#### INTRODUCTION AND ACKNOWLEDGEMENTS

Designing and implementing effective traffic safety policies requires data-driven analysis of traffic collisions. To help in the policy-making process, the Indiana University Public Policy Institute (PPI) collaborates with the Indiana Criminal Justice Institute (ICJI) to analyze data from the Automated Reporting Information Exchange System (ARIES) database maintained by the Indiana State Police. Research findings are summarized in a series of annual fact sheets on various aspects of traffic collisions, including impaired driving crashes, children, motorcycles, dangerous driving, occupant protection, nonmotorists, commercial vehicles, and work zones. Portions of the content of those reports and in this County Profile Book are based on guidelines provided by the U.S. National Highway Traffic Safety Administration (NHTSA).

The Indiana Officer's Standard Crash Report, completed by local and state law enforcement officers, contains over 200 data items for each collision reported. These include the date, time, and location of the collision, the types of vehicle(s) involved, a description of the events prior to the collision, conditions at the time of the collision, as well as information on the driver and other passengers, pedestrians, pedalcyclists, and animal-drawn vehicle occupants involved in the collision. These statistics are used to inform the public, as well as state and national policymakers, on matters of road safety and serve as the analytical foundation of traffic safety program planning and design in Indiana.

**Note:** Data discrepancies may exist between the 2020 Indiana traffic safety reports and previous traffic safety publications due to updates to the Indiana State Police ARIES data that have occurred since the original publication dates.

#### **DATA SOURCES AND NOTES**

Indiana State Police. Traffic collision data: Automated Reporting Information Exchange system (ARIES), downloaded on March 29, 2021.

Indiana Bureau of Motor Vehicles. Licensed drivers [data], downloaded May 14, 2021.

National Center for Statistics and Analysis. (2020, June). State alcohol-impaired-driving estimates, Traffic safety facts, 2018 data (DOT HS 812 917). National Highway Traffic Safety Administration (NHTSA).

U.S. Census Bureau. Annual Estimates of the Resident Population by Single-Year of Age and Sex for the United States and States (2019), provided by the Indiana Business Research Center, Indiana University.

This report provides information on Indiana traffic collisions for the state and each county in 2020. State- and county-level information is included for the following:

- One map depicting locations of each collision involving a fatal injury and each collision involving an incapacitating injury. Due to invalid or non-existent latitude and longitude coordinates, not all collisions were mapped.
- Total collisions, motorcycle collisions, speed-related and alcohol-impaired collisions, fatalities, and overall restraint use during a five-year period (2016–20).
- Total collisions, speed-related, alcohol-impaired, and motorcycle collisions by month.
- Total collisions, speed-related, alcohol-impaired, and motorcycle collisions by municipality and unincorporated area.
- Licensed drivers by age group.

- Individuals involved in collisions by person type and injury status.
- Alcohol-impaired drivers by age group.
- Total alcohol-impaired collisions and fatal alcohol-impaired collisions over a five-year period.
- Overall restraint use among vehicle occupants and by fatal injury during a five-year period.
- Restraint use by passenger vehicle type.

#### **Notes for exhibits**

The notes below provide explanations regarding information included in the county-specific tables and maps. All Indiana data is extracted from the Indiana State Police Automated Information Reporting Exchange System (ARIES), as of March 29, 2021. Totals may differ slightly from other 2020 traffic safety publications.

#### **Universal definitions**

- N/A not applicable
- **Fatal collisions** are those with one or more fatalities.
- **Injury collisions** are those with no fatalities and one or more incapacitating, non-incapacitating, or possible injuries.
- **Non-fatal injuries** are defined as the sum of incapacitating, non-incapacitating, and possible injury counts.
- Alcohol-impaired drivers are defined by the National Highway Traffic Safety Administration (NHTSA) as drivers who when tested have a blood alcohol concentration (BAC) of at least 0.08 grams per deciliter (g/dL). Any fatal crash involving a driver at that BAC level is categorized as an alcohol-impaired-driving crash, thus any fatalities that happen in a crash that meets that criterion is deemed an alcohol-impaired fatality (NHTSA, 2020).
- A collision is considered alcohol-impaired when any vehicle driver involved has a BAC test result at or above 0.08 g/dL.
- **Motorcycles** are defined as vehicles reported as motorcycle, moped, Class A and B motor driven cycles, and motorized bicycle riders.
- A collision is identified as **speed-related** if any one of the following conditions is met: unsafe speed or speed too fast for weather conditions is listed as the primary or contributing factor of the collision; or a vehicle driver is issued a speeding citation.
- Restraint use analyses are limited to those occurring in passenger vehicles (defined as
  passenger cars, pickup trucks, sport utility vehicles, and vans). Pedestrians, pedalcyclists, and
  animal-drawn vehicle operators are excluded. Percentages are based on total counts that
  include vehicle occupants identified as restrained, unrestrained, and unknown restraint use.

#### Map—Collisions by injury severity

- Fatal and incapacitating collisions are mapped.
- Some fatal and incapacitating collisions are missing from the map due to invalid or non-existing latitude and longitude coordinates.
- Some points may overlap due to the size of the map and the possibility that some collisions occurred at the same—or close to the same—location.

#### Table—County collisions overview

- Motorcycle collision: see universal definitions.
- Speed-related collision: see universal definitions.

- Alcohol-impaired collision: see universal definitions.
- Restraint use: see universal definitions.

#### Table—Collision by month

- Speed-related collision: see universal definitions.
- Alcohol-impaired collision: see universal definitions.
- Motorcycle collision: see universal definitions.

#### Table—Collision by municipality

- Speed-related collision: see universal definitions.
- Alcohol-impaired collision: see universal definitions.
- Motorcycle collision: see universal definitions.
- A collision is categorized into a municipality if that collision occurred within the incorporated limits of the city identified on the crash report.

#### Table—Driver statistics

• Drivers with unknown age are excluded.

#### Table—Individuals in collisions

• Nonfatal injuries: see universal definitions.

#### Table—Impaired drivers in collisions, by age

- Alcohol-impaired collision: see universal definitions.
- Drivers with unknown age are excluded.

#### Figure—Alcohol-impaired collisions

Alcohol-impaired collision: see universal definitions.

#### Figure—Percentage restrained in collisions

- Restraint use: see universal definitions.
- N/A for restraint use in fatal collisions indicates that data is unavailable.

# Table—Percentage of passenger vehicle drivers and passengers involved in collisions who were not wearing a seat belt, by vehicle type

• Restraint use: see universal definitions.

#### **STATE OVERVIEW**

In 2020 in Indiana, there were 175,821 total collisions reported by law enforcement officers—a dramatic decline of more than 41,000 from 2019 (see The pandemic and traffic safety in 2020 text box). Among

total collisions, 808 were classified as fatal, resulting in 896 fatalities. An additional 38,913 individuals were known to be injured.

In 2020, drivers in the 15- to 20-year-old age group had the highest rates of collision involvement in the state (848 per 10,000 licensed drivers), while drivers ages 65 years or older had the lowest rate (261 per 10,000).

Among 223,064 drivers involved in traffic collisions, 1.6 percent (3,480) were involved in alcohol-impaired collisions. A driver is considered alcohol-impaired when the driver has a blood alcohol concentration (BAC) test result at or above 0.08 grams per deciliter (g/dL). Alcohol-impaired collisions fell from 4,847 in 2016 to a five-year low of 3,820 in 2020.

In 2020, overall known restraint use for vehicle occupants in collisions was 87 percent. Between 2016 and 2019, the rate of restraint use among occupants in collisions had remained fairly consistent at 90 or 91 percent. Of persons killed in traffic collisions, 44 percent were known to be restrained. Among passenger vehicle drivers and passengers involved in collisions, 14 percent of pickup truck and 13 percent of passenger car occupants were unrestrained.

#### The pandemic and traffic safety in 2020

The COVID-19 pandemic affected traffic safety in 2020. Preliminary analyses of traffic safety fatalities by the National Highway Traffic Safety Administration (NHTSA)—using data from the Fatality Analysis Reporting System (FARS)—estimates that while vehicle miles travelled were down nationally in 2020 from 2019, the number of fatalities and the fatality rate per 100 million VMT were higher (NCSA, 2021a). Fatalities among passenger vehicle occupants, motorists, and pedalcyclists are estimated to be up 5%, 9%, and 5%, respectively (NCSA, 2021b). NHTSA's analysis also suggests risky traffic behaviors increased in 2020 (OBSR, 2021). For example, national fatality counts for unrestrained occupants of passenger vehicles are estimated to be up 15% and deaths from occupant ejections up 20%.

The 2020 Indiana traffic safety data and analysis should be considered carefully in light of the potentially anomalous effects of the pandemic. Further analysis may be needed to evaluate whether the challenges in Indiana were similar to those identified nationally, whether those challenges continue, and whether the addition or adjustment of countermeasures is warranted.
