

# Creating an 'EDITS' Report

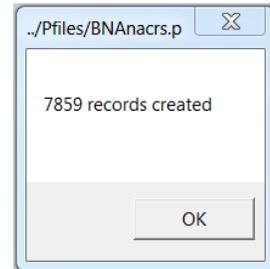

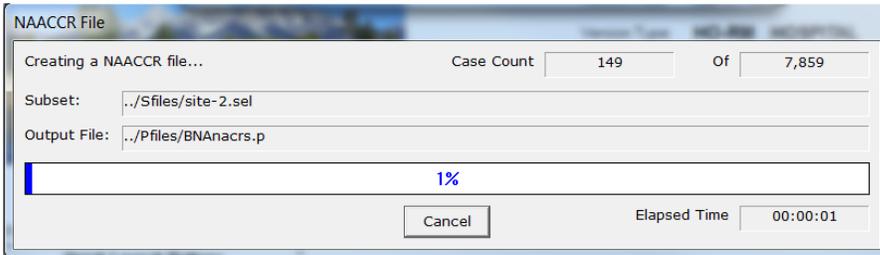

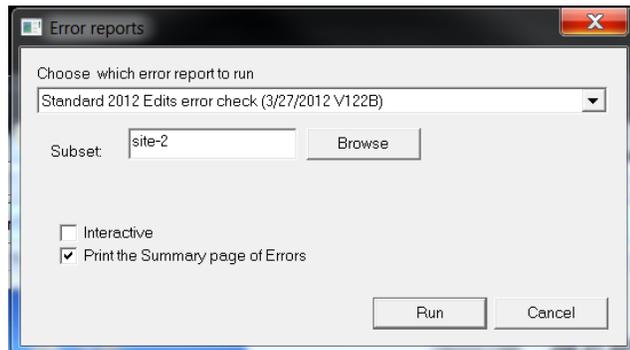

Running EDITS is a very important step in you data submission process. The EDITS report can help both the Hospital and Central Registry determine which areas may be causing the Registrar problems while abstracting.

To run the EDITS report select the 'Reports' menu and choose 'Error Checks'.

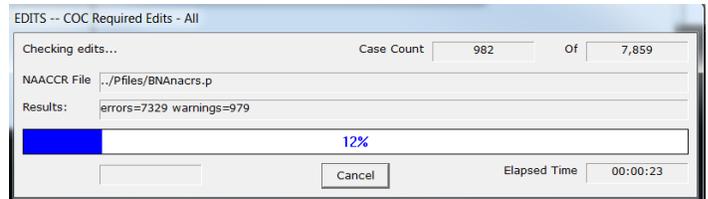

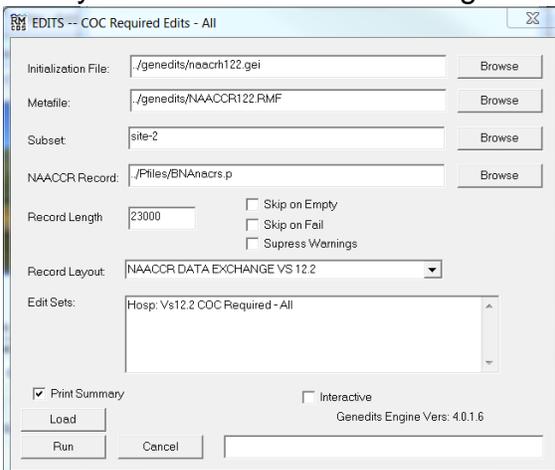

The program will allow you to choose from multiple options on the drop-down menu. You will normally use the 'Standard 2012 Edits error check (3/27/2012 V122B)'. Once you have

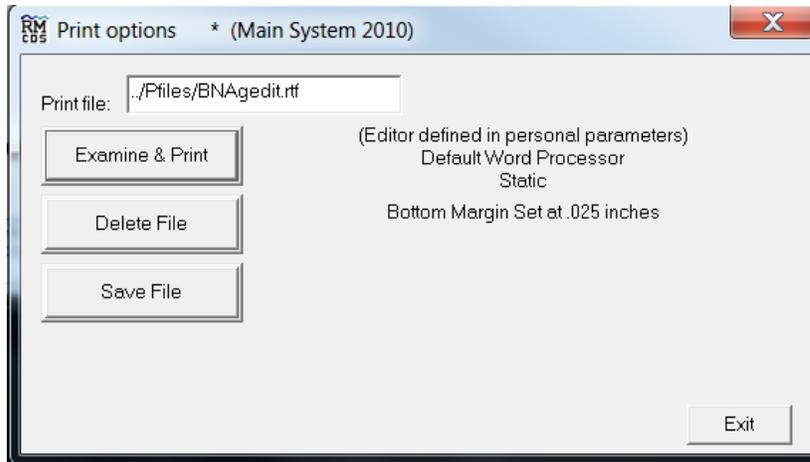

chosen an edit set to run you will need to enter your subset name in the box. You can either type in the name or choose it using the 'Browse' option. When you are ready click the 'Run' button. You will see a white box that says 'Creating NAACCR file' and a second box telling you how many cases are in the file. Click 'OK' to continue.

The edits will now process and you will see two more boxes. The first box will tell you which edit set is running and the second will show you the progress.

When this is finished, you will see a print menu. Choose 'Examine & Print'. Your document will open in your default word processing program. You can now print your report and work on fixing your errors.

The following page is a sample of the edits report.

Metafile: ../genedits/NAACCR122.RMF  
Naaccr file: ../Pfiles/BNAnacrs.p  
Subset: site-2  
Edit Sets:

Hosp: Vs12.2 COC Required - All
