INTRODUCTION

Designing and implementing effective traffic safety policies requires data-driven analysis of traffic collisions and their causes. To help in the policy-making process, the Indiana University Public Policy Institute (PPI) collaborates with the Indiana Criminal Justice Institute (ICJI) to analyze annual crash data. These statistics are used to inform the public, practitioners, as well as state and national policy makers on matters of road safety. They also serve as the analytical foundation of traffic safety program planning and design in Indiana. This report—Indiana County Profiles 2022—is one of two annual traffic safety publications produced by PPI.[1]

COUNTY PROFILES

The analysis is organized in 93 fact sheets, one for Indiana and one for each county. Each fact sheet has 11 exhibits including:

- **Collisions by injury severity, 2022**: Map showing locations of each collision involving fatal and incapacitating injuries.
- **Collisions overview, 2018–22:** Table showing total collisions, motorcycle collisions, speed-related and alcohol-impaired collisions, fatalities, and overall restraint use for the last five years.
- **Total collisions and fatalities, 2018–22**: Figure shows total collisions and fatalities during the last five years.
- **Collisions by month, 2022**: Table showing total, speed-related, alcohol-impaired, and motorcycle collisions by month.
- **Collisions by municipality, 2022**: Table showing total, speed-related, alcohol-impaired, and motorcycle collisions by municipality, unincorporated area, or unknown. The state profile does not include this table.
- **Licensed drivers by age group, 2022**: Table showing licensed drivers, drivers in crashes, and the drivers in crashes per 10,000 licensed drivers.
- **Individuals involved in collisions by injury status, 2022**: Table showing the number of drivers, injured occupants, pedalcyclists, pedestrians, and animal-drawn vehicle operators who sustained fatal and non-fatal injuries in collisions.
- **Alcohol-impaired drivers by age group, 2022**: Table showing the number of drivers and impaired drivers in collisions as well as the percentage of drivers who were impaired.
- **Alcohol-impaired collisions, 2018–22**: Figure showing the number of alcohol-impaired crashes and the number of these crashes that resulted in one or more fatalities.
- **Percent of passenger vehicle occupants in collisions who were properly restrained, 2018–22:** Figure showing the percentage of passenger vehicle drivers and passengers in collisions in passenger vehicle—cars, pickup trucks, sport utility vehicles, and vans—who were properly restrained.
- **Percent of passenger vehicle occupants in collisions who were not properly restrained, by vehicle type, 2022:** Figure showing the percentage of drivers and passengers in collisions in passenger cars, pickup trucks, sport utility vehicles, and vans who were not properly restrained.

---

Data

The principal data used to analyze Indiana traffic collisions comes from the Automated Reporting Information Exchange System (ARIES) database maintained by the Indiana State Police. The data used to create this report was downloaded on January 25, 2023. The ARIES database is populated from the Indiana Officer's Standard Crash Report, a form completed by all local and state law enforcement officers. The more than 200 data items for each collision reported include the date, time, and location of the collision; the types of vehicle(s) involved; a description of the events prior to the collision; conditions at the time of the collision; and the information on drivers, passengers, pedestrians, pedalcyclists, and animal-drawn vehicle occupants involved in the collision. License data from the Indiana Bureau of Motor Vehicles also was used to complete the analysis. This data was downloaded on March 22, 2023. The geographic data for the county road networks come from the 2014 TIGER/Line shapefile from the U.S. Census Bureau. The formal citations for these data sources are provided in DATA SOURCES AND OTHER REFERENCES at the end of the report.

Data discrepancies may exist between the 2022 Indiana traffic safety reports and previous traffic safety reports for two reasons. First, some records in the ARIES database were updated with new or corrected information after data was downloaded for the previous reports. Second, prior to the current study, people coded as drivers, injured [occupants], pedestrians, pedalcyclists, and animal-drawn vehicle operators were included in the analysis. People coded as other were excluded from the analysis. However, an increasing number of people in the ARIES database since 2018 have been classified as other. After an examination of collision narratives in 2021 and 2022 by vehicle type and consultation with ICJI, the research team added people who were coded as other to the analysis, treating them as injured passengers. This change will be most obvious for 2021 and in categories with high proportions of passengers, such as motorcycles and child safety.

Selected definitions

The definitions below address the topics covered in the state and county-specific maps, tables, and figures in each fact sheet.

- **Alcohol-impaired drivers and collisions**: The National Highway Traffic Safety Administration (NHTSA) defines drivers as being alcohol-impaired when they test for a blood alcohol concentration (BAC) of at least 0.08 grams per deciliter (g/dL). Any fatal crash involving a driver at that BAC level is categorized as an alcohol-impaired driving crash, thus any fatality that happens in a crash that meets that criterion is deemed an alcohol-impaired fatality.[2] Similarly, in this analysis, any collision involving at least one alcohol-impaired driver is considered an alcohol-impaired collision. By law, drivers in Indiana who have a BAC of at least 0.08 g/dL should receive—at minimum—a Class C misdemeanor (IC 9-30-5-1). Indiana Code also says drivers with a BAC of at least 0.15 g/dL should receive a Class A misdemeanor (IC 9-30-5-1). If the driver had a passenger under the age of 18 in the vehicle, they could face a Class D felony.

---

[2] NHTSA National Center for Statistics and Analysis,2023a, p. 1.

- **Collision/crash severity**:
  1. Fatal crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which at least one person died within 30 days of the crash.
  2. Injury crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which no one died, but at least one person was reported to have: (1) an incapacitating injury; (2) a non-incapacitating injury; or (3) a possible but not visible injury.
  3. Property damage-only crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which no one involved in the crash suffered any injuries. Indiana statute states the estimated property damage must be $1,000 or more.
- **Fatality**: Any injury that resulted in death within a 30-day period after the crash occurred.
- **Licensed drivers**: The annual count of licensed drivers in a given location (e.g., county, state, nation) or group.
- **Motorcycles**: Vehicles coded as motorcycles, Class A and Class B motor-driven cycles, and motorized bicycles. Motorcycle collisions involve one or more of these vehicles.
- **N/A**: not applicable
- **Non-fatal injuries**: Injuries identified in ARIES as incapacitating, non-incapacitating, possible, refused [treatment], not reported, and unknown.
- **Passenger vehicles:** Vehicles including passenger cars, pickup trucks, sport utility vehicles (SUVs), and vans.
- **Person type:** This analysis includes people in collisions coded as drivers, injured [occupants] (passengers), pedalcyclists, pedestrians, and animal-drawn vehicle operators. People coded as other also are included and treated as injured [occupants].
- **Restraint use:** Occupant use of available vehicle restraints including lap belt, shoulder belt, automatic belt, and proper child restraints when applicable. This analysis is limited to drivers and injured passengers in passenger vehicles—passenger cars, pickup trucks, sport utility vehicles, and vans. Pedestrians, pedalcyclists, and animal-drawn vehicle operators were excluded. Percentages are based on total counts that include vehicle drivers and passengers identified as restrained, unrestrained, and unknown restraint use.
- **Speed-related collisions:** A collision is identified as speed-related if a vehicle driver is issued a speeding citation or if the collision report lists unsafe speed or speed too fast for weather conditions as the primary or contributing factor of the collision.

Notes for exhibits

The notes below provide explanations and caveats regarding the data included in the state and county-specific map, tables, and figures in each fact sheet.

Map—Fatal and incapacitating collisions, 2022
- The numbers in the legend indicate the numbers of fatal and incapacitating collisions shown on the map. Some fatal and incapacitating collisions are missing due to invalid or non-existing latitude and longitude coordinates.
- Some points may overlap due to the size of the map and the possibility that some collisions occurred at the same—or close to the same—location.

INDIANA UNIVERSITY
PUBLIC POLICY INSTITUTE

Table—Collisions overview, 2018–22
- See definitions for speed-related collisions, alcohol-impaired collisions, motorcycles, and restraint use.

Figure—Total collisions and fatalities, 2018–22
- No notes.

Table—Collisions by month, 2022
- See definitions for speed-related collisions, alcohol-impaired collisions, and motorcycles.

Table—Collisions by municipality, 2022
- See definitions for speed-related collisions, alcohol-impaired collisions, and motorcycles.
- A collision is counted for a municipality if the crash report identified that the collision occurred within the incorporated limits of a city or town.

Table—Driver statistics by age, 2022
- Excludes drivers of unknown age, and those younger than 15 years old or older than 109.

Table—Individuals in collisions by injury severity, 2022
- See definition for non-fatal injuries.

Table—Impaired drivers in collisions by age,2022
- See definition for alcohol-impaired.
- Excludes drivers of unknown age, and those younger than 15 years old and older than 109.

Figure—Alcohol-impaired collisions, 2018–22
- See definition for alcohol-impaired.

Figure—Percent of passenger vehicle occupants in collisions who were properly restrained, 2018–22
- See definition for restraint use.
- N/A for restraint use in fatal collisions indicates that no passenger vehicle fatalities were reported for the year.

Table—Percent of passenger vehicle occupants involved in collisions who were not properly restrained, by vehicle type, 2018–22
- See definition for restraint use.

INDIANA UNIVERSITY
PUBLIC POLICY INSTITUTE

INDIANA—2022

In 2022, there were 206,936 collisions reported by law enforcement officers across Indiana—a decline of nearly 2,000 from 2021. Among these collisions, 900 were classified as fatal, resulting in 964 fatalities. An additional 46,526 individuals were reported as injured.

In 2022, drivers in the 15- to 20-year-old age group had the highest rate of collision involvement in the state at 1,123 per 10,000 licensed drivers. Drivers ages 65 years or older had the lowest rate at 372 per 10,000 licensed drivers.

Among the 321,552 drivers involved in traffic collisions for which age was known, 3,359 or 1% were involved in alcohol-impaired collisions. A driver is considered alcohol-impaired when the driver has a blood alcohol concentration (BAC) test result at or above 0.08 grams per deciliter (g/dL). Alcohol-impaired collisions fell from 4,060 in 2018 to a five-year low of 3,351 in 2022.

In 2022, overall known proper restraint use for passenger vehicle occupants in collisions was 76%. Known proper restraint use has declined since 2018. Of people killed in traffic collisions in 2022, 39% of them were known to be properly restrained. Among passenger vehicle occupants involved in collisions, drivers and passengers in vans and sport utility vehicles were reported most often as not being properly restrained, at 22% and 21%, respectively.
