Information Update

The reporting of each HIV/AIDS case is required by Indiana law (IC 16-41-2-1). Patients that are diagnosed in another state and are in Indiana must also be reported in Indiana. All infants born to an HIV+ mother are to be reported, even though their final HIV status is not known until later. It is also important to remember that when a patient progresses from HIV infection stage to a diagnosis of AIDS, this must be reported separately. To assist with more accurately defining the impact of HIV and AIDS on Indiana, deaths of those with HIV should also be reported. For assistance, questions, or case report forms and information, please call 1-800-376-2501.

Technical Notes

Cases in the HIV registry and the AIDS registry are distinct numbers. *When a case meets the surveillance case definition of AIDS, it is moved from the HIV registry to the AIDS registry.* AIDS cases include disease progression from HIV to AIDS.

Some adolescent AIDS cases have pediatric risk factors because they were less than 13 years old when infected.
