

Abstracting Edit Check

Checking for errors in the abstract has gotten easier. You should be using the interactive edits. You start the same way as with other edit checks. From the 'Errors' menu at the top of the abstract choose 'CDC'.

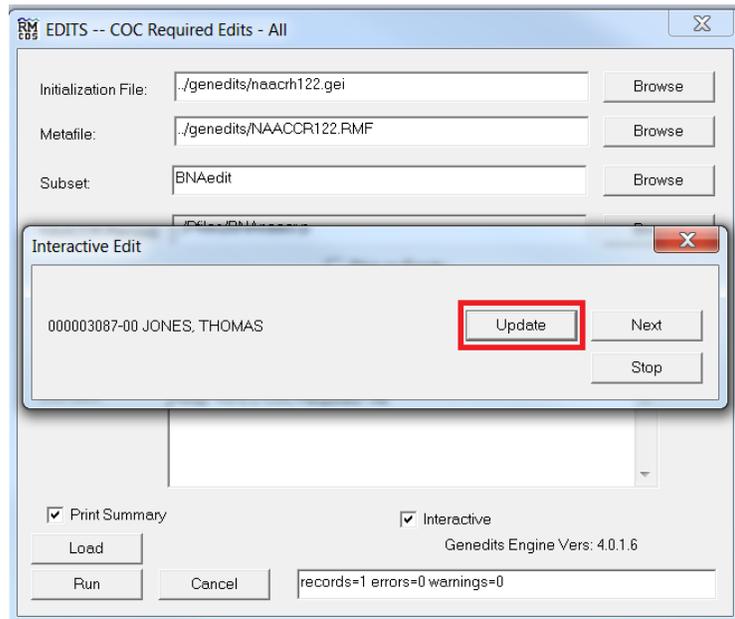

The regular edit check options will come up. You will check the box 'Interactive'. Then click 'Run'.

Several boxes will pop up with the final box having an option to 'Update' the case.

When you click the 'Update' box you will see an abstract screen. The other boxes, 'Next' and 'Stop' are used if you are using this function with a subset of cases. 'Next' will take you to the next case in a subset and 'Stop' will quit the Interactive Edits program.

There is an example of the abstract screen on the next page. You will notice that all of the edit fields are in red. The wording to the right of the fields is the same as you would see on a printed edit list. If you need to see additional information to correct the edit you can change your screen set to your regular screen set by using the drop-down at the bottom of the screen and selecting your screen set then click on the 'Change' button. If you change to another screen set, the red fields will still be seen but the edit will not appear. Once you are finished correcting your errors, re-run the edits. This will clear the red boxes.
