Sec. 7. (a) The purpose of this section is to prescribe precision and accuracy standards to be used by a land surveyor in conducting original and retracement surveys and route surveys.

(b) The land surveyor shall select the appropriate equipment and methods and use trained personnel to assure that the acceptable relative positional accuracy specified in this section is not exceeded.

(c) The degree of precision and accuracy necessary for a survey shall be based upon the intended use of the real estate. If the client does not provide information regarding the intended use, the classification of the survey shall be based on the current use of the real estate.

(d) Classifications of surveys are as follows:

(1) Urban surveys. Urban surveys are performed on land lying within or contiguous with a city or town, except for single family residential lots. Urban surveys also include:

- (A) commercial and industrial properties;
- (B) condominiums;
- (C) townhouses;
- (D) apartments; and
- (E) other multiunit developments;

regardless of geographic location.

(2) Suburban surveys. Suburban surveys are performed on residential subdivisions lots. Surveys of single family residential lots shall be suburban surveys even if the lot is located in an urban or a rural area.

(3) Rural surveys. Rural surveys are performed on real estate lying in rural areas that does not otherwise meet the definition of an urban or suburban survey.

(e) The acceptable relative positional accuracies for each classification of survey are as follows:

- (1) Urban surveys: 0.07 feet (21 millimeters) plus 50 parts per million.
- (2) Suburban surveys: 0.13 feet (40 millimeters) plus 100 parts per million.
- (3) Rural surveys: 0.26 feet (79 millimeters) plus 200 parts per million.

(f) Relative positional accuracy may be tested by:

- (1) comparing the relative location of points in a survey as measured by an independent survey of higher accuracy; or
- (2) the results of a minimally constrained, correctly weighted least square adjustment of the survey.

865 IAC 1-12-12 Publication of retracement and original survey results

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5

Sec. 12. (a) When conducting a retracement survey or an original survey, a registered land surveyor shall do the following:

(1) Furnish the client with a written surveyor's report that, in addition to other pertinent data, identifies the type of survey, explains the theory of location applied in establishing or retracing the lines and corners of the surveyed parcel, and gives the registered land surveyor's professional opinion of the cause and the amount of uncertainty in those lines and corners because of the following:

- (A) Availability and condition of reference monuments.
- (B) Occupation or possession lines.
- (C) Clarity or ambiguity of the record description used and of adjoining descriptions and the relationship of the lines of the subject tract with adjoining lines.
- (D) The relative positional accuracy of the measurements.

(2) Record the plat of survey and the associated surveyor's report in the county recorder's office in the county where the property is located when:

- (A) a new tax parcel will be created based on the survey;
- (B) a survey of:

- (i) an unsubdivided tract; or
 - (ii) a portion of a subdivided lot;

has not been previously recorded;

(C) if, in the registered land surveyor's opinion, a survey of a whole subdivided lot or lots is substantially at variance

with:

- (i) the subdivision plat;
- (ii) previously recorded surveys;
- (iii) monuments; or
- (iv) evidence of possession;

(D) if, in the registered land surveyor's opinion, the:

- (i) monuments;
- (ii) monument witnesses;
- (iii) evidence of possession; or
- (iv) description;

are not consistent with the last recorded survey of the parcel;

(E) it is required by law; or

(F) the plat of survey contains land for a new subdivision plat that will subsequently be recorded. The subsequent subdivision plat must be cross-referenced to the previously recorded survey plat.

(b) Notwithstanding subsection (a)(2)(C), an original, platting surveyor setting monuments in a new subdivision in accordance with section 18 of this rule does not need to prepare or record a plat of survey or surveyor's report unless the survey reveals substantial variance with the:

- (1) subdivision plat;
- (2) existing monuments; or
- (3) evidence of possession.

(c) The recorded plat of survey shall:

(1) show the name of the owner of the property on the recorded plat of survey according to the county tax records at the time the survey was certified; and

(2) be cross-referenced to the latest record plat of survey of the property, if any is found.

(d) The plat of survey and the associated surveyor's report shall be recorded in the case:

(1) an original or retracement survey (not previously recorded) that contains a proposed new subdivision plat, before recording the new subdivision plat; or

(2) retracement or original surveys not described in subdivision (1) within:

(A) three (3) months of the survey certification date; or

(B) three (3) years and three (3) months of the survey certification date in those instances where the client signs an objection, which must contain the following statement:

I, the undersigned, hereby request that the following identified survey, certified to me:

(Indicate one (1) or both of the following:)

(i) Shall not be recorded for a period of three (3) years and three (3) months from the date of certification.

(ii) Shall not contain the name of the undersigned client on the survey recorded.

Signed: _____

Date: _____

Certifying Surveyor:

Certificate Date:

Job Number:

Brief Description:

A copy of the signed statement shall be kept with the land surveyor's file.

(e) Nothing in this rule shall:

(1) require the registered land surveyor to:

- (A) furnish any survey documents to the client; or
- (B) record them;

unless the client has satisfied the terms of the surveying engagement; or

(2) prevent the registered land surveyor from furnishing a pro forma copy of the survey to the client for use until the certified survey is requested provided the survey is clearly marked PRO FORMA SURVEY.

(f) Any drawings or plats prepared by a registered land surveyor, such as:

(1) plot plans;

- (2) deed plots;
- (3) topographic maps;
- (4) site plans; or
- (5) construction plans;

that are not intended to be retracement or original surveys, route surveys, or surveyor location reports, shall contain a note stating "This drawing is not intended to be represented as a retracement or original boundary survey, a route survey, or a Surveyor Location Report." Any drawing or plat showing set monumentation is considered to be an original, retracement, or route survey and as such is subject to the applicable sections of this rule. 865 IAC 1-12-13 Retracement and original survey plats

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5; IC 32-19

Sec. 13. (a) When conducting a retracement or original survey, a registered land surveyor shall furnish the client with the surveyor's report and a copy of the plat of survey of the premises drawn to an appropriate scale in such a manner that the data shown will be clearly legible when the plat is reduced to sheets suitable for recording in the county in which the survey was conducted.

(b) The plat of survey, together with the accompanying surveyor's report, shall show or otherwise contain the following information at a minimum:

- (1) The:
 - (A) client's name;
 - (B) date of the last fieldwork;
 - (C) surveyor's file number; and
 - (D) the:
 - (i) name;
 - (ii) address;
 - (iii) signature; and
 - (iv) registration number;

of the surveyor responsible for the work.

- (2) For retracement surveys:

- (A) the record document description or recording information of the parcel surveyed; and
 - (B) any new, modified, or consolidation description with an explanation in the surveyor's report as to why the new description was prepared, together with a statement regarding the location of the new description relative to the record description.

For original surveys, a metes and bounds description with appropriate controlling calls and calling for and accurately describing controlling physical monuments, marked in accordance with section 18 of this rule, except, however, that a metes and bounds description is not required for individual, platted subdivision lots.

- (3) North arrow, area, and scale, including a graphic scale.
- (4) Angles or bearings. When bearings are shown, their basis shall be indicated.
- (5) All pertinent dimensions. On dimensions other than those measured, sufficient notations shall be used to identify their source, such as the following:
 - (A) Recorded measurement (Rec).
 - (B) Calculated from record values (Calc. Rec.).
- (6) All pertinent monuments, with a notation indicating which were found and which were set, including those required to be set by section 18 of this rule, identified as to:
 - (A) their character;
 - (B) their size;
 - (C) their location including their location relative to the surface of the ground; and
 - (D) whether or not they were held as control on the survey.

Found monuments shall be accompanied by a reference to their origin when it is known. Where there is no available documented origin, it shall be so noted on the plat.

(7) The location of all monuments and physical evidence of possession on or beyond the surveyed premises on which establishment of the corners of the surveyed premises are dependent. This includes monuments on all controlling corners or lines appropriate to the description of the tract being surveyed, but in no case shall the survey show fewer than two (2) monumented corners regardless of the description of the tract. The Indiana state plane coordinate system may be used as the basis for a survey in accordance with IC 32-19; however, such use does not relieve the registered land surveyor of applying proper theory of location.

(8) Any physical evidence of possession appurtenant to either the surveyed premises or the adjoining property that is on, near, or across any exterior boundary of the premises. Show the location of such evidence by the distance to such boundary. Show any setback or easement line on the premises that may have been a factor in the location of a boundary line. Failure to show any such evidence will be taken to indicate that there was none.

(9) Any:

- (A) lakes;
- (B) streams;
- (C) known regulated drains; or
- (D) regulated drain rights-of-way;

on or within seventy-five (75) feet of the surveyed premises. A detailed location, based on applicable statutes and rules, is required when a boundary or easement is determined thereby.

(10) Any evidence of use of the surveyed premises by others.

(11) Adjoining parcels identified by title description or record reference. Contiguity, gaps, and overlaps with adjoining parcels shall be clearly shown and dimensioned. Show only the portion of adjoining tracts relevant to the location of the surveyed tract. Gaps and overlaps interior to the surveyed parcel shall be depicted but must be dimensioned only if the client requests.

(12) Any easements or setback lines affecting the survey that were created by a subdivision plat.

(13) Any other easements or setback lines affecting the survey, as required and when documentation is furnished by the client.

(14) If requested by the client, show zoning ordinance classification references. Any zoning use certifications shall be limited to those facts that can be counted or measured.

(15) The following:

- (A) Sufficient data to clearly indicate the theory of location applied in finalizing the locations of the corners.
- (B) Any data at variance with this theory of location.
- (C) Sufficient data to allow the retracement without difficulty of all pertinent lines and corners shown on the plat.

Detail that cannot be legibly depicted on the survey plat shall be otherwise explained in the surveyor's report.

(16) A certificate stating that the survey was performed wholly or in part (state which part) by or under the direction of the registered land surveyor, and to the best of the registered land surveyor's knowledge and belief was executed according to survey requirements in this rule. This certificate shall bear the:

- (A) signature;
- (B) registration number; and
- (C) seal;

of the registered land surveyor and date of the certificate.

(17) If necessary to define the location, a vicinity map shall be provided.

(c) Notwithstanding the requirements of this rule, except for section 18 of this rule, any new subdivision plat may show only the information required by the applicable subdivision control ordinance or other regulation.

(d) Any new subdivision plat recorded must be cross-referenced to a previously recorded survey, which conforms to this rule, of the tract that contains it.

(e) The certificate for a new subdivision must state that there has been no change from the matters of survey revealed by the cross-referenced survey, or any prior subdivision plats contained therein, on any lines that are common with the new subdivision. A new survey, which conforms to this rule, must be executed and recorded if there have been changes in matters of survey from those revealed by the prior recorded survey or any subdivision plats therein on any lines common with a new subdivision. Sec. 14. When conducting an original survey, a land surveyor shall do the following:

(1) Obtain or prepare the documents establishing the intended position of the lines to be created by the original survey, such as any of the following:

(A) The client's sketch.

(B) Instructions defining the lines.

(C) A tentative subdivision map.

(2) Obtain copies of the laws regulating division of property that govern in the jurisdiction in which the property is located.

(3) Survey that portion of the parent tract required to define the lines of the parcel being created by the original survey. This work must be in accordance with this rule. Any conflicts or gaps between the lines of the retracement survey and the adjoiners' lines that affect newly created tracts must be clearly depicted on the original survey, showing which of the new tracts are affected and to what extent.

(4) Conduct field surveys to determine the location of planimetric or topographic features, if any, that are to control the intended position of the lines being created.

(5) In the case of new subdivisions or original surveys, the registered land surveyor shall inform the client of any conflicts between the following:

(A) The requested position of the lot lines to be created.

(B) The position required by any applicable ordinances or regulations.

These conflicts must be resolved before certifying the survey or, if they are not, the conflicts shall be noted on the face of the plat or in the surveyor's report.

865 IAC 1-12-18 Original and retracement survey monumentation

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5

Sec. 18. (a) When conducting a retracement survey or an original survey, a registered land surveyor shall be responsible to set monuments in accordance with this section.

(b) Except as provided in subsection (h) a monument, as defined in subsections (c) through (g), shall be set at every lot or parcel corner being surveyed, including the interior lots of a subdivision. Corners to be set include the beginning and end of curves and the intersection of lines except where the setting of a monument near another monument would cause confusion. Further, a

monument is not required to be set if there is an existing monument at the corner that is within the limits of the relative positional accuracy for the class of survey being performed.

(c) Monuments set in unpaved or other nonimpervious locations shall be five-eighths ($\frac{5}{8}$) inch diameter or larger iron or steel rods, reinforcement bars, or galvanized pipes weighing a minimum of one (1) pound per foot and being at least twenty-four (24) inches long and set with not less than eighteen (18) inches below grade. Other monuments may be used if they:

- (1) are made of material of similar or greater durability, size, and character; and
- (2) can be found by a device capable of detecting ferrous or magnetic objects.

(d) Where practical, monuments in pavement or other impervious areas shall be set according to the requirements contained in subsection (c). However, when it is not practical to set a monument in accordance with subsection (c), then a two (2) inch or longer, one-fourth ($\frac{1}{4}$) inch or larger diameter, magnetic concrete nail, or similar magnetic monument, shall be set, if possible.

(e) Monuments set under subsection (c) or (d) shall have a substantial plastic or metal tag or cap permanently affixed showing the registered land surveyor's surname and professional license number or board-issued firm/agency identification number.

(f) Where monuments as defined in subsection (c) or (d) cannot be set, the survey points must be:

(1) marked by:

- (A) a drill hole;
- (B) a cut cross;
- (C) a notch; or
- (D) other similar permanent mark; and

(2) referenced to any nearby witness monuments or permanent objects, such as:

- (A) building foundations; or
- (B) concrete head walls.

(g) Monuments required by local ordinances shall be set provided they meet or exceed the requirements in subsections (c) and (d).

(h) Where it is not possible or practical to set a monument at the survey point:

- (1) a monument shall be offset; and
- (2) the location shall be selected so that the monument lies on a:
 - (A) line of the survey; or
 - (B) prolongation of the line.

However, offset monuments are not required at interior lot corners not adjoining a street right-of-way. Offset monuments shall be identified as such on the plat and, if possible, in the field. However, if existing monuments fall within the acceptable relative positional accuracy of the survey, a monument will not be required to be set.

(i) If recovery of the monument would be difficult due to the topography or other features of the land, the monuments shall be witnessed or referenced in such a manner that will facilitate their recovery.

(j) At the time they are set, monuments shall be marked, such as with ribbon, paint, or lath, to facilitate the recovery of the monument by the client.

(k) It shall be the responsibility of the land surveyor certifying the subdivision plat to set all monuments required by this section in a new subdivision.

(l) Monuments shall be set before providing the client with the survey documents required by this rule. However, in the case of new subdivisions where, in the opinion of the surveyor, it is probable the individual lot monuments will be disturbed by construction, only the perimeter of the subdivision, or section thereof, must be monumented before recordation. In this situation, the setting of the individual lot monuments may be delayed until no later than:

- (1) after construction is complete (including buildings); or
- (2) two (2) years after recordation of the subdivision plat or, if the subdivision is platted by sections, after recordation of each section;

whichever occurs first. In new subdivisions, if monuments are to be set before recording, then the placement of monuments shall be shown on the subdivision plat. If monuments are to be set after construction is complete, the surveyor shall record an affidavit, cross-referenced to the recorded plat, showing which monuments were set and which were found, the dates the monuments were set or found, together with a certification that states to the best of the surveyor's knowledge and belief the information contained in the affidavit is true and correct. Nothing in this subsection shall be construed to require the surveyor to wait until construction is completed to place monuments.

(m) A surveyor is not required to replace or restore any monument that the surveyor has set that has been:

- (1) moved;
- (2) disturbed; or
- (3) destroyed;

after its original placement for the current survey.

(n) Identification numbers, other than registered land surveyor's registration numbers, used by a land surveying firm or government agency under subsection (c) or (d) must be assigned and authorized for use by the board. Request for firm or agency numbers must be in writing on forms provided by the board. - (A) The client's approved sketch.
- (B) Instructions defining the lines.

(2) Obtain the following:

(A) Copies of the laws that affect route surveys in the area in which the property is located.

A surveyor location report shall not be used for nonresidential tracts greater than two (2) acres.

(b) A registered land surveyor does not assume responsibility regarding the location or existence of any underground use except that indicated by readily visible surface evidence. (2) two (2) feet for other tracts;

unless otherwise specified and explained on the drawing.

(d) House locations more than one hundred (100) feet from an exterior boundary:

(1) may be estimated; and

(2) need not comply with subsection (c).

(e) Obtaining accurate and complete data on or near the perimeter of larger tracts is beyond the scope of the report. Therefore, on larger tracts:

(1) location data for items more than one hundred (100) feet from the house may be estimated and need not comply with subsection (c); and

865 IAC 1-12-30 Section corner perpetuation

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5; IC 36-2-12

Sec. 30. (a) This section outlines the procedures and requirements for registered land surveyors when perpetuating the location of original public land survey or grant corners. As used in this section, "grant" means a subdivision, parcel, or tract of land that existed, or the parent tract of which existed, prior to the commencement of the United States Public Land Survey adjoining such subdivision, parcel, or tract.

(b) The purported location of an original public land survey or grant corner as referenced by the county surveyor of the county in which the corner exists is prima facie evidence of that corner's location. The registered land surveyor's responsibility with regard to the use of or need for original public land survey corners or grant corners in association with an original or retracement survey is not met by merely contacting the county surveyor.

(c) If the:

(1) location of an original public land survey or grant corner is not monumented and referenced by the county surveyor in accordance with Indiana Code 36-2-12; or

(2) registered land surveyor discovers evidence, or otherwise has reason to believe, that a monument purporting to mark the location of an original public land survey or grant corner is not in the proper location;

and if that corner is necessary for purposes of conducting an original, retracement, or route survey as defined in this rule, the registered land surveyor shall contact the county surveyor and perpetuate that corner's location in accordance with this section if the county surveyor is unable to perpetuate the corner in the time frame required by the registered land surveyor.

(d) A registered land surveyor shall perpetuate the location of an original public land survey or grant corner by gathering evidence that may assist in determining the original location of that corner. This evidence includes, but is not limited to, the

following:

- (1) Copies of:
 - (A) The original public land survey field notes and plat or transcribed copies of same.
 - (B) Deeds and plats that reference the location of the corner.
 - (C) Historic survey records, road, street, highway, and bridge plans, corner records, recorded surveys and other relevant information from the county surveyor, county recorder or other county, state and municipal offices.
 - (D) Current or historic aerial photographs.
 - (E) Records from private surveyors who practice or used to practice in the vicinity of the corner.
- (2) Parol evidence from knowledgeable landowners or others who may have information relating to the corner.
- (3) The field location of:
 - (A) Fences.
 - (B) Walls.
 - (C) Roadways.
 - (D) Survey markers.
 - (E) Tree lines.
 - (F) Other lines of possession.
 - (G) Interrelated or nearby section corners, quarter section corners, quarter-quarter corners, or other aliquot corner of a section, and corners of common report.
- (e) After evaluating and weighing the evidence outlined in subsection (d), the registered land surveyor shall do the following:
 - (1) Apply appropriate theory of location to determine the probable locations of the corner.
 - (2) Excavate or otherwise determine if there is a subsurface monument in those locations unless, in the registered land surveyor's opinion, there is no substantial possibility of:
 - (A) a corner stone; or
 - (B) other historical survey monument;

being found in those locations. Examples of such situations include, but are not limited to, corner locations that fall in concrete highways, in areas where other excavations have previously taken place, such as, for culverts or sewers, or in areas of substantial cut or fill, such as, for interstate highway overpasses or underpasses.

Before excavating, the registered land surveyor shall notify the appropriate jurisdictional agencies.

- (f) If, as a result of the corner investigation:
 - (1) a corner stone;
 - (2) historical survey monument; or
 - (3) other evidence;

is found marking the corner, the registered land surveyor shall remonument and reference the corner if necessary to facilitate its recovery by other surveyors.

(g) If, after excavating or otherwise conducting subsurface investigations of the probable locations outlined in subsection (e), a corner stone, historical survey monument, or other evidence of the corner is not found, the registered land surveyor shall do the following:

- (1) Establish the location of the corner:
 - (A) based on the best available evidence; and
 - (B) in accordance with procedures for lost or obliterated corners outlined in or authorized by the United States Code in 43 U.S.C. 751, 43 U.S.C. 752, and 43 U.S.C. 753, which are hereby incorporated by reference.
- (2) Monument that location.

(h) If the corner was perpetuated for use on an original, retracement, or route survey, the registered land surveyor shall do the following:

- (1) Describe and reference the monument in such a manner that facilitates its recovery by other surveyors.
- (2) Document the following:
 - (A) The chain of history of the corner to the best of his or her knowledge.
 - (B) The evidence found and weighed.
 - (C) The search area or areas.
 - (D) The theory of location applied in re-establishing the corner.
 - (E) Other relevant information regarding the perpetuation of the corner in the surveyor's report or on the plat of survey,

or both.

(3) Provide a copy of the surveyor's report and plat of survey to the county surveyor.
