

Other sources of drinking water, including bottled water are rivers, lakes streams, ponds, reservoirs and springs. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and in some cases radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture storm water runoff and residential uses.
- **Organic chemicals**, including synthetic and volatile organic chemicals which are by-products of industrial processes and petroleum production and can also come from gas stations, urban storm water runoff, and septic systems.
- **Radioactive material** which can be naturally occurring or be the result of oil and gas production and mining activities.

City of Alexandria Drinking Water Quality Report for the Year 2013

The City is pleased to present drinking water quality report for the year 2013, required by IDEM, and the United States Environmental Protection Agency. This report explains where Alexandria's drinking water comes from, the quality of the drinking water and where residents can obtain other government information on drinking water.

PWSID # 5248001

EVERY 1st & 3rd MONDAY AT 6PM
CITY HALL, 125 N. WAYNE ST.
ALEXANDRIA, IN 46001

Alexandria's Water-Works routinely monitors your drinking water according to Federal and State laws. This report shows the results of our monitoring for the period of January 1st to December 31st, 2013.

Alexandria's drinking water comes from ground water wells, approximately 120 feet deep located East of SR 9 and South of Old Mill Creek Road at the water works facility. The Common name of the Aquifer from which the city draws it's drinking water is the Wisconsin Till and Silurian Devonian Aquifer System.
