327 IAC 7.1-8-7 Wastewater land application rates and records

Authority: IC 13-14-8; IC 13-18-12-4

Affected: IC 13-18-12

Sec. 7. (a) The amount of wastewater to be applied shall not exceed the following except as approved by the commissioner under subdivision (2):

- (1) The annual application rate for domestic septage or mixed load shall not exceed:
 - (A) seventy-six thousand (76,000) gallons per acre based on two hundred (200) pounds of nitrogen, on land being prepared for growing corn, during the next growing season*;
 - (B) thirty-eight thousand (38,000) gallons per acre based on one hundred (100) pounds of nitrogen, on land being prepared for growing soybeans, wheat, or hay, during the next growing season*;
 - (C) nineteen thousand (19,000) gallons per acre based on fifty (50) pounds of nitrogen, on land that is grass, pasture, set aside, or otherwise idle for continued growth*.
- (2) Proposed wastewater annual application rates that:
 - (A) will exceed the maximum amount of nitrogen specified in subdivision (1); or
 - (B) are for crops for which no maximum amount of nitrogen is specified in subdivision (1) may be approved by the commissioner if an equivalent or greater protection to the environment or public health can be shown. The U.S. Environmental Protection Agency formula for annual application rates must be used to compute the proposed rates*.
- (3) The maximum annual rate for grease only shall not exceed ten thousand (10,000) gallons per acre.
- (4) Land application of wastewater shall cease at the site when a total of two hundred thousand (200,000) gallons per acre of wastewater has been applied. The commissioner must then be notified prior to further land application at the site. The commissioner shall require soil tests for heavy metals and PCBs utilizing representative soil samples from the areas of application to ensure that conditions are not created which would endanger public health or have an adverse impact on vegetation and future crop utilization. The initial test results must be submitted to and approved by the commissioner prior to further land application at the site. The initial test results will be used to determine if and at what frequency tests for heavy metals and PCBs will be required by the commissioner from the approval holder in the future to ensure that conditions are not created which would endanger public health or have an adverse impact on vegetation and future crop utilization.
- (5) The wastewater must be surface spread or injected uniformly to prevent overlapping. Spot dumping from stationary vehicles is not permitted.
- (6) The operator must keep an operating record of the amount of wastewater applied. This record must be:
 - (A) updated each application day; and
 - (B) located at the permitted wastewater management business address and made available to representatives of the commissioner during normal business hours for inspection.

(b) For each day that wastewater is land applied the operator must record and retain for five (5) years on a land application report form information as follows:

Land Application for the ____ Quarter of ____							
Business Name: _____							
Business Permit Number: _____							
Site ID Number & County: _____				Page ____ of ____

327 IAC 7.1-8-9 Land application of wastewater; prohibitions; and management practices

Authority: IC 13-14-8; IC 13-18-12-4

Affected: IC 13-18-12

Sec. 9. (a) The land application of wastewater must be performed only in accordance with the following:

(1) No domestic septage or mixed load may be disposed at a land application site unless the domestic septage or mixed load has been treated to reduce pathogens prior to disposal as follows:

(A) If the load is domestic septage only, the pH must be raised to twelve (12) or higher by addition of alkaline material and, without the addition of more alkaline material, shall remain at twelve (12) or higher for at least thirty (30) minutes. This test must be done twice, at the start of thirty (30) minutes and at the end of thirty (30) minutes.

(B) If the load is a mixed load, then the pH must be raised to twelve (12) or higher by addition of alkaline material and, without the addition of more alkaline material, shall remain at twelve (12) or higher for at least two (2) hours. This test must be done twice, at the start of two (2) hours and at the end of two (2) hours.

(C) Processes to reduce pathogens other than lime stabilization may be utilized only as listed and described in 40 CFR 257, Appendix II A.

(D) Any process to reduce pathogens in domestic septage or a mixed load other than lime stabilization must be approved by the commissioner prior to use based on a plan submitted by the approval holder specifying how that specific treatment process will be utilized.

(2) Grease must not be disposed of at any land application site unless injection or incorporation into the soil occurs within six (6) hours after application.

(3) Each container of wastewater applied to the land shall be monitored by the operator for compliance with the treatment process for domestic septage, mixed loads, or the land application method utilized under subdivision (2) for grease.

(4) Land application is prohibited under any of the following environmental conditions:

(A) When either or both of the following occurs:

(i) The surface soil temperature is less than thirty-two (32) degrees Fahrenheit at the time of intended application.

(ii) The site is snow covered.

(B) When the moisture holding capacity of the soil has been exceeded.

(C) Under any other conditions that would result in, or are likely to result in, run-off of wastewater from the site of application.

(5) Under no conditions shall wastewater be discharged or allowed to drain to the waters of the state. Wastewater shall not be applied to:

(A) road ditches; or

(B) swales, sink holes, field depressions, or channels that carry running water during snow melt or rainfall.

(6) Wastewater that is surface applied shall not be allowed to pool, pond, or remain as a liquid on the ground for more than twenty-four (24) hours after application.

(7) Injection of wastewater below the surface of the land must leave no significant amount of the wastewater present on the land within one (1) hour after application.

(8) All wastewater must be disposed so that no threat to human health or the environment is created.

(b) Land that is used for the application of a mixed load or grease must not be used for the production of any food crop unless

the soil is tested yearly and the results found acceptable under 40 CFR 257.3-5(a)(1), using the definitions found in 40 CFR 257.3-5(c). The test results must be submitted to IDEM on a yearly basis. The limitations and restrictions regarding land use and crop management also must be followed.

(c) Land that is used for the application of only domestic septage may be used for the production of food crops when the limitations and restrictions regarding land use and crop management contained in section 10 of this rule are followed.
