Rule 4.3. 2005 Indiana Residential Code

675 IAC 14-4.3-1 Adoption by reference; title; purpose
Authority: IC 22-13-2-2; IC 22-13-2-13
Affected: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 1. (a) Those certain documents being titled the 2003 International Residential Code for One and Two Family Dwellings, fifth printing, and Chapter 43 of the 2006 International Residential Code for One and Two Family Dwellings, first printing, published by the International Code Council, 5203 Leesburg Pike, Suite 708, Falls Church, Virginia 22041-3401, are hereby adopted by reference as if fully set out in this rule save and except those revisions made in this rule.

(b) This rule shall be:
(1) known as the Indiana Residential Code, 2005 edition; and
(2) published, except incorporated documents, by the department of homeland security for general distribution and use under that title.

Wherever the term "this code" is used throughout this rule, it shall mean the Indiana Residential Code, 2005 edition.

(c) This rule is available for reference and review at the Department of Homeland Security, Indiana Government Center-South, 402 West Washington Street, Room W246, Indianapolis, Indiana 46204.

(d) The purpose of this code is to provide minimum requirements for safety and to safeguard property, public safety, and general welfare through affordability, by regulating and controlling the design, construction, installation, and quality of materials of residential structures as regulated by this code. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-1; filed Jun 13, 2005, 3:00 p.m.: 28 IR 3256, eff 90 days after filing with the Secretary of State; filed Mar 6, 2008, 11:13 a.m.: 20080402-IR-675070483FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254FRA)

675 IAC 14-4.3-2 Chapter 1; administration
Authority: IC 22-13-2-2; IC 22-13-2-13
Affected: IC 4-21.5; IC 4-22-7-7; IC 22-12-1-16; IC 22-12-1-17; IC 22-12-7; IC 22-13-2-7; IC 22-13-5; IC 22-14; IC 22-15; IC 25-4; IC 25-31; IC 36-7

Sec. 2. Delete Chapter 1 and substitute as follows: (a) SECTION R101 Application is added to read as follows: SECTION R101 APPLICATION

The provisions of this code apply to the construction, prefabrication, alteration, addition, and remodel of detached one or two family dwellings and one family townhouses not more than 3 stories in height and their accessory structures.

This code does not apply to manufactured homes as defined in SECTION R202, SECTION AE201, and IC 22-12-1-16 except as addressed in APPENDIX E.

This code does not apply to mobile structures as defined in IC 22-12-1-17.

Townhouses are classified as Class 1 structures and detached one and two family dwellings and their accessory structures are classified as Class 2 structures.

Provisions in the appendices are not enforceable unless specifically adopted.

The codes and standards referenced in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and referenced codes and standards, the provisions of this code shall apply.

EXCEPTION: Where the enforcement of a code provision would violate the listing of the equipment, appliance, manufacturer's instructions or certification of engineered products by a registered architect registered under IC 25-4 or a professional engineer registered under IC 25-31, the conditions of the listing, manufacturer's instructions, or professional certification by a registered architect or professional engineer shall apply.

(b) SECTION R102 is added to read as follows: SECTION R102 APPEALS AND INTERPRETATIONS
Appeals from orders issued by the Fire Prevention and Building Safety Commission, the state building commissioner, or the state fire marshal are governed by IC 4-21.5 and IC 22-12-7. Appeals from orders by a local unit of government are governed by IC 22-13-2-7 and local ordinance. Upon the written request of an interested person, the office of the state building commissioner may issue a written interpretation of a building law. The written interpretation as issued under IC 22-13-5 binds the interested person and the county or municipality with whom the interested person has the dispute until overruled under IC 4-21.5. A written interpretation of a building law binds all counties and municipalities if the office of the state building commissioner publishes the written interpretation of the building law in the Indiana Register under IC 4-22-7-7(b).

(c) SECTION R103 is added to read as follows: SECTION R103 PLANS
Plans shall be submitted for Class 1 structures as required by the General Administrative Rules (675 IAC 12-6) and for Class 2 structures as required by local ordinance.

(d) SECTION R104 is added to read as follows: SECTION R104 EXISTING CONSTRUCTION
For existing construction, see the General Administrative Rules (675 IAC 12-4) and local ordinance.

(e) SECTION R105 is added to read as follows: SECTION R105 ADDITIONS AND ALTERATIONS
Additions and alterations to any structure shall conform to that required for a new structure without requiring the existing structure to comply with all the requirements of this code. Additions or alterations shall not cause an existing structure to become unsafe.

(f) SECTION R106 is added to read as follows: SECTION R106 ALTERNATIVE MATERIALS, METHODS, AND EQUIPMENT
SECTION R106.1 ALTERNATE MATERIALS, METHODS, AND EQUIPMENT
The provisions of this code are not intended to limit the appropriate use of materials, appliances, equipment, or methods of design or construction not specifically prescribed by this code. The building official shall determine equivalence of the proposed alternate materials, appliances, equipment, or method of design or construction of that prescribed in this code in suitability, quality, strength, effectiveness, fire resistance, durability, dimensional stability, safety, and sanitation on the basis of evidence and/or tests as described in R106.2 and R106.3, as suitable to be approved. For Class 1 structures, alternate materials, methods, equipment, and design shall be as required by the General Administrative Rules (675 IAC 12-6-11). Compliance with specific provisions of the Indiana Building Code (675 IAC 13) or the Indiana Plumbing Code (675 IAC 16) in lieu of the requirements of this code shall be permitted as an alternate.

SECTION R106.2 EVIDENCE
The building official may require that evidence or proof be submitted to substantiate any claims that may be made regarding the proposed alternate.

SECTION R106.3 TESTS AND STANDARDS
The determination of equivalence shall be based on design or test methods or approved standards. In addition, the building official may accept as supporting data to assist in this determination duly authenticated reports from the Building Officials and Code Administrators International, Inc., Southern Building Code Congress International, Inc., International Conference of Building Officials, the International Code Council, Inc., or their successors, or acceptance documents from the U.S. Department of Housing and Urban Development, the certification of a registered architect registered under IC 25-4 or a professional engineer registered under IC 25-31, or the General Administrative Rules (675 IAC 12).

Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the building official shall have the authority to require tests as evidence of compliance to be made at no expense to the jurisdiction. Test methods shall be as specified in this code or by other recognized test standards. Tests shall be performed by an approved agency. Reports of such test shall be retained by the building official for a period required for retention of public records.

(g) SECTION R107 is added to read as follows: SECTION R107 WORKMANSHIP
General Workmanship. All construction methods shall be accepted practices to ensure livable and safe housing and shall demonstrate acceptable workmanship. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-2; filed Jun 13, 2005, 3:00 p.m.; 28 IR 3256, eff 90 days after filing with the Secretary of State; readopted filed Aug 4, 2011, 8:35 a.m.; 20110831-IR-675110254RFA)

Sec. 3. Change Section R202, Definitions, as follows:
(1) Change the definition of ACCESSORY STRUCTURE to read as follows: In one and two family dwellings and for the purpose of APPENDIX E, structures not more than 3 stories high with separate means of egress, and the use of which is incidental to that of the main building and which is located on the same lot.
(2) Change the definition of ALTERATION by deleting "other than repair".
(3) Change APPROVED to read as follows: APPROVED means, as to materials, equipment, appliances, methods of design, and types of construction, acceptance by the building official by one (1) of the following methods:
   (1) investigation or tests conducted by recognized authorities;
   (2) investigation or tests conducted by technical or scientific organizations; or
   (3) accepted principles.
   The investigation, tests, or principles shall establish that the materials, equipment, appliances, methods of design, and types of construction are safe for their intended purpose.
(4) Change the definition of BUILDING, EXISTING to read as follows: BUILDING, EXISTING. Existing building is a building or structure erected prior to the adoption of this code.
(5) Change the definition of BUILDING OFFICIAL to read as follows: BUILDING OFFICIAL, as used in this code, shall be the local official or officials as designated in local ordinance, except it shall be the state building commissioner for Industrialized Building Systems under 675 IAC 15 and IC 22-15 and for plan review for townhouses under 675 IAC 12 and IC 22-15.
(6) Delete the definition of CONSTRUCTION DOCUMENTS and substitute to read as follows: CONSTRUCTION DOCUMENTS. For construction documents, see the General Administrative Rules (675 IAC 12) for Class 1 structures and local ordinance for Class 2 structures.
(7) Delete, from the definition of ESSENTIALLY NONTOXIC TRANSFER FLUIDS, "; and FDA-approved boiler water additions for steam boilers".
(8) Change the definition of EXISTING INSTALLATIONS to read as follows: Any system regulated by this code that was legally installed prior to the effective date of this code.
(9) Add a definition of FAMILY after the definition of FACTORY-BUILT CHIMNEY to read as follows: FAMILY means an individual or 2 or more persons related by blood or marriage and/or a group of not more than 10 persons (excluding servants) who need not be related by blood or marriage living together in a dwelling unit.
(10) Change the definition of FIREBLOCKING to read as follows: Building materials, or materials labeled for use as fireblocking, installed to resist the free passage of flame to other areas of the building through concealed spaces.
(11) Add, in the definition of FOAM PLASTIC INSULATION, "of" between "consisting" and "open".
(12) Add a definition of FOUNDATION WALL after FOAM PLASTIC INSULATION to read as follows: FOUNDATION WALL means the supporting element(s) that extend from the top of the footing to the bottom of the sill plate.
(13) Delete, in the definition of HEATING DEGREE DAY (HDD), "acceptable to the code" and substitute "approved by the building".
(14) Add the following definitions after INSULATING SHEATHING:
   INTERNATIONAL BUILDING CODE means the Indiana Building Code (675 IAC 13).
   ICC ELECTRICAL CODE means the Indiana Electrical Code (675 IAC 17).
   INTERNATIONAL FIRE CODE means the Indiana Fire Code (675 IAC 22).
   INTERNATIONAL MECHANICAL CODE means the Indiana Mechanical Code (675 IAC 18).
   INTERNATIONAL PLUMBING CODE means the Indiana Plumbing Code (675 IAC 16).
(15) Delete the definition of LABELED and substitute to read as follows: LABELED. Equipment or materials to which has been attached a label, symbol, or other identifying mark of an organization engaged in product evaluation that maintains periodic inspection or production of labeled equipment or materials and by whose labeling the manufacturer indicates...
compliance with appropriate standards or performance in a specified manner.

(16) Delete the definition of LISTED AND LISTING and substitute to read as follows: LISTED AND LISTING. Equipment or materials included in a list published by an organization engaged in product evaluation that maintains periodic inspection of production of listed equipment or materials and whose listing states either that the equipment or material meets appropriate standards or has been tested and found suitable for use in a specified manner.

(17) Add a definition of MONO-PITCH TRUSS after MODIFIED BITUMEN ROOF COVERING to read as follows: MONO-PITCH TRUSS means a truss with a top chord having a single uninterrupted slope of more than 1.5/12.

(18) Add a definition of NATIONAL ELECTRICAL CODE after MULTIPLE STATION SMOKE ALARM to read as follows: NATIONAL ELECTRICAL CODE means the Indiana Electrical Code (675 IAC 17).

(19) Add a definition of NFPA 70 after NATURAL DRAFT SYSTEM to read as follows: NFPA 70 means the Indiana Electrical Code (675 IAC 17).

(20) Delete the definition of PERMIT.

(21) Delete, in the definition of PLUMBING, ", repairs, maintenance".

(22) Delete, in the definition of PLUMBING APPURTENANCE, ", maintenance, servicing, economy".

(23) Delete the definition of POTABLE WATER and substitute to read as follows: POTABLE WATER. Water that at the point of use is acceptable for human consumption under drinking water standards adopted by the Water Pollution Control Board at 327 IAC 8.

(24) Change the definition of RECESSED LIGHT after RECEPTOR to read as follows: RECESSED LUMINAIRE. For purposes of Chapter 11, RECESSED LUMINAIRE means a luminaire that by design penetrates the thermal boundary of the building.

(25) Add a definition for REGISTERED DESIGN PROFESSIONAL to read as follows: REGISTERED DESIGN PROFESSIONAL means an architect who is registered under IC 25-4 or a professional engineer who is registered under IC 25-31.

(26) Delete the definition of ROOF REPAIR.

(27) Add a definition of SILL PLATE after the definition of SIDE VENT to read as follows: SILL PLATE means in frame construction the bottom rough structural member that rests on the foundation.

(28) Add a definition of SLAB-ON-GRADE FLOOR INSULATION after SKYLIGHT AND SLOPED GLAZING to read as follows: SLAB-ON-GRADE FLOOR INSULATION means insulation around the perimeter of the floor slab or its supporting foundation.

(29) Add a definition of SOLE PLATE after the definition of SOLAR HEAT GAIN COEFFICIENT (SHGC) to read as follows: SOLE PLATE means in frame construction the horizontal member of a frame wall or partition that rests on any type floor.

(30) Add a definition of SMOKE ALARM after SLOPE to read as follows: SMOKE ALARM an alarm device that is responsive to smoke.

(31) Add a definition of TACTILE NOTIFICATION APPLIANCE after SWEEP to read as follows: TACTILE NOTIFICATION APPLIANCE a notification appliance that alerts by sense of touch or vibration.

(32) Amend the definition of TOWNHOUSE to delete the text and insert to read as follows: TOWNHOUSE has the meaning ascribed thereto in IC 22-12-1-5(c).

(33) Change, in the definition for UNUSUALLY TIGHT CONSTRUCTION, 3, to read as follows: 3. Caulking or sealants are applied to joints and openings in the thermal envelope of the building such as: joints around window and door frames; between supporting structure and sill and sole plates; wall-ceiling joints; and at penetrations for plumbing, electrical and gas lines.

(34) Add a definition of WORKMANSHIP after the definition of WOOD STRUCTURAL PANEL to read as follows: WORKMANSHIP means the installation, application, or construction of materials, equipment, or fixtures as they are intended to be incorporated into a one-or-two-family dwelling as mandated by this code, the manufacturer, or industry standards. Items that are aesthetic in nature and that do not affect the livability, intended use, or the safety of a structure are excluded.

675 IAC 14-4.3-11 Section R301.2.2.1.1; alternate determination of seismic design category

Sec. 11. Change SECTION R301.2.2.1.1 as follows: (a) Change the first sentence to read as follows: The Seismic Design Categories and corresponding Short Period Design Spectral Response Accelerations, SD5, are based on soil Site Class D, as defined in the Indiana Building Code, 675 IAC 13.

(b) Change the second sentence to read as follows: If soil conditions are other than Site Class D, the Short Period Design Spectral Response Acceleration, SD5, for a site can be determined according to the Indiana Building Code, 675 IAC 13.

(c) Change the third sentence to read as follows: The value of SD5 determined according to the Indiana Building Code, 675 IAC 13, is permitted to be used to set the Seismic Design Category according to TABLE R301.2.2.1.1, and to interpolate between values in TABLES R602.10.3 and R603.7 and other seismic design requirements of this code.

Sec. 17. Add a subsection to SECTION R301.5 to read as follows: R301.5.1 Live Load Reduction.

1. Tributary floor area. A structural member which supports a tributary floor area of greater than 200 square feet on a given story is permitted to be designed using a reduced uniform floor live load for each qualifying story in accordance with the following formula:

\[ L = L_0 \left( 0.25 + \frac{10.6}{\sqrt{A}} \right) \geq 0.75 \text{ for } A_t > 200 \text{ ft}^2 \]

Where: \( A_t \) is the tributary area of floor surface in square feet supported by the structural member and \( L_0 \) is the floor live load from TABLE R301.5.

2. Multiple stories. When floor, roof, and attic live loads from multiple story levels are applied to a structural member, the live loads may be factored as follows:

\[ L = L_1 + 0.7(L_2 + L_3 + \ldots) \]

Where: \( L_1 \) is the live load from TABLES R301.5 and R301.6 producing the maximum individual load effect, and \( L_2, L_3, \) and so forth are live loads from other sources or stories in accordance with TABLES R301.5 and R301.6.

Sec. 26. Change the title and text of Section R309 as follows:
(1) Change the title of Section R309 to read as follows: GARAGES, CARPORTS, OR ACCESSORY STRUCTURES.
(2) Change the text of Section R309.2 to read as follows: The garage shall be separated from the residence and its attic area by a smoke separation of not less than 1/2 inch (13 mm) gypsum board applied to the garage side of the framing.
   Exception: Pull down stairs may be installed in garage/attic separations when installed in a manner that resists the passage of smoke.
(3) Change the second paragraph of Sections R309.3 and R309.4 to read as follows: The area of floor used for parking of automobiles or other vehicles shall be sloped to facilitate the movement of liquids to an approved drain or toward the main vehicle entry doorway.
(4) Delete the title and text of Section R309.5, Flood hazard areas, and substitute to read as follows: R309.5 Detached garages, carports, or accessory structures.
R309.5.1 Separation. Detached garages, carports, and accessory structures shall be separated from dwellings by not less than 6 feet (1,829 mm) of open space, except that such space may be roofed in accordance with Chapters 8 and 9 of this code. Detached garages, carports, and accessory structures separated from dwellings by less than 6 feet (1,829 mm) of open space shall be considered the same as attached garages, carports, and accessory structures. In no case shall garages, carports, or accessory structures be attached to the dwelling when the footings of the structure to be attached are above the frost line and the adjacent footings of the dwelling are at or below the frost line unless approved by the building official.
R309.5.2 Requirements. Detached garages, detached carports, or accessory structures shall be constructed to applicable sections of this code unless otherwise noted in TABLE R309. Any habitable area(s) located within a detached garage or accessory structure shall meet all applicable sections of this code and shall be provided with an exit door as specified in Section R311.

Sec. 27. Change Section R310 as follows:
(1) Change the first sentence of Section R310.1 to read as follows: Every sleeping room shall have at least one openable emergency escape and rescue opening that opens directly to the exterior.
(2) Delete the second sentence of Section R310.1 without substitution.
(3) In Section R310.1.2, change "24 inches (610 mm)" to "22 inches (559 mm)".
(4) Add Section R310.1.5 to read as follows: R310.1.5 Sleeping room replacement window alterations. When replacing existing sleeping room windows, at least one of the replacement windows within that sleeping room shall comply with Section R310.5. Replacement windows that do not meet the current emergency escape requirements of Section R310, without structural alterations to the dwelling, may be installed as long as they meet the following requirements.
   1. Replacement window installation shall not reduce the existing net clear opening by more than 6 inches horizontally and 6 inches vertically, except that awning replacement windows shall not reduce the existing net clear opening by more than 3 inches vertically.
   2. In no case shall the replacement window net clear opening height be less than 22 inches (559 mm) and the net clear opening width be less than 20 inches (508 mm).
   3. Double hung or sliding replacement windows shall have both sashes removable without the use of a key or tool. Single hung installations are not allowed by this section.
   4. Casement and awning replacement windows may obtain the required net clear opening with the use of egress hardware.
   5. If the replacement window cannot meet the minimum requirements listed in subdivisions 1, 2, 3, and 4, the existing window shall be replaced with a like window without reducing the existing net clear opening.
(5) Add Section R310.3.1 to read as follows: R 310.3.1 Door swing. In areas subject to snow or ice accumulation, doors installed at the bottom of bulkhead enclosures to basements that serve as escape and rescue openings shall swing into the structure.
(6) Add Section R310.5 to read as follows: R310.5 Emergency escape windows under decks and porches. Emergency escape windows are allowed to be installed under decks and porches provided the location of the deck or porch allows an unobstructed passageway, not less than 30 inches (762 mm) high, 30 inches (762 mm) wide and not more than 20 feet (6.1 m) in length, to a yard or court.

R311.4.3 Landings at exterior doors. There shall be a landing on each side of each exterior door. The width of each landing shall not be less than the width of the door served. Every landing shall have a minimum dimension of 36 inches (914 mm) measured in the direction of travel. Exterior landings shall be permitted to have a slope not to exceed 0.25 units vertical in 12 units horizontal.
R311.4.3.1 Landings at the required exit door. Landings on the interior side of the required exit door shall not be more than 1.5 inches (38 mm) lower than the top of the threshold. Landings on the exterior side of the required exit door shall not be more than 8.25 inches (209 mm) below the top of the threshold. Where exterior landings serving the required exit door are not at grade level, they shall be provided with access to grade by steps, a stairway in accordance with Section R311.5 or a ramp in accordance with Section R311.6.
R311.4.3.2 Landings at the non-required exterior door. Doors, other than the required exit door, shall have landings installed not lower than 8.25 inches (209 mm) below the top of the threshold.

Exceptions:
1. Where the distance in height, measured between the top of the threshold and a floor below, is 16.5 inches (418 mm) or less, a single step with tread depth of at least 11 inches (279 mm) is permitted to be installed instead of a landing.
2. When a stairway of three or fewer risers is located at a non-required exterior door, a landing is not required for the exterior side of the non-required exterior door, provided the door, other than the screen or storm door, does not swing over the stairway.

Affected: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7
Sec. 37. Delete the text of Section R313 and substitute to read as follows: R313.1 Labeling. Each smoke alarm shall be listed:

R313.2 Required smoke alarm locations. At least one smoke alarm shall be installed in each of the following locations:

(a) In the living area remote from the kitchen and cooking appliances. Smoke alarms located within 20 feet (6.1 m) horizontally of a cooking appliance must incorporate a temporary silencing feature or be photoelectric type.

(b) In each room designed for sleeping.

(c) On the ceiling of the upper level near the top or above each stairway, other than a basement stairway, in any multistory dwelling. The alarm shall be located so that smoke rising in the stairway cannot be prevented from reaching the alarm by an intervening door or obstruction.

(d) On the basement ceiling near the stairway.

R313.2.1 Alterations and additions. When interior alterations or additions requiring a permit occur, or when one or more sleeping rooms are added or created in existing dwellings, the individual dwelling unit shall be provided with smoke alarms located as required for new dwellings; the smoke alarms shall be interconnected and hard wired.

Exceptions:

1. Smoke alarms in existing areas shall not be required to meet the requirements of R313.5 where the alterations do not result in the removal of the interior wall or ceiling finishes exposing the structure unless there is an attic, crawlspace, or basement available that could provide access for hard wiring and interconnection without the removal of interior finishes.

2. Repairs are exempt from the requirements of this section.

R313.3 Prohibited smoke alarm locations. A smoke alarm required under this section shall not be placed:

1. within 3 feet (914 mm) horizontally from any grille moving conditioned air within the living space; or

2. in any location or environment that is prohibited by the terms of the listing.

R313.4 Mounting requirements. Smoke alarms required by Section R313.2 shall be mounted in accordance with their listing, installation instructions, and the requirements of this section.

R313.4.1 Flat Ceilings. In rooms with flat, peaked sloping or single slope ceilings with a slope of less than 1.5/12, smoke alarms shall be mounted either:

1. on the ceiling at least 4 inches (102 mm) from each wall; or

2. on a wall with the top of the alarm not less than 4 inches (102 mm) below the ceiling and not farther from the ceiling than 12 inches (305 mm) or the distance from the ceiling specified in the smoke alarm manufacturer’s listing and installation instructions, whichever is less.

R313.4.2 Peaked Sloping Ceilings. In rooms with peaked sloping ceilings with a slope of 1.5/12 or greater, smoke alarms shall be:

1. mounted on the ceiling or wall within 3 feet (914 mm) measured horizontally, from the peak of the ceiling;

2. at least 4 inches (102 mm), measured vertically, below the peak of the ceiling; and

3. at least 4 inches (102 mm) from any projecting structural element.

R313.4.3 Single Slope Ceilings. In rooms with single slope ceilings with a slope of 1.5/12 or greater, smoke alarms shall be:

1. mounted on the ceiling or wall within 3 feet (914 mm), measured horizontally, of the high point of the ceiling; and

2. not closer than 4 inches (102 mm) from any adjoining wall surfaces or any projecting structural element.

R313.4.4 Visible notification appliances. In addition to the smoke alarms required pursuant to this section, listed visible notification appliances, when installed, shall meet the following:

R313.4.4.1 Candela Rating-Sleeping Room. A visible notification appliance, when installed in a room designed for sleeping, shall have a minimum rating of 177 candela, except that when the visible notification appliance is wall-mounted or suspended more than 24 inches (610 mm) below the ceiling, a minimum rating of 110 candela is permitted.

R313.4.4.2 Candela Rating-Nonsleeping Room. A visible notification appliance, when installed in an area other than a room designed for sleeping, shall have a minimum rating of 15 candela.

R313.5 Connection to Power Source. Each smoke alarm shall be powered from:

1. the electrical system of the home as the primary power source and a battery as a secondary power source; or

2. a battery rated for a 10 year life, provided the smoke alarm is listed for use with a 10 year battery.

Exception: Visible notification appliances are required to operate from the primary power source but are not
required to operate from a secondary power source.

R313.5.1 Circuitry. Each smoke alarm whose primary power source is the home electrical system shall be mounted on an electrical outlet box and be connected by a permanent wiring method to a general branch circuit. The same branch circuit may serve more than one smoke alarm. The branch circuit for the alarm shall not include any switches between the branch circuit overcurrent protective device and the alarm and shall not be protected by a ground-fault circuit-interrupter.

R313.5.2 Interconnection. When more than one smoke alarm is required to be installed within an individual dwelling unit, the alarm devices shall be interconnected in such a manner that the actuation of one alarm will activate all of the alarms in the individual unit.

EXCEPTION: Foam plastic insulation may be installed on the walls of attics and crawlspace with no covering applied provided all the following conditions are met:
1. The maximum thickness/density is within the following:
   a. Maximum 4 inch thickness with a maximum density of 4.0 pcf.
   b. Up to 2 inch thickness with a maximum density of 2.5 pcf.
   c. Up to 1 inch thickness with a maximum density of 2.0 pcf.
2. The maximum flame spread is 25.
3. The maximum smoke development rating is 450.
4. The entry to the attic or crawlspace is made only for service or maintenance (not used for storage).
5. There are not interconnected basement areas.
6. The air in the attic or crawlspace is not circulated to other parts of the building.
7. Where fuel-burning appliances other than direct vent appliances or exposed (not sealed) motors are located more than 10 feet away from the foam insulation in the attic or crawlspace.

The spacing "S" is the tributary load in the girder. It is found by adding the unsupported spans of the floor joists on each side that are supported by the girder and dividing by 2.

Figures under type of loading columns are the allowable girder span.

Type A loading is for a girder supporting 1 floor and a roof.
Type B loading is for a girder supporting 2 floors and a roof.
Type C loading is for a girder supporting 3 floors and a roof.

3Required size of column is based on girder support from 2 sides. Size of footing is based on allowable soil pressure of 2,000 pounds per square foot.

4Footing thickness is based on the use of plain concrete with an ultimate compressive strength of not less than 2,000 pounds per square inch at 28 days. If approved, the footing thickness may be reduced based on an engineered design utilizing higher strength concrete and/or reinforcement.

The sump pit shall be a minimum of 18 inches (457 mm) in diameter or equivalent and a minimum of 24 inches (610 mm) below the bottom of the basement floor. Where a porous layer of gravel, crushed stone, or coarse sand is used between the soil and the concrete floor slab, openings shall be made in the sump pit to allow drainage of that layer. The sump pit shall be capable of positive gravity or mechanical drainage to remove any accumulated water.

EXCEPTION: When a gravity drain system is used a sump pit is not required. Sec. 78.5. (a) Add a sentence to Section R408.1, after the first sentence, to read as follows: The ventilation openings may be located in the rim joist of the exterior wall.

(b) Change the last sentence of Section R408.1 to read as follows: One such ventilation opening shall be within 4 feet (1,219 mm) of each corner of said building. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-78.5; filed Mar 6, 2008, 11:13 a.m.: 20080402-IR-675070483FRA; filed Mar 4, 2009, 1:57 p.m.: 20090401-IR-675080604FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)

675 IAC 14-4.3-79 Section R408.2; openings for under-floor ventilation

Authority: IC 22-13-2-2; IC 22-13-2-13

Sec. 79. Make the following changes to Section R408.2:

(1) Delete the first two (2) sentences of R408.2 without substitution.
(2) Change Exception 1 to read as follows: Ventilation openings to the outdoors are not required if ventilation openings to the interior are provided.

(3) Amend Exception 5 as follows: Delete "Section N1102.1.7" and substitute "Chapter 11 of this code".

(4) Add Exception 6 to read as follows: 6. Ventilation openings are not required when the under-floor space is insulated in accordance with Chapter 11 of this code, the insulation materials comply with Sections R314 and R316 of this code and the ground surface is covered with an approved vapor retarder that extends to the exterior walls and all penetrations. The vapor retarder shall have a minimum thickness of 0.006 inch and shall be installed so that any joints are lapped at least 6 inches (152 mm). Mechanical ductwork shall be uninsulated and shall have no openings into the under-floor space. A hard surface pad with dimensions of at least 16 inches (407 mm) by 16 inches (407 mm), and an electrical receptacle shall be installed to allow for the installation of dehumidification equipment in the event of high humidity conditions in the under-floor spaces. Openings into conditioned space shall be permitted.

(5) Add Exception 7 to read as follows: 7. Ventilation openings are not required when the under-floor space is insulated in accordance with Chapter 11 of this code, the insulation materials comply with Sections R314 and R316 of this code and there is a concrete floor at least 2 inches (51 mm) thick installed on the ground surface of the under-floor space. A vapor retarder, at least 0.006 inch (.152 mm) thick and extending to the exterior walls and penetrations, shall be installed under the concrete floor. Conditioned air shall be circulated through the under-floor space at a rate of at least 1 cfm (10 m³) for each 50 square feet (1.02 L/s) of under-floor space.

AFFECTED: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 80. Change Section R408.3 to read as follows: An access opening 24 inches by 18 inches (610 mm by 457 mm) shall be provided to the under-floor space. When the under-floor space access opening is through a wall, the opening shall be a minimum of 24 inches (609 mm) wide by 16 inches (406 mm) high with an areaway provided for access to the under-floor opening. The areaway shall be not less than 24 inches (609 mm) long parallel to the wall at the access opening by 16 inches (406 mm) wide perpendicular to the wall at the center of the access opening. The bottom of the areaway shall be below the threshold of the access opening. The under-floor access opening shall not be under a door.

Exception: Access may be placed under a doorway provided the step or steps that cover the opening to the crawlspace are attached to the structure at the top with a fixed pin-type hinge, so that, when the step or steps are in the raised position, passage by way of the doorway is restricted.

Sec. 81. Delete the title and text of SECTION R408.6 and substitute to read as follows: Underfloor drainage. In other than Group I soils, underfloor spaces shall be drained to prevent water accumulation by one of the following methods:

1. The underfloor space shall be graded at a slope of not less than 1 inch (25 mm) for each 10 feet (3,048 mm) to a gravity discharge or a sump pit having a minimum size of 18 inches (457 mm) in diameter by 24 inches (610 mm) deep installed below the lowest point of the slope so that, in the event of excess water accumulation, a sump pump can be readily installed.

2. The underfloor space shall be graded at a slope of not less than ½ inch (13 mm) for each 10 feet (3,048 mm) to a gravity discharge or a sump pit having a minimum size of 18 inches (457 mm) in diameter by 24 inches (610 mm) deep installed
below the lowest point of the slope and not less than 3 inches (76 mm) of granular material shall be placed between the ground surface and the vapor retarder so that, in the event of excess water accumulation, a sump pump can be readily installed.

- **a** Spans are given in feet and inches.
- **b** Tabulated values assume #2 grade lumber.
- **c** Building width is measured perpendicular to the ridge. For widths between those shown, spans are permitted to be interpolated.
- **d** NJ-Number of jack studs required to support each end. Where the number of required jack studs equals one, the header is permitted to be supported by an approved framing anchor attached to the full-height wall stud and to the header.
- **e** Use 30 psf ground snow load for cases in which ground snow load is less than 30 psf and the roof live load is equal to or less than 20 psf.

**Affected:** IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 87. Add an exception to SECTION R502.8.1 to read as follows: EXCEPTION: In 2 x 8 and larger solid lumber joists, holes up to 50 percent of the actual joist depth may be drilled at the center of the joist depth in the second and fifth sixths of the joist span. When the joist spans 90 percent or less of its maximum allowed span per TABLE R502.3.1(1) or R502.3.1(2), such holes may also be located in the center third of the joist span. Such hole shall be no closer than 6 inches (152 mm) from any other hole. Except for end notches, no notches may be in the same half of the span as a hole allowed by this exception. *(Fire Prevention and Building Safety Commission; 675 IAC 14-4-3-87; filed Jun 13, 2005, 3:00 p.m.; 28 IR 3275, eff 90 days after filing with the Secretary of State; readopted filed Apr 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)*

1. In the first sentence, delete "all walls and interior braced wall lines," and insert "an exterior wall line," and, after "braced wall panel lengths", insert "for such a wall line".
2. In the second sentence, after "R602.10.5", insert "for such a wall line".
3. Add an exception to read as follows: Exception: Vertical wall segments in the first of one or first of two story buildings next to garage openings shall be permitted to have 6:1 height-to-width ratio (with height being measured from top of header to sill plate) when constructed in accordance with the following provisions. Each panel shall have a length of not less than 16 inches (406 mm) and a height of not more than 10 feet (3,048 mm). Each panel shall be sheathed on one face with a single layer of 3/8 inch minimum thickness (9.5 mm) wood structural panel sheathing nailed with 8d common or galvanized box nails in accordance with Figure R602.10.5(2). The wood structural panel sheathing shall extend up over the solid sawn or glued-laminated header and shall be nailed in accordance with Figure R602.10.5(2). The header shall extend between the inside faces of the first full-length outer studs of each panel. The clear span of the header between the inner studs of each panel shall be not less than 6 feet (1,829 mm) and not more than 18 feet (5,486 mm) in length. A strap with an uplift capacity of not less than 1,000 pounds (454 kg) shall fasten the header to the side of the inner studs opposite the sheathing. Two anchor bolts shall be installed in accordance with Section R403.1.6, and plate washers shall be a minimum of 2 inches by 2 inches by 3/16 inch (51 mm by 51 mm by 4.8 mm) thick and shall be used on each bolt. This exception is only permitted in Seismic Design Categories A-C.

The ¾ inch (19 mm) air cavity shall be drained to the exterior of the structure at intervals of not more than 33 inches (838 mm) on center. Each drain shall be not less than ¾ inch (4.8 mm) in diameter, located immediately above the flashing. For dwellings with crawl spaces, the air cavity may be drained as shown in FIGURE R703.7.6(1). For dwellings with basements, the air cavity may be drained as shown in FIGURE R703.7.6(2).
Sec. 122. In SECTION 703.8, delete Item 1 and substitute to read as follows: 1. Corrosion-resistant flashing shall be provided at the sill, jambs, and top of all windows and door openings, applied shingle fashion in such a manner as to be leakproof. Tops of trim over these openings will also be head flashed in a manner as to direct water over the exterior wall cladding and not behind such trim. This head flashing may be omitted when protected by a soffit, porch, or similar overhang. Windows, indicated by the manufacturer as self-flashing, having a continuous lap of not less than 1 inch (28 mm) over the sheathing material or building paper around the entire perimeter of the opening, including corners, do not require additional flashing. SECTION N1101; GENERAL N1101.1 Scope.
This chapter regulates the energy efficiency for the design and construction of buildings regulated by this code.
Exception: Portions of the building envelope that do not enclose conditioned space are exempt from building thermal envelope provisions of this chapter.

N1101.2 Compliance. Compliance shall be demonstrated by meeting the requirements of this chapter. Climate zones from Figure N1101.2 or Table N1101.2 shall be used in determining the applicable requirements from this chapter.
ONE AND TWO FAMILY DWELLING CODE

N1101.3 Identification. Materials, systems and equipment shall be identified in a manner that will allow a determination of compliance with the applicable provisions of this chapter.

N1101.4 Building thermal envelope insulation. Each piece of building thermal envelope insulation 12 inches (305 mm) or more wide shall bear the manufacturer’s R-value identification mark. For building thermal insulation where no identification mark is used, the insulation installer shall provide a certification listing the type, manufacturer and R-value of insulation installed in each element of the building thermal envelope. In addition, the following information shall be provided by the installer on the certificate:

1. For blown or sprayed insulation (fiberglass and cellulose), the initial installed thickness, settled thickness, settled R-value, installed density, coverage area and number of bags installed shall be listed on the certification.
2. For sprayed polyurethane foam (SPF) insulation, the installed thickness of the area covered and R-value of installed thickness shall be listed on the certificate.

The insulation installer shall sign, date and post the certificate in a conspicuous location on the job site.

N1101.4.1 Blown or sprayed roof/ceiling insulation. The thickness of blown in or sprayed roof/ceiling insulation (fiberglass or cellulose) shall be written in inches (mm) on markers that are installed at least one for every 300 ft² (28 m²) throughout the attic space. The markers shall be affixed to the trusses or joists and marked with the minimum initial installed thickness with numbers a minimum of 1 inch (25 mm) high. Each marker shall face the attic access opening. Spray polyurethane foam thickness and installed R-value shall be listed on the certificate provided by the insulation installer.

N1101.4.2 Insulation mark installation. Insulating materials shall be installed such that the manufacturer’s R-value mark is readily observable upon inspection.

N1101.5 Fenestration product rating. Fenestration products (windows, doors and skylights) shall bear a label and certification from the manufacturer that the product has been tested by an accredited independent laboratory and that the testing determined that the U-factors are in accordance with NFRC 100. Products lacking such a labeled U-factor shall be assigned a default U-factor from Tables N1101.5(1) and N1101.5(2).

N1101.6 Insulation product rating. The thermal resistance (R-value) of insulation shall be determined in accordance with the 16 CFR 460 as in effect on March 1, 2011, in units of h • ft² • °F/Btu at a mean temperature of 75°F (24°C).

N1101.7 Installation. All materials, systems and equipment shall be installed in accordance with the manufacturer's installation instructions and the provisions of this chapter.

N1101.7.1 Protection of exposed foundation insulation. Insulation applied to the exterior of basement walls, crawl space walls and the perimeter of slab-on-grade floors shall have a rigid, opaque and weather-resistant protective covering to prevent the degradation of the insulation's thermal performance. The protective covering shall cover the exposed exterior insulation and extend a minimum of six (6) inches (152 mm) below grade.

N1101.8 Certificate. A permanent certificate shall be posted on or in the electrical distribution panel. The certificate shall not cover or obstruct the visibility of the circuit directory label, service disconnect label or other required labels. The certificate shall be completed by the builder or registered design professional. The certificate shall list the predominant R-values of insulation installed in or on ceiling/roof, walls, foundation (slab, basement wall, crawl space wall and/or floor), ducts outside conditioned spaces, and U-factors for fenestration. Where there is more than one value for each component, the certificate shall list the value covering the largest area. The certificate shall list the types and efficiencies of heating, cooling and service water heating equipment. Where a gas-fired unvented room heater, electric furnace, and/or baseboard electric heater is installed in the residence, the certificate shall list "gas-fired unvented room heater", "electric furnace", or "baseboard electric heater" as appropriate. An efficiency shall not be listed for gas-fired unvented room heaters, electric furnaces, or electric baseboard heaters.

SECTION N1102; BUILDING THERMAL ENVELOPE

N1102.1 Insulation and fenestration criteria. The building thermal envelope shall meet the requirements of Table N1102.1 based on the climate zone specified in Table N1101.2.

N1102.1.1 R-value computation. Insulation material used in layers, such as framing cavity insulation and insulating sheathing, shall be summed to compute the component R-value. The manufacturer's settled R-value shall be used for blown insulation. Computed R-values shall not include an R-value for other building materials or air films.

N1102.1.2 U-factor alternative. An assembly with a U-factor equal to or less than that specified in Table N1102.1.2 shall be permitted as an alternative to the R-value in Table N1102.1.

N1102.1.3 Total UA alternative. If the total building thermal envelope UA (sum of U-factor times assembly area) is less than or equal to the total UA resulting from using the U-factors in Table N1102.1.2 (multiplied by the same assembly area as in the proposed building), the building shall be considered in compliance with Table N1102.1. The UA calculation shall be done using a method in accordance with the Indiana Energy Conservation Code, 675 IAC 19-4, and shall include the thermal bridging effects of framing materials. Calculation procedures used to comply with this section shall be by use of approved computer software tools capable of calculating the total building thermal envelope UA that differs between "standard reference design" and the proposed design. REScheck, from the US Department of Energy, is an example of an approved software tool.

\(^a\) R-values are minimums. U-factors are maximums. R-19 batts compressed in to a nominal 2 × 6 framing cavity such that the R-value is reduced by R-1 or more shall be marked with the compressed batt R-value in addition to the full thickness R-value.

\(^b\) The fenestration U-factor column excludes skylights.
c. The first R-value applies to continuous insulation, the second to framing cavity insulation; either insulation meets the requirement.
d. R-5 shall be added to the required slab edge R-values for heated slabs.
e. Or insulation sufficient to fill the framing cavity, R-19 minimum.
f. "13+5" means R-13 cavity insulation plus R-5 insulated sheathing. If structural sheathing covers 25% or less of the exterior, R-5 sheathing is not required where structural sheathing is used. If structural sheathing covers more than 25% of exterior, structural sheathing shall be supplemented with insulated sheathing of at least R-2.
g. The second R-value applies when more than half the insulation is on the interior.

a. Nonfenestration U-factors shall be obtained from measurement, calculation or an approved source.
b. When more than half the insulation is on the interior, the mass wall U-factors shall be a maximum of 0.10 in zone 4 and the same as the frame wall U-factor (0.057) in zone 5.

### N1102.2 Specific insulation requirements.

#### N1102.2.1 Ceilings with attic spaces. When Section N1102.1 would require R-38 in the ceiling, R-30 shall be deemed to satisfy the requirement for R-38 wherever the full height of uncompressed R-30 insulation extends over the wall top plate at the eaves. Similarly R-38 shall be deemed to satisfy the requirement for R-49 wherever the full height of uncompressed R-38 insulation extends over the wall top plate at the eaves. This reduction shall not apply to the U-factor alternative approach in Section N1102.1.2 and the Total UA alternative in Section N1102.1.3.

#### N1102.2.2 Ceilings without attic spaces. Where Section N1102.1 would require insulation levels above R-30 and the design of the roof/ceiling assembly does not allow sufficient space for the required insulation, the minimum required insulation for such roof/ceiling assemblies shall be R-30. This reduction of insulation from the requirements of N1102.1 shall be limited to five hundred (500) square feet (46 m²) or twenty (20) percent of the total insulated ceiling area, whichever is less. This reduction shall not apply to the U-factor alternative approach in Section N1102.1.2 and the Total UA alternative in Section N1102.1.3.

#### N1102.2.3 Access hatches and doors. Access hatches from conditioned spaces to unconditioned spaces (e.g., attics and crawl spaces) shall be weatherstripped and insulated to a level equivalent to the insulation on the surrounding surfaces. Access shall be provided to all equipment which prevents damaging or compressing the insulation. A wood framed or equivalent baffle or retainer is required to be provided when loose fill insulation is installed, the purpose of which is to prevent the loose fill insulation from spilling into the living space when the attic access is opened and to provide a permanent means of maintaining the installed R-value of the loose fill insulation.

#### N1102.2.4 Mass walls. Mass walls, for the purposes of this chapter, shall be considered above-grade walls of concrete block, concrete, insulated concrete form (ICF), masonry cavity, brick (other than brick veneer), earth (adobe, compressed earth block, rammed earth) and solid timber/logs.

#### N1102.2.5 Steel-frame ceilings, walls and floors. Steel frame ceilings, walls and floors shall meet the insulation requirements of Table N1102.2.5 or shall meet the U-factor requirements in Table N1102.1.2. The calculation of the U-factor for a steel-frame envelope assembly shall use a series-parallel path calculation method.

For SI: 1 inch = 25.4 mm.

a. Cavity insulation R-value is listed first, followed by continuous insulation R-value.
b. Insulation exceeding the height of the framing shall cover the framing.

N1102.2.6 Floors. Floor insulation shall be installed to maintain permanent contact with the underside of the subfloor decking.

N1102.2.7 Basement walls. Exterior walls associated with conditioned basements shall be INSulated from the top of the basement wall down to ten (10) feet (3048 mm) below grade or to the basement floor, whichever is less. Walls associated with unconditioned basements shall meet this requirement unless the floor overhead is insulated in accordance with Sections N1102.1 and N1102.2.5.

N1102.2.8 Slab-on-grade floors. Slab-on-grade floors with a floor surface less than twelve (12) inches below grade shall be insulated in accordance with Table N1102.1. The insulation shall extend downward from the top of the slab on the outside or inside of the foundation wall. Insulation located below grade shall be extended the distance provided in Table N1102.1 by any combination of vertical insulation, insulation extending under the slab or insulation extending out from the building. Insulation extending away from the building shall be protected by pavement or by a minimum of ten (10) inches (254 mm) of soil. The top edge of the insulation installed between the exterior wall and the edge of the interior slab shall be permitted to be cut at a 45-degree (0.79 rad) angle away from the exterior wall.

N1102.2.9 Crawl space walls. As an alternative to insulating floors over crawl spaces, crawl space walls shall be permitted to be insulated when the crawl space is not vented to the outside. Crawl space wall insulation shall be permanently fastened to the wall and extend downward from the floor to the finished grade level and then vertically and/or horizontally for at least an additional twenty-four (24) inches (610 mm). Exposed earth in unvented crawl space foundations shall be covered with a continuous 0.1 perms or less vapor retarder. All joints of the vapor retarder shall overlap by six (6) inches (153 mm) and be sealed or taped. The edges of the vapor retarder shall extend at least six (6) inches (153 mm) up the stem wall and shall be attached to the stem wall.

N1102.2.10 Masonry veneer. Insulation shall not be required on the horizontal portion of the foundation that supports a masonry veneer.

N1102.2.11 Thermally isolated sunroom insulation. The minimum ceiling insulation R-values shall be R-19 in zone 4 and R-24 in zone 5. The minimum wall R-value shall be R-13 in all zones. New wall(s) separating the sunroom from conditioned space shall meet the building thermal envelope requirements.

N1102.3 Fenestration.

N1102.3.1 U-factor. An area-weighted average of fenestration products shall be permitted to satisfy the U-factor requirements.

N1102.3.2 Glazed fenestration exemption. Up to fifteen (15) square feet (1.4m²) of glazed fenestration per dwelling unit shall be permitted to be exempt from U-factor in Section N1102.1. This exemption shall not apply to the U-factor alternative approach in Section N1102.1.2 and the Total UA alternative in Section N1102.1.3.
N1102.3.3 Opaque door exemption. One side-hinged opaque door assembly up to twenty-four (24) square feet (2.22 m²) in area is exempted from the U-factor requirement in Section N1102.1. This exemption shall not apply to the U-factor alternative approach in Section N1102.1.2 and the Total UA alternative in Section N1102.1.3.

N1102.3.4 Thermally isolated sunroom U-factor. For zones 4 and 5, the maximum fenestration U-factor shall be 0.50 and the maximum skylight U-factor shall be 0.75. New windows and doors separating the sunroom from conditioned space shall meet the building thermal envelope requirements.

N1102.3.5 Replacement fenestration. Where some or all of an existing fenestration unit is replaced with a new fenestration product, including sash and glazing, the replacement fenestration unit shall meet the applicable requirements for U-factor in Table N1102.1.

N1102.4 Air leakage.

N1102.4.1 Building thermal envelope. The building thermal envelope shall be durably sealed to limit infiltration. The sealing methods between dissimilar materials shall allow for differential expansion and contraction. The following shall be caulked, gasketed, weatherstripped or otherwise sealed with an air barrier material, suitable film or solid material.

1. All joints, seams and penetrations.
2. Site-built windows, doors and skylights.
3. Openings between window and door assemblies and their respective jambs and framing.
5. Dropped ceilings or chases adjacent to the thermal envelope.
7. Walls and ceilings separating the garage from conditioned spaces.
8. Behind tubs and showers on exterior walls.
9. Common walls between dwelling units.
10. Attic access openings.
11. Rim joists junction.
12. Other sources of infiltration.

N1102.4.2 Air sealing and insulation. Building envelope, air tightness and insulation installation shall be demonstrated to comply with one of the following options given by Section N1102.4.2.1 or N1102.4.2.2.

N1102.4.2.1 Testing option. Tested air leakage is less than 7 air changes per hour (ACH) when tested with a blower door at a pressure of 0.007 psi (50 pascals). Testing shall occur after rough in and after installation of penetrations of the building envelope, including penetrations for utilities, plumbing, electrical, ventilation and combustion appliances. During testing:
1. Exterior windows and doors, fireplace and stove doors shall be closed, but not sealed;
2. Dampers shall be closed, but not sealed, including exhaust, intake, makeup air, back draft, and flue dampers;
3. Interior doors shall be open;
4. Exterior openings for continuous ventilation systems and heat recovery ventilators shall be closed and sealed;
5. Heating and cooling system(s) shall be turned off;
6. HVAC ducts shall not be sealed; and
7. Supply and return registers shall not be sealed.

N1102.4.2.2 Visual inspection option. The items listed in Table N1102.4.2, applicable to the method of construction, are field verified. Where required by local ordinance, an approved party independent from the installer of the insulation, shall inspect the air barrier and insulation.

N1102.4.3 Fireplaces. New wood-burning fireplaces shall have gasketed doors and outdoor combustion air.

N1102.4.4 Fenestration air leakage. Windows, skylights and sliding glass doors shall have an air infiltration rate of no more than 0.3 cubic foot per minute per square foot [1.5(L/s)/m²], and swinging doors no more than 0.5 cubic foot per minute per square foot [2.5(L/s)/m²], when tested according to NFRC 400 or AAMA/WDMA/CSA101/1.S.2/A440 by an accredited, independent laboratory, and listed and labeled by the manufacturer.

Exception: Site-built windows, skylights and doors.

N1102.4.5 Recessed lighting. Recessed luminaries installed in the building thermal envelope shall be sealed to limit air leakage between conditioned and unconditioned spaces. All recessed luminaries shall be IC-rated and labeled as meeting ASTM E 283 when tested at 1.57 psi (75 Pa) pressure differential with no more than 2.0 cfm (0.944 L/s) of air movement from the conditioned space to the ceiling cavity. All recessed luminaries shall be sealed with a gasket or caulk between the housing and the interior of the wall or ceiling covering.

N1102.5 Maximum fenestration U-factor. The area-weighted average maximum fenestration U-factor permitted using trade-offs from Section N1102.1.3 shall be 0.48 in zones 4 and 5 for vertical fenestration and 0.75 in zones 4 and 5 for skylights.

SECTION N1103; SYSTEMS

N1103.1 Controls. At least one thermostat shall be installed for each separate heating and cooling system.

N1103.1.1 Programmable thermostat. Where the primary heating system is a forced air furnace, at least one thermostat per dwelling unit shall be capable of controlling the heating and cooling system on a daily schedule to maintain different temperature set points at different times of the day. This thermostat shall include the capability to set back or temporarily operate the system to maintain zone temperatures down to 55°F (13°C) or up to 85°F (29°C). The thermostat shall initially be programmed with a heating temperature set point no higher than 70°F (21°C) and a cooling temperature set point no lower than 78°F (26°C).

N1103.1.2 Heat pump supplementary heat. Heat pumps having supplementary electric-resistance heat shall have controls...
that, except during defrost, prevent supplemental heat operation when the heat pump compressor can meet the heating load.

N1103.2 Ducts.

N1103.2.1 Insulation. Supply ducts in attics shall be insulated to a minimum of R-8. All other ducts shall be insulated to a minimum of R-6.

Exception: Ducts or portions thereof located completely inside the building thermal envelope.

N1103.2.2 Sealing. Ducts, air handlers, filter boxes and building cavities used as ducts shall be sealed. Joints and seams shall comply with Section M1601.3.1 of this code. Duct tightness shall be verified by either of the following:

1. Post-construction test: Leakage to outdoors shall be less than or equal to eight (8) cfm (3.78 L/s) per one hundred (100) ft² (9.29 m²) of conditioned floor area or a total leakage less than or equal to twelve (12) cfm (5.66 L/s) per one hundred (100) ft² (9.29 m²) of conditioned floor area when tested at a pressure differential of 0.1 inch w.g. (25 Pa) across the entire system, including the manufacturer's air handler end closure. All register boots shall be taped or otherwise sealed during the test.

2. Rough-in test: Total leakage shall be less than or equal to six (6) cfm (2.83 L/s) per one hundred (100) ft² (9.29 m²) of conditioned floor area when tested at a pressure differential of 0.1 inch w.g. (25 Pa) across the roughed in system, including the manufacturer's air handler enclosure. All register boots shall be taped or otherwise sealed during the test.

If the air handler is not installed at the time of the test, total leakage shall be less than or equal to four (4) cfm (1.89 L/s) per one hundred (100) ft² (9.29 m²) of conditioned floor area.

Exception: Duct tightness test is not required if the air handler and all ducts are located within conditioned space.

N1103.2.3 Building cavities. Building framing cavities shall not be used as supply ducts.

N1103.3 Mechanical system piping insulation. Mechanical system piping capable of carrying fluids above 105°F (40°C) or below 55°F (13°C) shall be insulated to a minimum of R-3.

N1103.4 Circulating hot water systems. All circulating service hot water piping shall be insulated to at least R-2. Circulating hot water systems shall include an automatic or readily accessible manual switch that can turn off the hot water circulating pump when the system is not in use.

N1103.5 Mechanical ventilation. Outdoor air intakes and exhausts shall have automatic or gravity dampers that close when the ventilation system is not operating.

N1103.6 Equipment sizing. Heating and cooling equipment shall be sized as specified in Section M1401.3 of this code.

N1103.7 Snow-melt system controls. Snow- and ice-melting systems, supplied through energy service to the building, shall include automatic controls capable of shutting off the system when the pavement temperature is above 50°F (10°C) and no precipitation is falling and an automatic or manual control that will allow shutoff when the outdoor temperature is above 40°F (4°C).

N1103.8 Pools. Pools shall be provided with energy conserving measures in accordance with Sections N1103.8.1 through N1103.8.3.

N1103.8.1 Pool heaters. All pool heaters shall be equipped with a readily accessible on-off switch to allow shutting off the heater without adjusting the thermostat setting. Pool heaters fired by natural gas or LPG shall not have continuously burning pilot lights.

N1103.8.2 Time switches. Time switches that can automatically turn off and on heaters and pumps according to a pre-set schedule shall be installed on swimming pool heaters and pumps.

Exceptions:

1. Where public health standards require 24-hour pump operation.
2. Where pumps are required to operate solar-and-waste-heat-recovery pool heating systems.

N1103.8.3 Pool covers. Heated pools shall be equipped with a vapor retardant pool cover on or at the water surface. Pools heated to more than 90°F (32°C) shall have a pool cover with a minimum insulation value of R-12.

Exception: Pools deriving over sixty (60) percent of the energy for heating from site-recovered energy or solar energy source.

SECTION N1104; LIGHTING SYSTEMS

N1104.1 Lighting equipment. (a) A minimum of fifty (50) percent of the lamps in permanently installed lighting fixtures shall be high-efficacy lamps.
(b) For purposes of this section, high-efficacy lamps mean compact fluorescent lamps, T-8 or smaller diameter linear fluorescent lamps or lamps with a minimum efficacy of:
   i. 60 lumens per watt for lamps over 40 watts.
   ii. 50 lumens per watt for lamps over 15 watts to 40 watts.
   iii. 40 lumens per watt for lamps 15 watts or less.

SECTION N1105; REFERENCED STANDARDS
N1105.1 For purposes of this chapter, the following referenced standards are applicable:
   (a) AAMA/WDMA/CSA 101/I.S.2/A440-08; American Architectural Manufacturers Association, 1827 Walden Office Square, 550, Schaumburg, IL 60173.
   (b) ASTM E 283-04; ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428.
   (c) NFRC 100-2004; National Fenestration Rating Council, Inc., 8484 Georgia Avenue, Suite 320, Silver Spring, MD 20910. The edition of the documents listed in Chapter 6 for which no edition date is shown shall be the edition which was in effect on January 1, 2004.
   (d) NFRC 400-2004; National Fenestration Rating Council, Inc., 8484 Georgia Avenue, Suite 320, Silver Spring, MD 20910.

N1106 PERFORMANCE BASED CALCULATIONS
(2) The purpose of adopting Section N1106 is to provide a performance based alternative in lieu of compliance with the prescriptive requirements of Chapter 11 of the 2005 Indiana Residential Code.
(3) Amend Chapter 4 as follows:
   (i) Amend Section 401.1, delete "residential buildings" and insert "Class 2 structures".
   (ii) In Section 401.2, delete text and insert as follows: Projects may comply with Section 405 Simulated Performance Alternative (performance).
   (iii) Delete Section 401.3 in its entirety without substitution.
   (iv) Add new Section 401.4 Definitions. The following definitions apply only to this section:

   BUILDING THERMAL ENVELOPE. The basement walls, exterior walls, floor, roof, and any other building element that enclose conditioned space. This boundary also includes the boundary between conditioned space and any exempt or unconditioned space.

   CODE OFFICIAL. See BUILDING OFFICIAL.
   (v) Amend Table 402.1.1 as follows:
      (A) In footnote f, delete "in warm-humid locations as defined by Figure 301.1 and Table 301.1".
      (B) Delete footnote j without substitution.
   (vi) Amend Section 402.1.1 to delete "Chapter 3" and insert "Table N1101.2 of the 2005 Indiana Residential Code".
   (vii) Amend Table 402.1.3 footnote c to delete "in warm-humid locations as defined by Figure 301.1 and Table 301.1".
   (viii) Delete Section 402.1.4 in its entirety without substitution.
   (ix) Delete Section 402.2 in its entirety without substitution.
   (x) Delete Section 402.3 in its entirety without substitution.
   (xi) Delete Section 402.4 in its entirety without substitution.
   (xii) Delete Table 402.4.2 in its entirety without substitution.
   (xiii) Delete Section 402.5 in its entirety without substitution.
   (xiv) Delete Section 403.1 in its entirety without substitution.
   (xv) Delete Section 403.2.3 in its entirety without substitution.
   (xvi) Delete Section 403.3 in its entirety without substitution.
   (xvii) Delete Section 403.4 in its entirety without substitution.
   (xviii) Delete Section 403.5 in its entirety without substitution.
   (xix) Delete Section 403.6 in its entirety without substitution.
   (xx) Delete Section 403.7 in its entirety without substitution.
(xxi) Delete Section 403.8 in its entirety without substitution.
(xxii) Delete Section 403.9 in its entirety without substitution.
(xxiii) Delete Section 404 in its entirety without substitution.
(xxiv) Amend Section 405.3 to delete the last sentence before the exception.
(xxv) Amend Section 405.4.3 to delete the first sentence and insert "The following documents shall be furnished to the code official upon request:"
(xxvi) Amend Table 405.5.2(1) as follows:
(A) In footnote b, delete ", R-2 and R-4 residences".
(B) In footnote d, delete "in accordance with Section 5.1 of AHSRAE 119" and insert "as the equivalent amount of open area (assuming unit discharge coefficient) that would let pass the same quantity of air as would pass collectively through the building envelope at a reference pressure of 4 Pa (ft²) (m²)."
(C) In footnote e, in the first sentence, after "code official" insert ", where required by local ordinance".
(D) In footnote f, insert ", or other approved method," after "page 26.24" and after "page 26.19".
(E) Delete footnotes i, j, and k without substitution.
(xxvii) Amend Section 405.6.1 to delete "International" in item 2 and insert "Indiana".
(xxviii) Amend Section 405.6.2 to delete the last two sentences.

675 IAC 14-4.3-140 Section M1201.1; scope

Authority: IC 22-12-2-2; IC 22-13-2-13
Affected: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 140. Change SECTION M1201.1 to read as follows: The provisions of Chapters 1, 2, and 12 through 24 shall regulate the design, installation, and alteration of any part of the permanent heating, ventilating, and air conditioning for a Class 1 structure-townhouse or a Class 2 structure-1 or 2 family dwelling. (b) Delete the title and text of Section E4104.3, item 1, and substitute to read as follows: 1. Equipotential Bonding Grid. The parts specified in Section E4104.1 above shall be connected to an equipotential bonding grid with a solid copper conductor, insulated, covered, or bare, not smaller than 8 AWG or rigid metal conduit of brass or other identified corrosion-resistant metal conduit. Connections shall be made by exothermic welding or by listed pressure connectors or clamps that are labeled as being suitable for the purpose and are of stainless steel, brass, copper, or copper alloy. The equipotential bonding grid shall conform to the contours of the pool and shall extend within concrete or under other conductive paved, or under unpaved walking surfaces for 3 feet (914 mm) horizontally beyond the inside walls of the pool and shall be permitted to be any of the following:
   1.1 Structural Reinforcing Steel. The structural reinforcing within a concrete pool shell or deck. Where deck reinforcing steel is not an integral part of the pool and its reinforcing, the deck reinforcing steel shall be bonded to other parts of the bonding grid at a minimum of four points uniformly spaced around the pool perimeter using a minimum 8 AWG solid copper conductor. Reinforcing steel shall not extend into soil beyond the concrete envelope.
   1.2 Bolted or Welded Metal Pools. The wall of a bolted or welded metal pool.
   1.3 Alternate Means. This system shall be permitted to be constructed as specified in (i) through (iii):
      (i) Materials and Connections. The grid shall be constructed of minimum 8 AWG bare solid copper conductors. Conductors shall be bonded to each other at all points of crossing. Connections shall be made in accordance with item 1 above.
      (ii) Grid Structure. The grid shall be arranged in a perpendicular grid pattern with 12 inches (305 mm) between conductors with tolerance of 4 inches (102 mm).
      (iii) Securing. The grid shall be secured within concrete pool and deck material or under other conductive pool and deck material.

Exception: The equipotential bonding grid shall not be required to be installed under the bottom of or vertically
along the walls of vinyl lined polymer wall, fiberglass composite, or other pools constructed of nonconductive materials. The equipotential bonding grid shall not be required to be installed under pool decks of nonconductive materials. Any metal parts of the pool, including metal structural supports, shall be bonded in accordance with E4104.1. For the purposes of this section, poured concrete, pneumatically applied (sprayed) concrete, and concrete block, with painted or plastered coatings, shall be considered conductive material. Asphalt, flagstone, brick, tile, and concrete pavers are examples of conductive deck paving materials.

Sec. 262. (a) Change the second paragraph of AE101.1 General to read as follows: AE 101.2 Applicability. These provisions shall be applicable only to a manufactured home or mobile home used as a dwelling unit on privately owned (nonrental) lots and shall apply to the following:
1. Construction or alteration of any foundation system that is necessary to provide for the installation of a manufactured home unit.
2. Construction, installation, addition, or alteration of the building service equipment that is necessary for connecting manufactured homes to water, fuel, or power supplies and sewage systems.
3. Alterations or additions to existing manufactured homes. The construction, alteration, and use of accessory buildings and structures and their building service equipment shall comply with the applicable requirements of the Indiana Residential Code (675 IAC 14).

These provisions shall not be applicable to the design and factory construction of manufactured homes nor shall they be deemed to authorize either modifications or additions to manufactured homes.

(b) Change subsection AE102.1 to read as follows: Manufactured homes and their building service equipment to which additions or alterations are made shall comply with all of the applicable requirements of the Indiana Residential Code (675 IAC 14) for new facilities.

(c) Change the title and text of subsection AE102.2 to read as follows: AE102.2 Additions. Additions made to a manufactured home shall conform to the requirements of this code and all other applicable Indiana codes. Additions shall be structurally independent from the manufactured home.

EXCEPTION: Structural independence need not be provided when:

1. structural calculations are provided to the building official confirming that the addition will not adversely affect the structural integrity of the manufactured home, or
2. the manufacturer of the home confirms, in writing, that the home will safely support the structural loads imposed by the proposed addition.

(d) Add subsection AE102.2.1 to read as follows: AE102.2.1 Alterations. Alterations may be made to any manufactured home or to its building service equipment without requiring the existing manufactured home or its building service equipment to comply with all the requirements of these provisions, provided the alteration or additions conform to that required for new construction, and provided further that no hazard to life, health, or safety will be created by such additions or alterations.

(e) Delete subsection AE102.3 without substitution.

(f) Change subsection AE102.4 to read as follows: The use or occupancy of any manufactured home shall not be changed unless evidence is provided to show compliance with the applicable rules of the Fire Prevention and Building Safety Commission for the new use or occupancy and be released for construction when required by the General Administrative Rules (675 IAC 12).

(g) Delete AE102.5 without substitution.

(h) Change subsection AE301.1 to read as follows: Where required by local ordinance, a manufactured home shall not be installed or altered without first obtaining a permit.

(i) Change the title and text of subsection AE301.2 to read as follows: AE301.2 Additions and alterations to a manufactured home. Where required by local ordinance, a permit shall be obtained to alter, remodel, or add accessory buildings or structures to a manufactured home.

(j) Delete subsection AE301.3 without substitution.

(r) Change SECTION AE402 to read as follows: Manufactured homes and their accessory buildings shall be located on the property in accordance with the applicable sections of the Indiana Residential Code (675 IAC 14) and the ordinances of the jurisdiction in which the home is sited.

(s) Change the exception in subsection AE501.1 to read as follows: EXCEPTION: When specifically approved by the building official, foundation and anchoring systems that are constructed in accordance with the methods specified in Section A600 of this code.

(t) Change the text of AE502.1 to read as follows: Foundation systems designed and constructed in accordance with this section shall be considered as a permanent installation. Where the manufacturer's installation instructions and foundation design details for the home are available, the foundation system shall be installed in accordance with those instructions.
(u) Change subsection AE502.5 to read as follows: Provisions shall be made for the control and drainage of surface water away from the manufactured home in accordance with SECTION 401.3 of this code.

(v) Change subsection AE504 to read as follows: Accessory structures shall not be structurally supported by a manufactured home.

EXCEPTION: Structural independence need not be provided when:
   1. structural calculations are provided to the building official confirming that the addition will not adversely affect the structural integrity of the manufactured home, or
   2. the manufacturer of the home confirms, in writing, that the home will safely support the structural loads imposed by the proposed accessory structure.

(w) Change SECTION AE505 to read as follows: The alteration, replacement, or addition to the building service equipment, other than that required for the initial installation of the manufactured home, shall conform to the regulations set forth in this code.

(x) Delete subsection AE506.2 without substitution.

(y) Change subsection AE507 to read as follows: Alterations made to a manufactured home subsequent to its initial installation shall conform to the occupancy, fire safety, and energy conservation requirements set forth in, or referenced by, the applicable rules of the Fire Prevention and Building Safety Commission.

(z) Change AE604.1 to read as follows: Ground Anchors. Ground anchors shall be designed and installed to transfer the anchoring loads to the ground. The ground anchors shall be sized and installed to the full depth and as specified in the manufacturer's installation manual and shall be installed in undisturbed soil.

(aa) Change subsection AE604.3 to read as follows: All anchoring equipment exposed to weathering shall have a resistance to weather deterioration at least equivalent to that provided by a coating of zinc on steel of not less than 0.625 ounces per square foot on each side of the surface coated.

(bb) Add a new SECTION AE701 Manufacturer's Installation Instructions to read as follows: Manufacturer's Installation Instructions. When the manufacturer's installation instructions are available, manufactured homes installed upon owned (nonrental) lots shall be installed per those installation instructions. Sec. 270. Section S4201-Special provisions is added as follows:  
(1) S4201.1 Residential swimming pools are Class 2 structures according to IC 22-12-1-5. Enforcement of this rule is the responsibility of local units of government.  
(2) S4201.2 The provisions of this rule are not intended to restrict the appropriate use of materials, equipment, or methods of design not specifically described in this rule.  
(3) S4201.3 The enforcing official may require submission of evidence or proof that substantiates any claims made regarding the appropriate use of materials, equipment, or methods of design.  
(4) S4201.4 This section shall not authorize a variance from or modification of any rule of the fire prevention and building safety commission except pursuant to variance authority provided for in IC 22-13-2-7 and IC 22-13-2-11.

Sec. 271. Section S4202-Definitions is added as follows:
(1) S4202.1 Definitions; general. For the purpose of this code, the definitions in this section apply throughout this chapter.
(2) S4202.2 Definitions "A"
(A) "Abrasion hazard" means a sharp or rough surface that could cause injury under normal use.
(B) "Accessible" means, when applied to a fixture, connection, appliance, or equipment, having access thereto, but may require the removal of an access panel, door, or similar obstruction. "Readily accessible" means direct access without the necessity of removing any panel, door, or similar obstruction.
(C) "Agitation" means the mechanical or manual movement to dislodge the filter aid and dirt from the filter element.
(D) "Backwash rate" means the rate of application of water through a filter during the backwash cycle expressed in gallons per minute per square foot of effective filter area.
(E) "Backwash pipe" means a type of "filter waste discharge piping" as defined in subdivision (7)(N).
(F) "Backwash cycle" means the time required to backwash the filter system thoroughly.
(G) "Basin" means any vessel constructed of man-made materials and designed to hold water to be used as a swimming pool, spa, or hot tub.
(H) "Bather" means a person using the pool and adjoining deck areas for the purpose of water sports or related activities.
(I) "Body feed" means the continuous addition of controlled amounts of filter aid during the operation of a diatomite type filter to maintain a permeable filter cake. If added as a slurry, this may be referred to as a slurry feed.
(J) "Booster pump system" means a device used to provide hydraulic support for certain types of equipment such as the following:
   (i) Pool cleaning systems.
(ii) Chlorinators.
(iii) Solar systems.
(iv) Therapy jets.
(v) Water features.

(I) "Breakpoint chlorination" means the addition of a sufficient amount of chlorine to water to destroy the combined chlorine present.

(4) §4202.4 Definitions "C"

(A) "Cartridge" means a filter component of either the depth or surface type having fixed dimensions and designed to remove suspended particles from water flowing through the unit.
(B) "Cartridge, depth type" means a filter cartridge with a medium relying on penetration of particulates into the medium for removal and providing adequate holding capacity of such particulates.
(C) "Cartridge, surface type" means a filter cartridge with a medium relying on retention of particles on the surface of the cartridge for removal.
(D) "Chemical feeder" means any device used to feed chemicals such as sanitizers, pH adjusters, algicide, etc. into a pool or spa.
(E) "Chemical feeder output rate" means the weight or volume of active ingredients delivered by a chemical feeder expressed in units of weight of volume and time.
(F) "Chemical feed rate indicator" means a mechanism that will produce reproducible results expressed in units of weight or volume of chemical per unit of time or per unit of volume of water. The mechanism may:
   (i) be a direct reading instrument; or
   (ii) require the use of a reference chart.
(G) "Chemical piping" means piping that conveys concentrated chemical solutions from a feeding apparatus to the circulation piping.
(H) "Circulation system" means an arrangement of mechanical equipment or components, or both, designed to ensure even distribution of heat, chemicals, and filtrated water throughout the pool or spa. The term includes filters, pumps, strainers, disinfectant, or other chemical feed devices, piping, inlets, drains, overflow fittings, and other appurtenances.
(I) "Code official" means the local building official as authorized under IC 36-7-2-9 and local ordinance.
(J) "Corrosion-resistant" means capable of maintaining original surface characteristics under the prolonged influence of the use environment.
(K) "Cove" means the radius between the wall and the floor.

(5) §4202.5 Definitions "D"

(A) "Decks" means those areas surrounding a pool that are specifically constructed or installed for use by bathers.
(B) "Deep areas" means the portions of a pool having water depths in excess of five (5) feet.
(C) "Design head" means the total head requirement of the circulation system at the design rate of flow.
(D) "Design rate of flow (design filter rate)" means the rate of flow in a system that is used for design calculation. (The volume of the pool, spa, or hot tub in gallons divided by the number of minutes in the turnover time.)
(E) "Diatomite filter" means one designed to filter water through a thin layer of filter aid such as diatomaceous earth or volcanic ash. Diatomite filters may be of the pressure or vacuum type.
(F) "Distribution system, lower" means those devices used in the bottom of a sand type filter to:
   (i) collect the water uniformly during the filtering; and
   (ii) distribute the backwash water uniformly during the backwashing.
(G) "Distribution system, upper" means those devices designed to distribute the water entering a sand type filter in a manner such as to prevent movement or migration of the filter media. This system shall also properly collect water during filter backwashing unless other means are provided.
(H) "Diving board" means a recreational mechanism for entering a swimming pool, consisting of a semirigid board that derives its elasticity through the use of a fulcrum mounted below the board.
(I) "Diving equipment, manufactured" means manufactured diving equipment and shall include diving boards, jump boards, and spring boards. Architectural features such as decorative rocks and elevated bond beams are not considered to be manufactured diving equipment.
(6) S4202.6 Definitions "E"
"Effective filtration area" means the total surface area through which the design flow rate will be maintained during filtration.

(7) S4202.7 Definitions "F"
(A) "Face piping" means the piping, with all valves and fittings, that is used to connect the filter system together as a unit.
(B) "Filter" means a device that separates solid particles from water by circulating the water through a porous substance (a filter medium element).
(C) "Filter aid" means a type of finely divided media used to coat a septum type filter, usually diatomaceous earth or volcanic ash. (Note: Alum, as used on the bed of a sand filter, is also referred to as a filter aid. )
(D) "Filter, cartridge" means a filter that uses a porous cartridge as its filter medium.
(E) "Filter cycle" means the operating time between cleaning or backwash cycles.
(F) "Filter, diatomaceous earth" means a filter that uses a thin layer of diatomaceous earth as its filter medium that periodically must be replaced.
(G) "Filter element" means that part of a filter that supports the surface upon which the filter aid is deposited (usually in diatomite filters).
(H) "Filter media" means the finely graded material that entraps suspended particles (sand, anthracite, etc.).
(I) "Filter, permanent medium" means a filter that under normal use will not have to be replaced.
(J) "Filter rate" means the rate of application of water to a filter expressed in gallons per minute per square foot of effective filter area.
(K) "Filter rock" means graded, rounded rock or gravel, or both, not subject to degradation by common pool chemical used to support filter media.
(L) "Filter sand" means a specially graded type of permanent filter media.
(M) "Filter septum" means that part of the filter element in a diatomite type filter upon which a cake of diatomite or other nonpermanent filter aid may be deposited.
(N) "Filter waste discharge piping" means piping that conducts wastewater from a filter to a drainage system. Connection to drainage system is made through an airgap or other approved method.
(O) "Floor" means the interior bottom pool surface and consists of that surface from a horizontal plane up to a maximum of a forty-five (45) degree slope.
(P) "Flow balance valve" means a device to regulate the effluent from the skimmer housing of each of a combination of two (2) or more surface skimmers.
(Q) "Freeboard" means the clear vertical distance in a sand type filter between the top of the filter media and the lowest outlet of the upper distribution system.
(R) "Fresh water" means water having a specific conductivity less than a solution containing six thousand (6,000) parts per million of sodium chloride.
(S) "Friction loss" means the pressure drop expressed in feet of water or psi caused by liquid flowing through the piping and fittings.

(8) S4202.8 Definitions "H"
(A) "Head loss" means the total pressure drop in pounds per square inch (kilo Pascals) or feet (meters) or head between the inlet and the outlet of a component.
(B) "High rate sand filter" means a sand filter designed for flows in excess of five (5) gallons per minute per square foot.
(C) "Hydrojet booster pump system" means a system whereby one (1) or more hydrojets are activated by the use of a pump that is completely independent of the filtration and heating system of a spa.
(D) "Hydrojets" means a fitting that blends air and water creating a high velocity, turbulent stream of air enriched water.

(9) S4202.9 Definitions "I"
(A) "Indirect waste pipe" means a pipe that does not connect directly with the drainage system but conveys liquid wastes by discharging into a plumbing fixture, interceptor, or receptacle that is directly connected to the drainage
system.
(B) "Inlet fitting" means a fitting or fixture through which circulated or hydrojetted water enters a pool, spa, or hot tub.
(C) "Interactive play attraction" means a water attraction, including, but not limited to, splash pads, spray pads, and manufactured devices using sprayed, jetted, or other water sources contacting the users, not incorporating standing or captured water as part of the user activity area, and not utilizing a pool or spa circulation system.

(10) S4202.10 Definitions "J"
"Jump board" means a recreational mechanism that has a coil spring, leaf spring, or comparable device located beneath the board that is activated by the force exerted in jumping on the board.

(11) S4202.11 Definitions "L"
(A) "Ladders' means the following:
   (i) "Deck ladder" means a ladder for deck access from outside the pool.
   (ii) "In-pool ladder" means a ladder located in a pool to provide ingress and egress from the deck.
   (iii) "Limited access ladder" means a ladder with provision for making entry inaccessible when a pool is not in use, that is, swing-up, slide-up, or equivalent.
(B) "Liner" means the membrane that acts as a container for the water, usually categorized as one (1) of the following:
   (i) "Expandable liner" means a liner that is constructed of a material that has the capability of stretching into a greater depth of irregular shape other than the original constructed dimensions.
   (ii) "Hopper liner" means a liner that is used to obtain greater depth by geometrical pattern construction on the liner bottom or floor to fit a predetermined size and shape.
(C) "Listed" means equipment or materials included in a list published by an organization engaged in product evaluation, that maintains periodic inspection of production of listed equipment or materials, and whose listing states either that the equipment or material meets appropriate standards or has been tested and found suitable for use in a specified manner.
(D) "Lower distribution system" (underdrain) means those devices used in the bottom of a permanent medium filter to collect the water during the filtering and to distribute the water during the backwashing.

(12) S4202.12 Definitions "M"
(A) "Main outlet" means the outlet fitting or fittings at or near the deepest portion of a swimming pool, spa, or hot tub through which water passes to the recirculating system. This outlet is often referred to as the "main drain".
(B) "Make-up water" means fresh water used to fill or refill the pool.
(C) "Multiport valve" means a valve for various filter operations, which combines in one (1) unit the function of two (2) or more single direct flow valves.

(13) S4202.13 Definitions "N"
(A) "Net positive suction head (NPSH)" means the head available at the entrance or eye of an impeller to move and accelerate the water entering the eye. This head is the gauge pressure at the suction flange of the pump plus the velocity head.
(B) "Nonswimming area" means any portion of a pool where water depth, offset ledges, or similar irregularities would prevent normal swimming activities.
(C) "NPSH, available" means a function of the system in which the pump operates. The available NPSH at the desired rate of flow.
(D) "NPSH, required" means a function of the pump design that varies among different makes, and a valve that must be supplied by the pump manufacturer.

(14) S4202.14 Definitions "P"
(A) "Perimeter overflow system" means a continuous channel formed into the sidewall entirely around the perimeter of the pool, unless interrupted by steps, into which surface pool water is continuously drawn during normal operation to provide a skimming action.
(B) "Pinching hazard" means any configuration of components that would pinch or entrap the fingers or toes of a bather.
(C) "Pool" includes the following:
(i) "Combination pool" means a pool used for swimming and diving.
(ii) "Vanishing edge pool" means a pool where the top of one (1) or more of the basin wall or walls is submerged with no adjacent deck or decks.
(iii) "Wading pool" means a shallow pool having a maximum depth of twenty-four (24) inches and intended for children's play.
(iv) "Whirlpool". See "Spa".
(v) "Zero-depth entry pool" means a water attraction having a sloped entrance to where the water depth is zero (0) inches at the shallowest point.
(D) "Pool depth" means the distance between the floor of pool and the waterline.
(E) "Pool plumbing" means all chemical, circulation, filter waste discharge piping, deck drainage, and water filling systems.
(F) "Precipitate" means a solid material that:
   (i) is forced out of a solution by some chemical reaction; and
   (ii) may settle out or remain as a haze in suspension (turbidity).
(H) "Precoat" means the initial coating of filter aid on the septum of a diatomaceous earth filter.
(I) "Pump discharge pressure" means the actual gauge reading measured in pounds per square inch taken at the discharge outlet of a pump.
(J) "Puncture hazard" means any surface or protrusion that would puncture a bather's skin under casual contact.

(15) S4202.15 Definitions "R"

(A) "Rapid sand filter" means a filter designed to be used with sand as the filter media.
(B) "Rated pressure" means that pressure that is equal to or less than the designed pressure and appears on the data plate of the equipment.
(C) "Receptor" means an approved plumbing fixture or device of such material, shape, and capacity as to adequately receive the discharge from indirect waste piping, so constructed and located as to be readily cleaned.
(D) "Recessed treads" means a series of vertically spaced cavities in the pool wall creating tread areas for steps.
(E) "Removable" means capable of being disassembled with the use of only a simple tool such as a screwdriver, pliers, or a wrench.
(F) "Return piping" means that part of the piping between the filter and the pool or spa through which passes the filtered water. (This piping frequently is referred to as "effluent piping").
(G) "Rope and float line" (transition rope) means a continuous line not less than one-fourth (1/4) inch in diameter that is supported by buoys and attached to opposite sides of a pool to separate the deep and shallow ends.

(16) S4202.16 Definitions "S"

(A) "Saline water" means water having a specific conductivity in excess of a solution containing six thousand (6,000) parts per million of sodium chloride.
(B) "Separation tank" means a device used to clarify filter rinse or wastewater. It is sometimes called a "reclamation tank".
(C) "Septum" means that part of the filter element consisting of cloth, wire screen, or other porous material on which the filter cake is deposited.
(D) "Shallow areas" means those portions of a pool ranging in water depth from two (2) to five (5) feet.
(E) "Skim filter" means a surface skimmer combined with a vacuum filter.
(F) "Spa" means any spa that incorporates hot water jets, cold water jets, aeration systems, or any combination of the same for hydromassage.
(G) "Spa, permanent" means a spa in which the water-heating and water-circulating equipment is not an integral part of the product. Permanent spas may employ:
   (i) separate components such as an individual filter, pump, heater, and controls; or
   (ii) assembled combinations of various components.
(H) "Spa, portable, residential" means a spa in which all control, water-heating, and water-circulating equipment is an integral part of the product. Portable residential spas may be permanently wired or cord-connected. The spa shall
be movable and aboveground.
(I) "Spray rinse, manual" means a spray system intended to be used manually for the washing of filter aid or accumulated dirt, or both, from a filter surface either in place or after removal from the filter tank. This is usually accomplished by means of a hose and nozzle.
(J) "Static suction lift" means the vertical distance in feet from the center line of the pump impeller to the level of water in the pool.
(K) "Steps" means a tread or series of treads extending down from the deck and terminating at the pool bottom.
(L) "Steps, recessed" means a step or series of steps that are recessed so that all risers are located outside the pool wall.
(M) "Steps, recessed steps, ladders, and recessed treads" means methods of pool ingress and egress that may be used alone or in conjunction with one another.
(N) "Strainer" means a device used to remove hair, lint, leaves, or other coarse material on the suction side of a pump.
(O) "Suction piping" means that portion of the circulation piping located between the pool structure and the inlet side of the pump and usually includes the following:
   (i) Main outlet piping.
   (ii) Skimmer piping.
   (iii) Vacuum piping.
   (iv) Surge tank piping.
(P) "Surface skimmer" means a device designed to continuously remove surface film and water and return it through the filter as part of the recirculation system, usually incorporating a self-adjusting weir, a collection tank, and a means to prevent air lock of the pump. It is sometimes referred to as a "recirculating overflow", a "mechanical", or an "automatic skimmer".
(Q) "Swimming pool" means any artificial basin of water constructed, modified, or improved for wading, swimming, or diving. The term does not include artificial lakes. The term includes the following:
   (i) "Swimming pool, in-ground" means any pool whose sides rest in partial or full contact with the earth.
   (ii) "Swimming pool, on-ground" means any pool whose sides rest fully above the surrounding earth.
   (iii) "Swimming pool, residential" means any in-ground pool or on-ground pool capable of a water depth greater than forty-two (42) inches (one thousand sixty-seven (1,067) mm), and all pools installed inside a residence, regardless of water depth, whether or not served by electrical circuits of any nature, and which is intended for noncommercial use as a swimming pool by not more than two (2) owner families and their guests.
(17) S4202.17 Definitions "T"
   (A) "Total discharge head" means the value in feet of water that a pump will raise water above its center line.
   (B) "Total dynamic head" or "TDH" means the arithmetical difference between the total discharge head and total suction head (a vacuum reading is considered as a negative pressure). This value is used to develop the published performance curve.
   (C) "Total dynamic suction lift" or "TDSL" means the arithmetical total of static suction lift, friction head loss, and velocity head loss working on the suction side of the pump.
   (D) "Total suction head" means the value in feet of water that a pump will lift by suction.
   (E) "Toxic" means having an adverse physiological effect on man.
   (F) "Trap" means a fitting or device so designed and constructed as to provide, when properly vented, a liquid seal that will prevent the back passage of air without materially affecting the flow of sewage or wastewater through it.
   (G) "Trimmer valve" means a flow adjusting device that is used to proportion flow over the skimming weir and flow through the main suction line from the main outlet or the vacuum cleaning line.
   (H) "Turnover time" means the period of time required to circulate a volume of water equal to the pool capacity.
(18) S4202.18 Definitions "U"
   (A) "Underwater light" means a fixture designed to illuminate a pool from beneath the water surface, further defined as:
      (i) "dry niche light" means a light unit placed behind a watertight window in the pool wall; or
      (ii) "wet niche light" means a watertight and water-cooled light unit placed in a submerged, wet niche in the pool wall and accessible only from the pool.
(B) "Upper distribution system" means those devices designed to distribute the water entering a permanent medium filter in a manner so as to prevent movement or migration of the filter medium. This system shall also properly collect water during filter backwashing unless other means are provided.

(19) S4202.19 Definitions "V"
(A) "Vacuum piping" means the piping from the suction side of a pump connected to a vacuum fitting located at the pool and below the water level to which underwater cleaning equipment may be attached.
(B) "Velocity" means a measurement of the motion of liquids usually expressed in feet per second.
(C) "Vertical" means a truly plumb line of surface running perpendicular to the plane of the horizon.

(20) S4202.20 Definitions "W"
(A) "Wading area" means the portions of a pool having water depths of two (2) feet and less.
(B) "Walls" means interior pool wall surfaces consisting of surfaces from the vertical to a forty-five (45) degree slope.
(C) "Waste piping" means piping that conveys wastewater.
(D) "Waterline" means one (1) of the following:
   (i) The waterline for the skimmer system shall fall in the midpoint of the operating range of the skimmers.
   (ii) The waterline for the overflow system shall be established by the height of the overflow rim or the mid-level of surge weirs, if present.
(E) "Width or length" means the actual water dimension taken from wall to wall at the waterline.
(F) "Winterizing" means the procedure for preparing pools from freezing weather. The term includes chemical treatment of the standing water, plus physical and chemical protection of the pool and its equipment against freezing.
(G) "Working pressure" means the maximum operating water pressure recommended by the manufacturer.

Sec. 272. S4203 Structural design is added as follows:
(1) S4203.1 Prior to construction, rehabilitation, or alteration of a permanently installed residential pool, plans and specifications shall be submitted to the local authority when required by local ordinance for review, approval, and issuance of a permit to construct or rehabilitate.
(2) S4203.2 The structural design and materials used shall be in accordance with generally accepted structural engineering practices. Sand or earth shall not be permitted as an interior finish in a swimming pool.
(3) S4203.3 In all outdoor pools, the pool shell and appurtenances, piping, filter system, pump, motor, and other components shall be so designed and constructed to facilitate protection from damage due to freezing.
(4) S4203.4 The surfaces within the pool intended to provide footing for bathers shall be designed and constructed to provide a slip-resisting surface. The roughness or irregularity of such surfaces shall not provide an abrasion hazard to the feet during normal use.
(5) S4203.5 The colors, patterns, or finishes of the pool interior shall not obscure the existence or presence of objects or surfaces within the pool.

Sec. 273. Section S4204 Materials of construction is added as follows: S4204.1 Swimming pools and all appurtenances thereto shall be constructed of materials that:
(1) are nontoxic to humans and the environment;
(2) are impervious and reasonably enduring;
(3) can withstand the stresses that the pool was designed to receive;
(4) will provide a watertight structure with a smooth and easily cleaned surface without cracks or joints, excluding structural joints; or
(5) a smooth, easily cleaned surface finish shall be applied to, attached to, or installed.

Sec. 275. Section S4206 Walls is added as follows: S4206.1 Walls shall not be greater than eleven (11) degrees from plumb for a minimum depth of two (2) feet nine (9) inches from the waterline in deep areas or two (2) feet three (3) inches in the shallow areas. Below these depths the wall may be curved to join the floor. An exception to this section is walls on Type 1 and special purpose pools shall be plumb as is shown in section 10(d) of this rule, Figure No. 4-5. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-275; filed Mar 25, 2011, 10:19 a.m.: 20110420-IR-675090789FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)

Sec. 276. Section S4207 Floor slope is added as follows: S4207.1 Floor slopes shall be in compliance with the following:
(1) All slopes shall be uniform.
(2) The slope of the floor from the shallow end wall towards the deep end shall not exceed one (1) foot in seven (7) feet (1:7) to the point of the first slope change.
(3) The point of the first slope change shall be:
   (A) defined as the point at which the floor slope exceeds one (1) foot in seven (7) feet (1:7); and
   (B) not less than six (6) feet from the shallow end wall.
(4) The slope of the floor from the point of the first slope change to the deep end wall shall not exceed one (1) foot in three (3) feet (1:3).

Sec. 277. Section S4208 Water depth is added as follows:
(1) S4208.1 Water depths at the shallow end of the swimming area shall be two (2) feet nine (9) inches minimum and three (3) feet six (6) inches maximum, except for special purpose pools.
(2) S4208.2 No minimum water depth shall be specified in a nonswimming area. The nonswimming area shall be visually set apart.
(3) S4208.3 Pools of the type where manufactured diving equipment is permitted shall have the area and depth of water in compliance with the drawings for Type I through Type V pools.
(4) S4208.4 Where manufactured diving equipment is installed, it shall:
   (A) conform to the specifications set forth in section 15 of this rule; and
   (B) be so located in the diving area of the pool so as to provide the minimum dimensions for area and depth of water as shown on drawings of Type I through Type V pools.
(5) S4208.5 The tip of the manufactured diving equipment shall be located at point "A", which is the reference point for all other dimensions.

Longitudinal Cross-section at Centerline

(3) S4210.3 The minimum allowable underwater cross sections at B, C, and D shall be as shown on drawings of Type I through Type V pools (section 4308.4 through 4308.5 of this rule, Figures No. 4-5 through 4-6).

(4) S4210.4 Constant depth and other swimming pools on which diving equipment is prohibited (Type O) with water depths not exceeding four (4) feet shall not be limited in width, length, or depth of water except as provided in sections 4 and 5 of this rule.

(5) S4210.5. Stationary diving platforms built on-site shall be located in the diving area of the pool so as to provide the minimum dimension as shown in Figure No. 4-1, at a maximum height of three (3) feet above the waterline. Point "A" shall be eighteen (18) inches in front of the wall at the platform center line. Stationary diving platforms shall not extend more than eighteen (18) inches horizontally over the water from the wall.

(6) S4210.6 This section contains Figure No. 4-2, a maximum allowable wall slope.

Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 280. Section S4211 Offset ledges and underwater seat benches is added as follows:
(1) S4211.1 Offset ledges, when provided, shall fall within eleven (11) degrees from plumb starting at the junction of the pool wall and waterline and shall have a slip-resisting surface. Maximum width shall be eight (8) inches. The typical allowable dimensions are based on the depths shown as follows:
(2) S4211.2 Underwater seat benches, where provided, shall:
   (A) have a maximum horizontal seat bench depth of twenty (20) inches below the waterline;
   (B) be visually set apart;
   (C) have a slip-resisting surface; and
   (D) be located fully outside of the required minimum diving water envelope if the pool is designed for use with manufactured diving equipment.

Underwater seat benches shall be permitted in the deep end of the pool only if they are either completely recessed, shaped to be compatible with the slope of the pool wall, or in a corner of the pool.

675 IAC 14-4.3-281 Decks and deck equipment

Authority: IC 22-13-2-2
AFFECTED: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 281. Section S4212 Decks and deck equipment is added as follows:
(1) S4212.1 Deck work shall be designed and installed so as to include the quality of subbase, concrete mix design, reinforcing, joints, and finishes. Work performed in accordance with the recommended practices of the American Concrete Institute (ACI) Standard 302.1R-80, "Guide for Concrete Floor and Slab Construction", may be deemed acceptable.
(2) S4212.2 Decks, ramps, coping, and similar step surfaces shall be slip-resisting and easily cleanable.
(3) S4212.3 Special features in or on decks such as markers, brand insignias, or similar features shall conform to this section.
(4) S4212.4 Steps outside the pool perimeter shall be in accordance with 675 IAC 14, the Indiana One and Two Family Dwelling Code.
(5) S4212.5 Excavation areas shall be adequately compacted when they support the deck or decks.
(6) S4212.6 Decks shall be sloped to effectively drain either to perimeter areas or to deck drains. Drainage shall remove pool splash water, deck cleaning water, and rainwater without leaving standing water.
(7) S4212.7 The minimum slope of decks shall be:
   (A) one-eighth (1/8) inch per one (1) foot (1/8:12) for textured, hand-finished concrete decks;
(B) one-fourth (1/4) inch per one (1) foot (1/4:12) for exposed aggregate concrete decks; and
(C) one-half (1/2) inch per one (1) foot (1/2:12) for indoor/outdoor carpeting decks.

(8) S4212.8 The maximum slope for all decks other than wood decks shall be one (1) inch per foot except for ramps. The maximum slope for wood decks shall be one-eighth (1/8) inch per foot except for ramps. Expansion gaps shall be based on good engineering practices with respect to the type of wood used.

(9) S4212.9 The maximum voids between adjoining concrete slabs and/or between concrete slabs and expansion joint material shall be three-sixteenths (3/16) inch of horizontal clearance with a maximum difference in vertical elevation of one-fourth (1/4) inch.

(10) S4212.10 Construction joints where pool coping meets concrete decks shall be watertight and shall not allow water to pass to the ground beneath.

(11) S4212.11 The areas where the decks join pool coping shall be designed and installed so as to protect the coping and its mortar bed from damage as a result of reasonable movement of adjoining decks.

(12) S4212.12 Joints in decks shall be provided to minimize the potential for cracks due to a change in elevations, separation of surfaces, or movement of the slab.

(13) S4212.13 The areas where decks join concrete work shall be protected by expansion joints to protect the pool adequately from the pressures of relative movements.

(14) S4212.14 Decks shall be edged, have a radius, or be otherwise relieved to eliminate sharp corners.

(15) S4212.15 Site drainage shall be provided so as to direct all perimeter deck drainage as well as general site and roof drainage away from the pool.

(16) S4212.16 If used, an open pit or leaching design for backwash sump purposes shall be located so that it falls completely below adjacent decks and fully outside a line projected forty-five (45) degrees downward and away from such decks as shown below.

Sec. 282. Section S4213 Circulation piping is added as follows:
(1) S4213.1 Circulation system piping, other than that integrally included in the manufacture of the pool, shall be subject
to an induced static hydraulic pressure test (sealed system) at twenty-five (25) pounds per square inch for thirty (30) minutes. This test shall be performed before the deck is poured, and the pressure shall be maintained through the deck pour.

(2) S4213.2 Valves installed in or under any decks shall provide a minimum ten (10) inches diameter access cover and valve pit to facilitate servicing.

(3) S4213.3 A hose bibb with a vacuum breaker shall be provided for washing down the entire deck area.

Affect ed: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 283. Section S4214 Pool egress is added as follows:

(1) S4214.1 All pools shall have a means of entry/exit in the shallow end consisting of one (1) ladder, stairs, or recessed treads. Where two (2) or more entries/exits are used, the ladders, stairs, or recessed treads may be used in combination. All treads shall have slip-resisting surfaces.

(2) S4214.2 Where water depths are twenty-four (24) inches or less at the pool wall, the areas shall be considered as providing their own natural mode for entry/exit.

(3) S4214.3 For pools over thirty (30) feet in width, both sides of the deep portions of the pool shall have entries/exits provided.

(4) S4214.4 A means of entry/exit for the shallow end shall be located between the shallow end wall and the cross section at point "D". Where required, entry/exit for the deep end shall be between the deep end wall and the cross section at point "B". (Refer to section 9(b) of this rule, Figure No. 4-1.)

(5) S4214.5 Ladders, stairs, recessed treads, or underwater seat benches shall be provided at the deep end of the pool if the water depth is over five (5) feet.

(6) S4214.6 The design and construction of protruding and recessed pool stairs shall conform to the following:
   (A) Step treads shall have a minimum unobstructed horizontal depth of ten (10) inches and a minimum unobstructed surface area of two hundred forty (240) square inches.
   (B) Risers at the center line of the treads shall have a maximum uniform height of twelve (12) inches with the bottom riser height allowed to vary plus or minus two (2) inches from the uniform riser height.
   (C) The vertical distance between the pool coping edge, deck, or step surface, which shall be slip-resisting, and the uppermost step tread shall be a maximum of twelve (12) inches.

(7) S4214.7 If handrails are used with stairs, they shall conform to the following:
   (A) Handrails, if removable, shall be installed in such a way that they cannot be removed without the use of tools.
   (B) The leading edge of handrails facilitating stairs and pool entry/exit shall be not more than eighteen (18) inches plus or minus three (3) inches horizontally from the vertical plane of the bottom riser, where applicable.
   (C) The outside diameter of handrails shall be between one (1) inch and two (2) inches.

(8) S4214.8 Underwater seats or benches may be provided as part of the stairs or recessed treads.

(9) S4214.9 The design and construction of pool ladders shall conform to the following:
   (A) Pool ladders shall be made entirely of corrosion-resisting materials.
   (B) Ladders shall provide two (2) handholds or two (2) handrails.
   (C) Below the water level, there shall be a clearance of not more than six (6) nor less than three (3) inches between any ladder tread edge measured from the pool wall side of the tread and the pool wall.
   (D) The clear distance between ladder handrails shall be a minimum of seventeen (17) inches and a maximum of twenty-four (24) inches.
   (E) There shall be a uniform height between ladder treads with a seven (7) inch minimum distance and a twelve (12) inch maximum distance.
   (F) Ladder treads shall have a minimum horizontal depth of one and one-half (1 1/2) inches.
   (G) The vertical distance between the top tread and the pool coping or deck shall be a maximum of twelve (12) inches.
(10) S4214.10 The design and construction of recessed treads in the pool wall shall conform to the following:
   (A) Recessed treads at the center line shall have a uniform vertical spacing of twelve (12) inches maximum and seven (7) inches minimum.
   (B) The vertical distance between the pool coping edge, deck, or step surface and the uppermost recessed tread shall be a maximum of twelve (12) inches.
   (C) Recessed treads shall have a minimum depth of five (5) inches and a minimum width of twelve (12) inches.
   (D) Recessed treads shall drain into the pool to prevent accumulation of dirt.
   (E) Each set of recessed treads shall be provided with a pair of handrails/grab rails/handholds to serve all treads and risers.

   Affected:  IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 284. Section S4215 Diving equipment is added as follows:
(1) S4215.1 Supports, platforms, stairs, and ladders for manufactured diving equipment shall be designed to carry the anticipated loads. Stairs and ladders shall be of corrosion-resisting material, easily cleanable, and with slip-resisting tread. All manufactured diving stands higher than twenty-one (21) inches measured from the deck to the top butt end of the board shall be provided with stairs or a ladder, or both. Step treads shall be self-draining.
(2) S4215.2 Platforms and manufactured diving equipment of one (1) meter or higher shall be protected with guard rails, which shall be at least thirty (30) inches above the diving board and extend to the edge of the pool wall.
(3) S4215.3 Manufactured diving equipment shall be:
   (A) designed for swimming pool use; and
   (B) installed in accordance with the manufacturer's recommendations provided with the equipment.
(4) S4215.4 A label shall be permanently affixed to the manufactured diving equipment or jump board and shall include not less than:
   (A) manufacturer's name and address;
   (B) board equipment length;
   (C) identification as to diving or jump board;
   (D) fulcrum setting specifications, if applicable;
   (E) date of manufacture; and
   (F) reference to manufacturer's safety standard, if any, that the board will meet.
(5) 4215.5 Manufactured diving equipment suitable for installation on a lower pool type may be installed on any higher pool type providing no less a water envelope is provided from the tip of the board than called for in the lower type. Manufactured diving equipment of a greater type, for example, Type III, shall not be installed on a pool of lesser type, for example, Type II. In addition, the following provisions apply:
   (A) Manufactured diving equipment shall have slip-resisting tread surfaces.
   (B) Manufactured diving equipment shall be permanently anchored to the pool deck. The edge of the board at the tip end shall be level with the water surface. The tip end of the board over the pool water surface may be higher than the butt end of the board. Refer to manufacturer's recommendations.

   Affected:  IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7
Sec. 285. Section S4216 Swimming pool slides is added as follows:

(1) S4216.1 Swimming pool slides shall meet the requirements of 16 CFR 1207, Safety Standard for Swimming Pool Slides, as published by the U.S. Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, Maryland 20814. Slides, where provided for use with swimming pools, shall have a permanent label or separate certificate indicating conformance with the rules of the Consumer Product Safety Commission issued as 16 CFR 1207.

(2) S4216.2 Swimming pool slides in residential swimming pools shall terminate such that the following applies:
   (A) The end of the slide is not more than twelve (12) inches above the pool deck.
   (B) The depth of the water at the end of the slide meets the manufacturer's recommendations or thirty-six (36) inches, whichever is greater.
   (C) The distance from the end of the slide is not less than twenty (20) feet measured along the axis of travel.
   (D) The depth of water described in clause (B) or a gradually increasing depth shall be maintained for not less than ten (10) feet beyond the end of the slide. This depth of water may gradually decrease beyond that point to a minimum water depth of twenty-four (24) inches. For this requirement a maximum slope of one (1) in seven (7) (1:7) shall be considered "gradual".

(3) S4216.3 Swimming pool slides shall be installed in accordance with the manufacturer's installation instructions and specifications.

(Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-285; filed Mar 25, 2011, 10:19 a.m.: 20110420-IR-675090789FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)

675 IAC 14-4.3-286 Circulation system

Authority: IC 22-13-2-2
Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 286. Section S4217 Circulation system is added as follows:

(1) S4217.1 A circulation system consisting of pumps, piping, return inlets and suction outlets, filters, and other necessary equipment shall be provided for complete circulation of water through all parts of the pool. This circulation system shall be capable of maintaining water clarity and chemistry requirements.

(2) S4217.2 The equipment shall be of adequate size to turn over the entire pool water capacity at least once every twelve (12) hours. Water clarity shall be maintained. When standing at the pool's edge at the deep end, the deepest portion of the pool floor shall be visible.

(3) S4217.3 Circulation system components that require replacement or servicing shall be:
   (A) accessible for inspection, repair, or replacement; and
   (B) installed according to the manufacturer's instructions.

(4) S4217.4 Pool equipment shall be:
   (A) properly supported to prevent damage from misalignment, settlement, etc.; and
   (B) mounted so as to minimize the potential for the accumulation of debris and moisture following manufacturer's instructions.

(5) S4217.5 The water velocity in the pool piping shall not exceed ten (10) feet per second for discharge piping and eight (8) feet per second for suction piping, unless summary calculations are provided to show that the greater flow is possible with the pump and piping provided. In copper pipes, the velocity shall not exceed eight (8) feet per second for suction and discharge piping. Pool piping shall be sized to permit the rated flows for filtering.

(6) S4217.6 The circulation system piping and fittings shall be:
   (A) nontoxic;
   (B) considered to be process piping; and
   (C) of material able to withstand operating pressures and operating conditions.

(7) S4217.7 Equipment shall be designed and fabricated to drain the pool water from the equipment, together with exposed face piping, by removal of drain plugs and manipulating valves, or by other methods. Refer to manufacturer's recommendations for specific information on draining the system.

(8) S4217.8 A pressure or vacuum gauge or other means of indicating system condition shall be provided in the circulation system.
system in an easily readable location.
(9) S4217.9 Time clocks may be used to set the operating period of the circulation system. When time clocks are used, they shall also govern the operating time of appurtenant devices such as chemical/disinfectant feeders, slurry feeders, heaters, etc., that are dependent upon circulation pump flow.
(10) S4217.10 Written operation and maintenance instructions shall be provided for the circulation system.

### 675 IAC 14-4.3-287 Filters

**Authority:** IC 22-13-2-2

**Affected:** IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 287. Section S4218 Filters is added as follows:
(1) S4218.1 Filters shall be designed so that after cleaning per manufacturer's instructions the system can provide the water clarity noted in section S4217.1 of this rule.
(2) S4218.2 Filters shall be designed so that filtration surfaces can be inspected and serviced.
(3) S4218.3 On pressure-type filters, a means shall be provided to permit the release of internal pressure.
(4) S4218.4 Any filter incorporating an automatic internal air release as its principal means of air release shall have lids which provide a slow and safe release of pressure as a part of its design.
(5) S4218.5 Any separation tank used in conjunction with any filter tank shall have a manual means of air release or a lid that provides a slow and safe release of pressure as it is opened as a part of its design.
(6) S4218.6 Pressure filters and separation tanks shall:
   (A) have operation and maintenance instructions permanently installed on the filter or separation tank; and
   (B) include a precautionary statement warning not to start up the system after maintenance without first opening the air release and proper reassembly of the filter and separation tank.

The statement shall be visible and noticeable within the area of the air release.
(7) S4218.7 Piping furnished with the filter shall be of suitable material capable of withstanding one and one-half (1 1/2) times the working pressure. The suction piping shall not collapse when there is a complete shutoff of flow on the suction side of the pump.

### 675 IAC 14-4.3-288 Pumps

**Authority:** IC 22-13-2-2

**Affected:** IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 288. Section S4219 Pumps is added as follows:
(1) S4219.1 A pump and motor shall be provided for circulation of the pool water. Performance of all pumps shall meet or exceed the conditions of flow required for filtering, cleaning, if applicable, and the filters against the total dynamic head developed by the complete system.
(2) S4219.2 With all pressure filter systems a cleanable strainer or screen shall be provided upstream of the circulation pumps to remove solids, debris, hair, lint, etc.
(3) S4219.3 Pumps and motors shall be accessible for inspection and service.
(4) S4219.4 The design and construction of the pumps and component parts shall provide safe operation that is not hazardous to the operator or maintenance personnel.
(5) S4219.5 Where a mechanical pump seal is provided, components of the seal shall be corrosion-resisting and capable of operating under conditions normally encountered in pool operation.
(6) S4219.6 Proper direction of rotation for the pump shall be clearly indicated on the pump.
(7) S4219.7 All motors shall:
(A) have as a minimum an open drip-proof enclosure; and
(B) be constructed electrically and mechanically to perform satisfactorily and safely under the conditions of load and environment normally encountered in swimming pool installations.

(8) S4219.8 Motors shall be capable of operating the pumps under full load with a voltage variation of plus or minus ten percent (10%) from the nameplate rating. If the maximum service factor of the motor is exceeded (at full voltage), the manufacturer shall indicate this on the pump curve.

(9) S4219.9 All motors shall have thermal or current overload protection, either built-in or in the line starter, to provide locked rotor and running protection.

(10) S4219.10 Where the pump is below the waterline, valves shall be installed on permanently connected suction and discharge lines, located in an accessible place outside the walls of the pool, where they shall be readily and easily accessible for maintenance and removal of the pump.

675 IAC 14-4.3-289 Return inlets and suction outlets
Authority: IC 22-13-2-2
Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 289. Section S4220 Return inlets and suction outlets is added as follows:

(1) S4220.1 Return inlets and suction outlets shall be provided and arranged to produce a uniform circulation of water and maintain a uniform disinfectant residual throughout the entire pool. Where skimmers are used, the return inlets shall be located so as to help bring floating particles within range of the skimmers.

(2) S4220.2 The number of return inlets shall be based on a minimum of one (1) return inlet per six hundred (600) square feet of pool surface area, or fraction thereof. Return inlet fittings shall be installed of sufficient pipe size or quantity to allow a full design turnover rate of the circulation system in accordance with the manufacturer's recommendations for return inlets.

(3) S4220.3 Return inlets from the circulation system shall be designed so as not to constitute a hazard to the bather.

(4) S4220.4 The pool shall not be operated if the suction outlet grate is missing, broken, or secured in such a way that it can be removed without the use of tools.

(5) S4220.5 If the suction outlet system, such as a filtration system, booster system, automatic cleaning system, solar system, etc., has a single suction outlet, or multiple suction outlets that can be isolated by valves, each suction outlet shall protect against bather entrapment by:

(A) an antivortex cover;
(B) a twelve (12) inch by twelve (12) inch (12 × 12) grate or larger; or
(C) other means acceptable to the local authority.

(6) S4220.6 Where provided, the vacuum cleaner fittings shall be located in accessible positions at least six (6) inches and not greater than eighteen (18) inches below the minimum operating water level or as an attachment to the skimmers.

(Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-289; filed Mar 25, 2011, 10:19 a.m.: 20110420-IR-675090789FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)

675 IAC 14-4.3-290 Surface skimmer systems
Authority: IC 22-13-2-2
Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 290. Section S4220 Surface skimmer systems is added as follows:

(1) S4220.1 A surface skimming system shall be:

(A) provided on all residential swimming pools; and
(B) designed and constructed to skim the pool surface when the water level is maintained within the operational parameters of the system's rim or weir device.

(2) S4220.2 Skimming devices shall be designed and installed so as not to constitute a hazard to the bather.
675 IAC 14-4.3-291 Electrical requirements
Authority: IC 22-13-2-2
Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 291. Section E4221 Electrical requirements is added as follows:

1) E4221.1 Swimming pool heaters shall be of an "approved" type.
2) E4221.2 Heaters shall be properly sized.
3) E4221.3 The heaters shall be installed according to the manufacturer's recommendations, but not less than the following:
   A) The heater shall be installed on a concrete (or equivalent) base unless it is specifically designed for installation on a combustible surface.
   B) When installing the heater, adequate clearances shall be maintained on all sides and over the top of the unit. Consult manufacturer's instructions for proper clearances.
   C) In order to assure proper combustion, the heater shall have adequate ventilation installed as follows:
      i) When installing a heater indoors, proper openings to the room are required. The heater shall be installed in accordance with 675 IAC 18, the Indiana Mechanical Code, and the manufacturer's recommendations for properly sized air openings to the enclosure.
      ii) All fossil fuel heaters shall be supplied with some type of venting system for either indoor or outdoor installation. These draft or venting devices shall be installed according to the manufacturer's recommendations and shall not be modified.
      iii) When installing a heater that will be using propane gas, special precautions shall be noted. Propane gas is heavier than air and, therefore, can create special problems when the heater is installed in a pit or in an enclosed area. Whenever installing a heater with propane gas, the manufacturer's ventilation recommendations shall be followed.
4) E4221.4 The heater gas supply and pipe sizing shall:
   A) be adequate; and
   B) comply with manufacturer's recommendations.
When installing a gas-fired heater, the gas line shall be run from the gas meter as directly as practical.

5) E4222.5 The heater circulation system shall comply with the manufacturer's recommendations. Precautions shall be taken to avoid siphonage of hot water into the pump or filter. When manufacturers recommend metal pipe, that is, copper, heat sinks, they shall be installed vertically connected to the heater to prevent heat damage to plastic circulation pipe. Heater piping shall be designed to avoid excessive friction losses through the pipe or bypass valves, or both, required. When installing bypass valves, caution shall be taken to ensure adequate flow through the heater at all times.

6) E4222.6 The water piping system shall be installed according to the manufacturer's recommendations. When
manufacturers recommend precautions to eliminate siphonage so that the heater does not destroy the filter or any plastic pipe that is being used. The manufacturer's recommendations shall be followed. NOTE: When installing a heater and a filter system, adequate provisions shall be made so that the heater does not cause excessive pressure drop to the filter system. Refer to manufacturer's requirements or recommendations, or both, for installation of bypass valves. Excessive flow that causes pressure drop can be eliminated by the installation of an external or an automatic bypass valve. When installing a bypass valve, caution shall be noted so that there is always adequate flow through the heater.

(7) E4222.7 A time clock is recommended, and when used it shall be set long enough to properly filter the water and allow enough time for proper heating of the pool. It is recommended that a dual time clock or fireman's switch be used in conjunction with the heater to shut the heater off approximately one-half (1/2) hour before the filter system shuts down.

Sec. 293. Section S4223 Water supply is added as follows:
(1) S4223.1 The water supply serving the pool, which may come from a variety of sources, shall meet 327 IAC, the rules of the water pollution control board, before the bather uses the pool.
(2) S4223.2 No direct mechanical connection shall be made between the potable water supply and the swimming pool, chlorinating equipment, or the system of piping for the pool unless it is protected against backflow and siphonage in a manner approved by 675 IAC 16, the Indiana Plumbing Code, or through an air gap meeting that same code.
(3) S4223.3 An over-the-rim spout, if used, shall be located under a diving board, adjacent to a ladder, or otherwise properly shielded so as not to create a hazard. Its open end shall:
   (A) have no sharp edges; and
   (B) not protrude more than two (2) inches beyond the edge of the pool.

Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 294. Section S4224 Wastewater disposal is added as follows: S4224.1 Backwash water shall be discharged into a sanitary sewer through an approved air gap or into an approved subsurface disposal system or by other means in accordance with 675 IAC 16, the Indiana Plumbing Code, and 327 IAC, the rules of the water pollution control board. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-294; filed Mar 25, 2011, 10:19 a.m.: 20110420-IR-675090789FRA; readopted filed Aug 4, 2011, 8:35 a.m.: 20110831-IR-675110254RFA)

675 IAC 14-4.3-295 Disinfectant; oxidation; chemical feeder equipment
Authority: IC 22-13-2-2
Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 295. Section S4225 Disinfectant; oxidation; chemical feeder equipment is added as follows:
(1) S4225.1 Disinfectant equipment, oxidation equipment, and chemical feeders, hereafter referred to jointly as "equipment", shall be capable of precisely introducing a sufficient quantity of an approved disinfecting agent or other chemical to maintain one (1) milligram per liter of free chlorine residual.
(2) S4225.2 Manufacturer's instructions shall be used in installing chemical feeders. The installation and use of chemical feeders shall conform to the following:
(A) Where using chemical feeders, it is extremely important that they be installed downstream from the filter and heater. An exception is equipment specifically labeled for feeding to the suction side of the pump.

(B) If the chemical feeder is equipped with its own pump, it shall be installed so it introduces the gas or solution downstream from the heater and, if possible, at a position lower than the heater outlet fitting.

(C) Chemical feed pumps shall be wired so they cannot operate unless the filter pump is running. If the chlorinator has an independent timer, the filter and chemical feed pump timers shall be interlocked.

(D) A check valve shall be installed in the piping between the heater and the point of chemical feed.

(3) §4225.3 The installation of ozone generating equipment shall be limited to low ozone output generating equipment. The installation and use of ozone generating equipment shall conform to the following:

(A) Installation of ozone generating equipment shall allow for indications of operation or malfunction to be easily observed. The equipment shall be installed in a manner such that a malfunction will not endanger operators or pool users.

(B) Ozone generating equipment shall be used in conjunction with other chemical treatments to meet the chemical operating parameters in this section. Normal maintenance and monitoring of water chemistry shall be followed.

(C) If the equipment is capable of exposing maintenance or service personnel to ozone concentrations exceeding five hundred (500) parts per million, a self-contained breathing apparatus approved for ozone usage shall be provided. If a distinct, pungent odor is smelled when the ozone generating equipment is operating, the equipment shall be shut down, and the area shall be ventilated. The equipment shall be inspected and repaired as necessary by qualified service personnel.

(D) Manufacturer’s recommendations shall be used to determine where and how ozone shall be injected.

675 IAC 14-4.3-296 Safety features

Authority: IC 22-13-2-2

Affected: IC 22-12-1-5; IC 22-13-2-7; IC 22-13-2-11; IC 22-15; IC 36-7

Sec. 296. Section §4226 Safety features is added as follows:

(1) §4226.1 A residential pool shall be provided with a suitable handhold around its perimeter in areas where depths exceed three (3) feet six (6) inches. Handholds shall be provided no further apart than four (4) feet and shall consist of any one (1) or a combination of items listed as follows:

(A) Coping, ledge, or deck along the immediate top edge of the pool that provides a slip-resisting surface of at least four (4) inches horizontal width and located at or not more than twelve (12) inches above the waterline.

(B) Ladders, stairs, or seat ledges.

(C) A secured rope or railing placed at or not more than twelve (12) inches above the waterline.

(2) §4226.2 Rope anchor devices shall be installed at a minimum of one (1) foot and a maximum of two (2) feet on the shallow end side of a point of change in floor slope. In pools where the slope change occurs in water depths less than four (4) feet six (6) inches, a transition rope supported by buoys shall be installed.

(3) §4226.3 Access to residential pools shall be restricted by one (1) of the following means:

(A) Walls or fencing not less than four (4) feet high and completely surrounding the pool and deck area with the exception of self-closing and latching gates and doors, both capable of being locked.

(B) Other means not less than four (4) feet high and deemed impenetrable by the enforcing authority at the time of construction and completely surrounding the pool and deck area when the pool is not in use.

(C) A combination of clauses (A) and (B) that completely surrounds the pool and deck with the exception of self-closing and latching gates and doors which are capable of being locked. This applies to clauses (A) and (B) and this clause only.

(D) A power safety pool cover that:

(i) shall provide a continuous connection between the cover and the deck, so as to prohibit access to the pool when the cover is completely drawn over the pool;
(ii) shall be mechanically operated such that the cover cannot be drawn open or retracted without the use of a:
  (AA) key; or
  (BB) key and switch; or
  (CC) touch pad with a personal access code;
(iii) is installed with track, rollers, rails, guides, or other accessories necessary to accomplish items (i) and (ii), in accordance with the manufacturer's instructions; and
(iv) shall bear an identification tag indicating that the cover satisfies the requirements of ASTM F 1346–19 (Reapproved 2003), Standards Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas, and Hot Tubs, as published by ASTM International, 100 Barr Harbor Drive, PO Box C700, West Conshohocken, Pennsylvania 19428-2959 for power safety pool covers.

(4) S4226.4 Not less than the following lifesaving equipment shall be installed with each residential swimming pool:
   (A) A ring or throwing buoy fitted with forty (40) feet of one-fourth (1/4) inch diameter line.
   (B) A pole not less than twelve (12) feet in length.
   (C) Access to a telephone.
