25  <25  
 Amount of dead woody material on the soil surface:  
 nil (<5% cover)  scattered (5-15% cover)  frequent (>20% cover)

**3a.2 Water Quality Protection Questions:**

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) 100' approximate slope (percent) 10%

**3a.3 Flood and Stormwater Storage / Attenuation Questions:**

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 190

Data Reference # \_\_\_\_\_

### Tier 3b Individual Polygon: Rapid Vegetation Description

#### 3b.1 Zonation and Interspersion:

1. How many vegetation zones are evident in this wetland polygon? 1

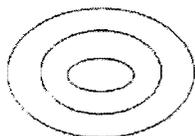

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

#### Type One Interspersion

#### Type Two Interspersion

#### 3b.2 Dominant Plant Species: Vegetation zone A

Observation Point #1

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                            |   |         |
|----------------------------|---|---------|
| a <u>Reed Canary Grass</u> | 1 | d _____ |
| b <u>Burr Reed</u>         | 0 | e _____ |
| c <u>Eleocharis</u>        | 2 | f _____ |

Dominant **Shrub** Species listed in order of relative abundance.

- |         |         |
|---------|---------|
| a _____ | c _____ |
| b _____ | d _____ |

Dominant **Tree** Species listed in order of relative abundance.

- |         |         |
|---------|---------|
| a _____ | c _____ |
| b _____ | d _____ |

Tree & shrub canopy:  nil  separate, seldom touching  often touching  more or less closed

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

Large disturbed area (trucking) located adjacent and upslope from wetland. 4  
- Allows runoff into wetland.

NWI Polygon # 190

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%
- 25 - 50%
- 50 - 75%
- 75 - 90%
- >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

NWI Polygon # W1910 (PSS portion) Data Reference # \_\_\_\_\_  
(see table on page one)

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? NO  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon?

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shrub Carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  Culvert  
 Tiles  Other Human Disturbances to the Hydrology (explain):  
 Dams  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

None  
 Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon #

190

Data Reference #

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50  50-25 \_\_\_ <25

Amount of dead woody material on the soil surface: \_\_\_ nil (<5% cover)  scattered (5-15% cover) frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 190 PSS Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

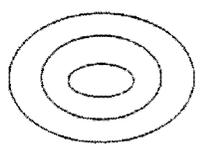

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

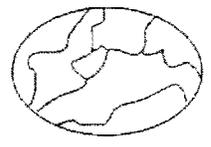

\_\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? yes

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- a \_\_\_\_\_ d \_\_\_\_\_  
b \_\_\_\_\_ e \_\_\_\_\_  
c \_\_\_\_\_ f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

InWrap, Terg revised June 2005

## In-WRAP Summary Sheet

Date Report Generated: Jan 2006  
Wetland site name: W-190  
Data Reference # \_\_\_\_\_  
Date of Site Visit: Jan 10, 2006  
NWI polygons in Site (quadrangle and NWI id. numbers): (Not NWI Listed) 190

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.19 ha (0.47 acres)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 45
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 190

- a. Indiana Wetland community type: shallow Emergent Marsh
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: adj to trucking facility
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating: Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat: Valuable    Neutral
- c. Number of dominant plant taxa observed: 3    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 33    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 10    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 1    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

NWI Polygon Id. 190 PSS

- a. Indiana Wetland community type: Sprub Carr
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: trucking-dumping
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): 3 Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersions as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: 3 Rating: Good Medium Poor
- d. Average coefficient of conservatism: 2.3 Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: 6 Rating: Good Medium Poor
- h. Number of indicator taxa: 1 Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: Arda Road New Wetland 190B

Ownership (if known): SIBTINRBN

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: 05120201

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	<u>190B</u>				
Cowardin Classification	<u>PFO</u>				
Polygon Size (hectares)	<u>0.06ha</u>				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: M. Turgeon M. deCarbannel

Agency: JACOBS for INDOT

Date assessed: 7/21/09 Time assessed: 3:00PM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.14 acres .06ha

Size of total wetland complex (all contiguous wetland polygons): 0.14 .06ha

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- Native Vegetation - woodland
- Native Vegetation - old field / scrub
- Agricultural - tilled
- Agricultural - pasture
- Recreation - green space, mowed
- Road / highway / railroad bed / parking lot
- Industrial
- Residential - single family
- Commercial or multifamily residential

NWI Polygon # W190 B  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional \_\_\_\_\_ Slope \_\_\_\_\_ Floodplain \_\_\_\_\_ Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? Y

- If standing water is present, is the water greater than 2 meters in depth? 2 meters in depth

Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded \_\_\_\_\_ Artificially Flooded  
 Seasonally Flooded  
 Saturated (surface water seldom present) \_\_\_\_\_ Artificially Drained

**2.4 Soil Type:**

Organic (i.e. peat, etc.) \_\_\_\_\_ Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shrub-carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching \_\_\_\_\_ Culvert  
 Tiles \_\_\_\_\_ Other Human Disturbances to the Hydrology (explain):  
 Dams \_\_\_\_\_  
 Road or Railroad Embankment

None

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
 *Phragmites* \_\_\_\_\_ Reed canary grass  
 Purple Loosestrife \_\_\_\_\_ Other (list): \_\_\_\_\_

None

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types:**

Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

None

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

NWI Polygon # 190 B

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Estimated woody plant foliar cover in the polygon \_\_\_ 100-75  75-50 \_\_\_ 50-25 \_\_\_ <25

Amount of dead woody material on the soil surface: \_\_\_ nil (<5% cover) \_\_\_ scattered (5-15% cover)  frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  **N** Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  **N** Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  **N** Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  **N** Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  **N** Does the wetland lack steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  **N** Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  **N** Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  **N** Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  **N** Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  **N** Does the wetland lack man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  **N** Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)? ?
4.  **N** Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  **N** Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 190 B Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 2

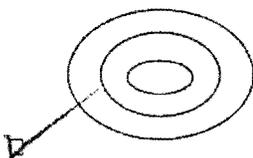

1b. If only one vegetation zone is evident, which best describes the site?

\_\_\_\_ Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

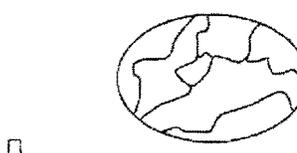

\_\_\_\_ Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

**Observation Point #1**

Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                              |         |
|------------------------------|---------|
| a <u>Aster sp.</u> <u>3</u>  | d _____ |
| b <u>Poison Ivy</u> <u>1</u> | e _____ |

- \_\_\_ sycamore, Amer. (*Platanus occidentalis*) 3
- \_\_\_ willow spp. (*Salix*) sp.1=3; \*additional=7

OTHER violet, lonicera

## In-WRAP Summary Sheet

Date Report Generated: July 21, 2009  
Wetland site name: W190B  
Data Reference # \_\_\_\_\_  
Date of Site Visit: July 21, 2009  
NWI polygons in Site (quadrangle and NWI id. numbers): Not listed on NWI

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.15 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.33
- d. Value surrounding area adds to animal habitat:    Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 190B

- a. Indiana Wetland community type: Shrub Carr
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: barrier downstream end appears man made
- d. Exotic species rating:    Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 0 Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4 Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 5 Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 2.0 Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 7 Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0 Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersation as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W190C (Arda<sup>off.</sup> Road)

Ownership (if known): SIBTINRBN

USGS Topographic Quadrangle(s): Sandy Hook

USGS Watershed map 14-Digit HUC: \_\_\_\_\_

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	190C				
Cowardin Classification	PSS				
Polygon Size (hectares)	0.03ha				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Mike Turgeon & Meredith de Carbonnel

Agency: Jacobs

Date assessed: 7/21/09 Time assessed: 3:30 PM

Weather conditions: Sunny

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

None

**1.3 Wetland Size:**

Size of site under assessment: 0.03 Ha (0.1 acres)

Size of total wetland complex (all contiguous wetland polygons): 0.03 Ha

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 100% Native Vegetation - woodland
- \_\_\_\_\_ Native Vegetation - old field / scrub
- \_\_\_\_\_ Agricultural - tilled
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Recreation - green space, mowed
- \_\_\_\_\_ Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Commercial or multifamily residential

NWI Polygon # 1906  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional  Slope  Floodplain  Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? \_\_\_\_\_  
Is standing water present in an adjacent polygon? \_\_\_\_\_

**2.3 Apparent Hydroperiod (check one):**

Permanently Flooded  Artificially Flooded  
 Seasonally Flooded  Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

Organic (i.e. peat, etc.)  Mineral  Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):** Shrub-Carr

**2.6 Disturbances of Hydrology (check all that apply):**

Ditching  None  Culvert  
 Tiles  Other Human Disturbances to the  
 Dams Hydrology (explain):  
 Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

None  Garlic Mustard  Glossy Buckthorn  
 Phragmites  Reed canary grass  
 Purple Loosestrife  Other (list): \_\_\_\_\_

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

No

**2.9 Presence of Special Community Types:** None

Bog  Fen  Wet Sand / Muck Flat  Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
 RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

Good  Medium  Poor

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50 X 50-25 \_\_\_ <25  
 Estimated woody plant foliar cover in the polygon \_\_\_ 100-75 \_\_\_ 75-50 X 50-25 \_\_\_ <25  
 Amount of dead woody material on the soil surface: \_\_\_ nil (<5% cover) X scattered (5-15% cover) frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1. Y N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2. Y N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
 3a. Y N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
 3b. Y N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4. Y N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5. Y N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6. Y N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
 Average width of buffer area (in meters) 80 approximate slope (percent) 2

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
 1a. Y N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
 1b. Y N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2. Y N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3. Y N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4. Y N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5. Y N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 1902

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

1b. If only one vegetation zone is evident, which best describes the site?

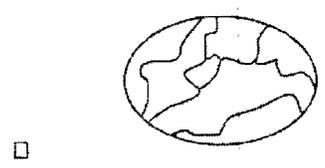

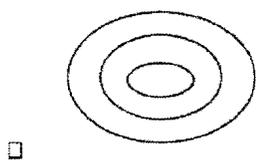

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? \_\_\_\_\_

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

- |                         |          |                    |          |
|-------------------------|----------|--------------------|----------|
| a <u>Rice cut grass</u> | <u>4</u> | d <u>Clearweed</u> | <u>3</u> |
| b <u>Jewel weed</u>     | <u>3</u> | e _____            |          |
| c <u>Lemna spp.</u>     | <u>3</u> | f _____            |          |

Dominant **Shrub** Species listed in order of relative abundance.

- |              |          |         |
|--------------|----------|---------|
| a <u>Ash</u> | <u>3</u> | c _____ |
| b _____      |          | d _____ |

Dominant **Tree** Species listed in order of relative abundance.

- |                       |          |         |
|-----------------------|----------|---------|
| a <u>Silver Maple</u> | <u>1</u> | c _____ |
| b <u>Ash</u>          | <u>3</u> | d _____ |

Tree & shrub canopy:  nil  separate, seldom touching  often touching  more or less  
Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site). Center of polygon has sparse herbaceous layer - likely from flooding in spring. Soils have sulfur smell when disturbed.

NWI Polygon # 190 C

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%     
  25 - 50%

## In-WRAP Summary Sheet

Date Report Generated: July 2009  
Wetland site name: 190C  
Data Reference # \_\_\_\_\_  
Date of Site Visit: July 2009  
NWI polygons in Site (quadrangle and NWI id. numbers): (NW1 NW1 listed)

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.1 acres
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 1.0
- d. Value surrounding area adds to animal habitat: Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 190C

- a. Indiana Wetland community type: shrub carr
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: None
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor: Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 5    Rating: Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 4    Rating: Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersion as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat: Valuable    Neutral
- c. Number of dominant plant taxa observed: 10    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 2.8    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat: Valuable    Neutral
- f. Mature trees as indicator of animal habitat: Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 12    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 0    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_
- h. Polygon Quality Descriptor: Good Medium Poor

**TIER 3A SUMMARY**

- a. Dead woody material as indicator of animal habitat: Valuable Favorable Neutral
- b. Water quality protection - numerical rank (6 max.): \_\_\_\_ Rating: Good Medium Poor
- c. Flood and storm water storage - numerical rank (5 max.): \_\_\_\_ Rating: Good Medium Poor

**TIER 3B SUMMARY**

- a. Zonation and interspersion as indicator of animal habitat: Valuable Favorable Neutral
- b. Stratification as indicator of animal habitat: Valuable Neutral
- c. Number of dominant plant taxa observed: \_\_\_\_ Rating: Good Medium Poor
- d. Average coefficient of conservatism: \_\_\_\_ Rating: Good Medium Poor
- e. Tree canopy as indicator of animal habitat: Valuable Neutral
- f. Mature trees as indicator of animal habitat: Valuable Favorable Neutral
- g. Total hydrophytic taxa observed: \_\_\_\_ Rating: Good Medium Poor
- h. Number of indicator taxa: \_\_\_\_ Rating: Good Medium Poor

**Tier 1: Assessment Overview**

**1.1 Site Identification:**

Wetland site name: W192

Ownership (if known): \_\_\_\_\_

USGS Topographic Quadrangle(s): Sandy Hook, IN

USGS Watershed map 14-Digit HUC: 05120208170090

Identify each NWI Polygon within the Wetland Site (Polygon specific data)

NWI Polygon ID Number	92A				
Cowardin Classification	PFO				
Polygon Size (hectares)	0.36 ac.				

NWI Polygon ID Number					
Cowardin Classification					
Polygon Size (hectares)					

**1.2 Site Visit:**

Team members: Matt Riehle, Luke Hildebrand

Agency: BLA, INC

Date assessed: 12/16/09 Time assessed: 12:30 pm CDT

Weather conditions: Sunny, 32 deg. F

Note any unusual weather events that may have influenced the current conditions within this wetland system (e.g. recent heavy rains, an unusually dry season, an especially early spring, etc.):

**1.3 Wetland Size:**

Size of site under assessment: 0.36 ac (0.15 ha)

Size of total wetland complex (all contiguous wetland polygons): 0.36 ac (0.15 ha)

**1.4 Site Setting:**

Degree of isolation from other wetlands or wetland complexes:

- The site is connected upstream and downstream with other wetlands
- The site is only connected upstream with other wetlands
- The site is only connected downstream with other wetlands
- Other wetlands are nearby (within 0.25 mile) but not connected
- The wetland site is isolated

General assessment of adjacent land use / land cover in the area forming the perimeter of the wetland site (indicate the % of each):

- 70 Native Vegetation - woodland
- 5 Native Vegetation - old field / scrub
- 25 Agricultural - tilled
- \_\_\_\_\_ Agricultural - pasture
- \_\_\_\_\_ Recreation - green space, mowed
- \_\_\_\_\_ Road / highway / railroad bed / parking lot
- \_\_\_\_\_ Industrial
- \_\_\_\_\_ Residential - single family
- \_\_\_\_\_ Commercial or multifamily residential

NWI Polygon # 192A  
(see table on page one)

Data Reference # \_\_\_\_\_

**Tier 2 Individual Polygon: Preliminary Assessment** (to be completed on-site for each NWI polygon present in the wetland)

**2.1 Wetland Geomorphic Setting and Surface Water Flow (check one):**

Depressional \_\_\_\_\_ Slope \_\_\_\_\_ Floodplain \_\_\_\_\_ Lacustrine  
 Riverine (within the river/stream banks)

**2.2 Presence of Standing Water:**

Is standing water present in the polygon? No  
• If standing water is present, is the water greater than 2 meters in depth? No  
Is standing water present in an adjacent polygon? N/A

**2.3 Apparent Hydroperiod (check one):**

\_\_\_\_\_ Permanently Flooded \_\_\_\_\_ Artificially Flooded  
\_\_\_\_\_ Seasonally Flooded \_\_\_\_\_ Artificially Drained  
 Saturated (surface water seldom present)

**2.4 Soil Type:**

\_\_\_\_\_ Organic (i.e. peat, etc.)  Mineral \_\_\_\_\_ Both Mineral and Organic Present

**2.5 Wetland Community Type for this NWI polygon (see Key to Wetland Communities of Indiana):**

Floodplain Forest

**2.6 Disturbances of Hydrology (check all that apply):**

\_\_\_\_\_ Ditching \_\_\_\_\_  Culvert (Downstream)  
\_\_\_\_\_ Tiles \_\_\_\_\_ Other Human Disturbances to the  
\_\_\_\_\_ Dams \_\_\_\_\_ Hydrology (explain):  
\_\_\_\_\_ Road or Railroad Embankment

**2.7 Presence of Invasive Exotics (Score as: S = Scattered, F = Frequent, or C = Common):**

\_\_\_\_\_ Garlic Mustard \_\_\_\_\_ Glossy Buckthorn  
\_\_\_\_\_ Phragmites \_\_\_\_\_ Reed canary grass  
\_\_\_\_\_ Purple Loosestrife  Other (list): Lonicera maackii

**2.8 Presence of Special Hydrologic Conditions (i.e. seeps, wet slopes, floating mat):**

None

**2.9 Presence of Special Community Types: None**

\_\_\_\_\_ Bog \_\_\_\_\_ Fen \_\_\_\_\_ Wet Sand / Muck Flat \_\_\_\_\_ Sinkhole pond or swamp

**2.10 Presence of Known Federal or Indiana Rare, Threatened or Endangered Species:**

None observed or known to be present  
\_\_\_\_\_ RTES Present (list): \_\_\_\_\_

**2.11 Wetland Polygon Quality Descriptor (see: Wetland Quality Descriptions and check one):**

\_\_\_\_\_ Good  Medium \_\_\_\_\_ Poor

NWI Polygon # 192A

Data Reference # \_\_\_\_\_

### Tier 3a Individual Polygon: Rapid Hydrology Indicators

#### 3a.1 Notable Features that influence water quality and hydrology:

Estimated herbaceous plant cover (percentage) in the polygon \_\_\_ 100-75 \_\_\_ 75-50 \_\_\_ 50-25  <25

Estimated woody plant foliar cover in the polygon  100-75 \_\_\_ 75-50 \_\_\_ 50-25 \_\_\_ <25

Amount of dead woody material on the soil surface:

\_\_\_ nil (<5% cover)  scattered (5-15% cover) \_\_\_ frequent (>20% cover)

#### 3a.2 Water Quality Protection Questions:

1.  Y  N Does the wetland have a significant amount of vegetative (specifically perennial and woody plant) density to potentially uptake dissolved nutrients?
2.  Y  N Managed water (e.g. municipal or road stormwater drainage, agricultural drainage outlet, industrial or municipal wastewater) is **not** discharged into the wetland polygon?
3. If wetland in question is a depressional wetland answer 3a, if not, answer 3b  
3a.  Y  N Does the wetland have a shape or flow that allows for the settling out of suspended materials before the water reaches the center of the wetland?  
3b.  Y  N Is the position of the wetland in the landscape such that run-off is held or filtered before entering a surface body of water down gradient?
4.  Y  N Does the wetland **lack** steep slopes (>12%), large impervious areas, moderate slopes (6-12%) with row cropping, or areas with severe overgrazing within 100 meters of its border?
5.  Y  N Are there recreational lakes, navigable watercourses, or water supply sources located within a mile down gradient in the local watershed?
6.  Y  N Is a vegetative buffer area (>15 m wide) or another wetland polygon (areas where overland flow could be filtered) located upland and adjacent to the wetland polygon? If yes, describe buffer area width and slope.  
Average width of buffer area (in meters) \_\_\_\_\_ approximate slope (percent) \_\_\_\_\_

#### 3a.3 Flood and Stormwater Storage / Attenuation Questions:

1. If wetland in question is a depressional wetland answer 1a, if not, answer 1b  
1a.  Y  N Around the wetland is there a buffer strip of natural vegetation (forested, old field, scrub) that will slow overland flow into the wetland?  
1b.  Y  N Is there a significant amount of microtopography or vegetative density within the wetland to reduce the velocity of the water leaving the wetland?
2.  Y  N Does the wetland **lack** man-made structures that would speed the flow of water from the wetland (tiles, culverts, ditches)?
3.  Y  N Is the flood potential high in the sub-watershed in which the wetland is located (history of flood damages)?
4.  Y  N Is the wetland located in a watershed where the majority of the upland soils are clayey and impermeable, or is bedrock within two feet of the top of the soil profile?
5.  Y  N Is the wetland located in a local watershed which has highly modified runoff conditions due to existing development (e.g. >50% area in row crop, commercial, or residential use)?

NWI Polygon # 192A

Data Reference # \_\_\_\_\_

**Tier 3b Individual Polygon: Rapid Vegetation Description**

**3b.1 Zonation and Interspersion:**

1. How many vegetation zones are evident in this wetland polygon? 1

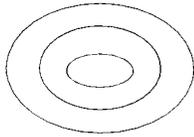

1b. If only one vegetation zone is evident, which best describes the site?

Polygon composed of a mosaic of small vegetation patches, hummocks, or tussocks; heterogeneous textures across the polygon.

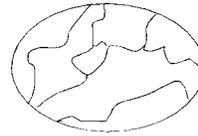

Polygon composed of a single vegetation type with more or less uniform texture across the polygon.

2. If more than one vegetation zone is present in the polygon, which interspersion diagram most closely represents the distribution of these zones?

**Type One Interspersion**

**Type Two Interspersion**

**3b.2 Dominant Plant Species: Vegetation zone A**

Observation Point #1  
Photo number(s) 1-4  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

10 - 25%

25 - 50%

50 - 75%

75 - 90%

>90%

Is there notable layering/stratification in this vegetation zone? No

Dominant **Herbaceous** Species (i.e. covering more than 10 % of the area) listed in order of relative abundance. (Mark with an \* any species that forms extensive monocultural patches).

a None

d \_\_\_\_\_

b \_\_\_\_\_

e \_\_\_\_\_

c \_\_\_\_\_

f \_\_\_\_\_

Dominant **Shrub** Species listed in order of relative abundance.

a None

c \_\_\_\_\_

b \_\_\_\_\_

d \_\_\_\_\_

Dominant **Tree** Species listed in order of relative abundance.

a Acer rubrum

c Ulmus rubra

b Acer saccharinum

d Salix nigra

Tree & shrub canopy:  nil  separate, seldom touching  often touching  more or less closed

Mature trees (>12" dbh) present:  yes  no

**Other remarks** (include personal comments about what adds to or detracts from the quality of this wetland site).

NWI Polygon # 192A

Data Reference # \_\_\_\_\_

**3b.2 Dominant Plant Species: Vegetation zone B**

Observation Point #2  
Photo number(s) \_\_\_\_\_  
(Note: V-mark location on the NWI polygon)

What % of the polygon does this vegetative zone occupy?

- 10 - 25%       25 - 50%       50 - 75%       75 - 90%       >90%

## In-WRAP Summary Sheet

Date Report Generated: 12/21/09  
Wetland site name: W192  
Data Reference # \_\_\_\_\_  
Date of Site Visit: 12/16/09  
NWI polygons in Site (quadrangle and NWI id. numbers): 192A

### TIER 1 SUMMARY:

- a. Total wetland area (hectares): 0.36 ac. (0.15 ha)
- b. Wetland size and connectivity - contribution to animal habitat:  
Valuable    More Favorable    Favorable    Neutral
- c. Surrounding land use - numerical rank (max. = 1): 0.79
- d. Value surrounding area adds to animal habitat: Valuable    Favorable    Low

### TIER 2 SUMMARY

NWI Polygon Id. 192A

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat:    Valuable    Favorable    Neutral
- c. Disturbances to site: Conduit - approx. 100 Ft. downstream
- d. Exotic species rating: Good    Medium    Poor
- e. Special Hydrologic Conditions Observed: None
- f. Special Community Type: None
- g. Rare-Threatened-Endangered Species: None
- h. Polygon Quality Descriptor:    Good    Medium    Poor

### TIER 3A SUMMARY

- a. Dead woody material as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Water quality protection - numerical rank (6 max.): 3    Rating:    Good    Medium    Poor
- c. Flood and storm water storage - numerical rank (5 max.): 1    Rating:    Good    Medium    Poor

### TIER 3B SUMMARY

- a. Zonation and interspersions as indicator of animal habitat:    Valuable    Favorable    Neutral
- b. Stratification as indicator of animal habitat:    Valuable    Neutral
- c. Number of dominant plant taxa observed: 4    Rating:    Good    Medium    Poor
- d. Average coefficient of conservatism: 3.5    Rating:    Good    Medium    Poor
- e. Tree canopy as indicator of animal habitat:    Valuable    Neutral
- f. Mature trees as indicator of animal habitat:    Valuable    Favorable    Neutral
- g. Total hydrophytic taxa observed: 11    Rating:    Good    Medium    Poor
- h. Number of indicator taxa: 2    Rating:    Good    Medium    Poor

Supplemental page for wetland sites with multiple NWI polygons:

**TIER 2 SUMMARY**

**NWI Polygon Id.** \_\_\_\_\_

- a. Indiana Wetland community type: \_\_\_\_\_
- b. Standing water - contribution to animal habitat: Valuable Favorable Neutral
- c. Disturbances to site: \_\_\_\_\_
- d. Exotic species rating: Good Medium Poor
- e. Special Hydrologic Conditions Observed: \_\_\_\_\_
- f. Special Community Type: \_\_\_\_\_
- g. Rare-Threatened-Endangered Species: \_\_\_\_\_

- Coast Prairie Redox (A16)
- Iron-Manganese Masses (F12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

**Remarks:**

crayfish burrows throughout.  
Rhizospheres, small mottles & depletions become prevalent 6-12"

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one is required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)

Secondary Indicators (minimum of two required)

- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- True Aquatic Plants (B14)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Gauge or Well Data (D9)
- Other (Explain in Remarks)
- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? Yes  No  Depth (inches): 8"

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one is required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)

Secondary Indicators (minimum of two required)

- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- True Aquatic Plants (B14)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Gauge or Well Data (D9)
- Other (Explain in Remarks)
- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)

Hydric Soil Present? Yes  No

Remarks:

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one is required; check all that apply)

Secondary Indicators (minimum of two required)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)

- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- True Aquatic Plants (B14)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Gauge or Well Data (D9)
- Other (Explain in Remarks)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): Surface  
 Saturation Present? Yes  No  Depth (inches): Surface

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

SOIL

Sampling Point: WF / W

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-10"	10YR 7/12	100	—	—	—	—	silt/clay	mucky dark small soil

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5)
- 2 cm Muck (A10)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 5 cm Mucky Peat or Peat (S3)

- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- Coast Prairie Redox (A16)
- Iron-Manganese Masses (F12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: thick mucky soil

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

Secondary Indicators (minimum of two required)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)

- Water-Stained Leaves (B9)
- Aquatic Fauna (B13) Lemna
- True Aquatic Plants (B14)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Gauge or Well Data (D9)
- Other (Explain in Remarks)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): Surface

Wetland Hydrology Present? Yes  No
