

DEATH IN CUSTODY REPORTING ACT

This report includes 2022 Death in Custody Reporting Act data for Indiana, as collected by the Indiana Criminal Justice Institute for the Bureau of Justice Assistance.

Updated by Rylee Screeton, Research Associate

Edited by Christine Reynolds, Research & Planning Division Director

Guided by a Board of Trustees representing all components of Indiana's criminal and juvenile justice systems, the Indiana Criminal Justice Institute (ICJI) serves as the state's planning agency for criminal justice, juvenile justice, traffic safety, and victim services. The Institute develops long-range strategies for the effective administration of Indiana's criminal and juvenile justice systems and administers federal and state funds to carry out these strategies.

The Indiana Criminal Justice Institute serves as Indiana's Statistical Analysis Center (SAC). The SAC's primary mission is compiling, analyzing, and disseminating data on a variety of criminal justice and public safety-related topics. The information produced by the SAC serves a vital role in effectively managing, planning, and creating policy for Indiana's many public service endeavors.

EXECUTIVE SUMMARY

The Indiana Criminal Justice Institute (ICJI), as mandated by the Death in Custody Reporting Act (DCRA), is responsible for collecting data regarding the number and manner of in custody deaths that occur across the State of Indiana. The 2020 calendar year was the first full year DCRA data was collected by ICJI. Data are reported directly to ICJI via a reporting tool housed on the ICJI's website. Additional data are collected through media alerts and searches. The data are then combined into the federally required report and submitted to the Bureau of Justice Assistance (BJA). The data for the 2022 calendar year shows a total of 168 deaths in custody across the State of Indiana. This is 1 more death than were reported in 2021. In April 2022, COVID-19 related deaths were no longer recorded for DCRA data.

Of these 168 deaths, 64.5% occurred in state prisons, 19.5% resulted from police interactions, 12.4% occurred in jails, and around 3% occurred in some other circumstance. Natural causes/illness accounted for the highest volume of deaths (45.6%), followed by suicide (17%), use of force (10%), accidental deaths (6.5%), homicide (3%), and other (2.4%). Twenty-eight deaths are still pending investigation.¹

The decedents were predominately White (66.3%), followed by Black (23.7%). Pacific Islander, Asian, and more than one race each represented under 1% of decedents. The race was unknown for the remaining roughly 8.3% of decedents. The majority of decedents identified as Non-Hispanic (63.9%), with only 3% identifying as Hispanic. The average number of age groups were well dispersed. The 65+ age group represent the highest number of decedents at 39 decedents. The 25 – 34 age group represents 12% of decedents. When grouped more broadly, the majority of decedents (55%) were under the age of 55. Those ages 18 – 24 represented the fewest number of decedents with 5%.

LaPorte, Henry, Miami, Hendricks, and Marion counties were the top five counties reporting the highest number of deaths. Collectively, these five counties accounted for 59% of all 2022 deaths in custody across the State of Indiana. The report provides a further breakdown of decedents by agency type for the manner of death, location, and demographic data.

Overall, the majority of deaths in custody across the state were White males. The males were predominately incarcerated in state prison facilities, which accounted for 41% of total deaths in custody, with the leading manner of death being natural causes/illness, representing 30% of deaths, followed by suicide with 12%.

¹ Use of force is a death attributed to use of force by a law enforcement or corrections officer. Homicide is defined as an incident between 2 or more incarcerated individuals resulting in a death.

BACKGROUND

In FY 2019, the responsibility of collecting data on deaths in custody as mandated by the Death in Custody Reporting Act (DCRA) was redirected from the Bureau of Justice Statistics (BJS) to State Administering Agencies (SAA) that receive Edward Byrne Memorial Justice Assistance Grant (Byrne JAG) funding. As the SAA that receives Byrne JAG funding for the State of Indiana, the Statistical Analysis Center (SAC) within the Indiana Criminal Justice Institute (ICJI) has been collecting DCRA data since the last quarter of 2019. Once ICJI collects the DCRA data, the data is then reported to the Bureau of Justice Assistance (BJA).

DCRA requires state and federal law enforcement agencies to report certain information regarding the death of any person occurring while in custody. "In Custody" is defined as the death of "any person who is detained, under arrest, in the process of being arrested, is en route to being incarcerated, or is incarcerated at a municipal or county jail, state prison, state-run boot camp prison, boot camp prison that is contracted out by the state, any state or local contract facility, or other local or state correctional facility (including any juvenile facility)." Relevant data that is not directly reported to ICJI by agencies is gathered via media sources. This report reflects data ranging from January 1, 2022, to December 31, 2022, the third full calendar year of DCRA data collected by ICJI.

DATA & **METHODS**

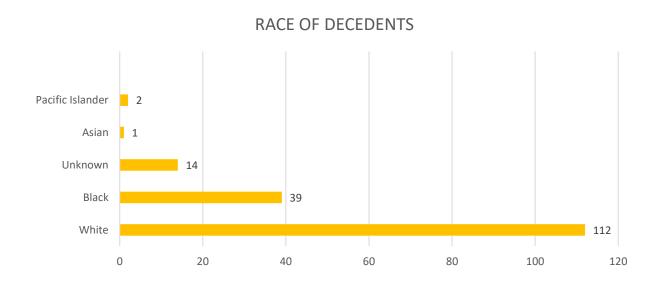

Data for this report is collected in multiple ways from multiple sources. ICJI hosts an online reporting tool for agencies to report their in-custody deaths. Agencies are notified quarterly ahead of each reporting deadline. In addition, ICJI has a partnership with the Indiana Department of Correction (IDOC) to obtain prison data. Prisons report quarterly to IDOC, which then enters those reports into ICJI's portal. Jails and prisons remain the most prevalent and consistent death in custody reporters in Indiana, as police agencies typically have fewer deaths in custody.

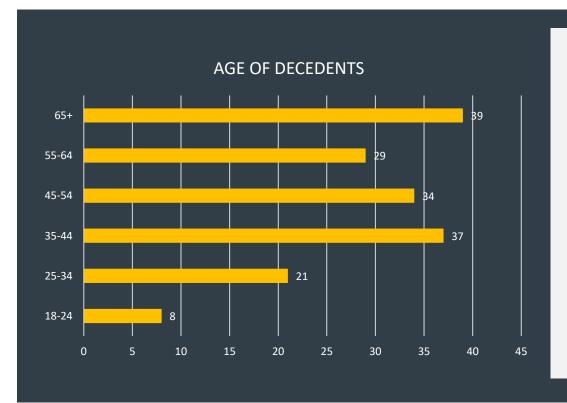

To gather custody-related deaths that are not reported to ICJI via the portal, researchers at the ICJI rely upon media reports, which are primarily gathered using Google Alerts. The ICJI collaborated with other agencies responsible for collecting DCRA data to determine the most comprehensive list of keywords to collect all media mentions of death in custody across the state. All relevant articles are reviewed weekly. If a qualifying death is discovered, the details of the death and demographics of the decedent are verified through multiple sources including obituaries, other media reports, and the Indiana Court Information Technology Extranet (INcite) which is the Indiana Supreme Courts' secured website housing offender and court case data. At the close of each quarter, to ensure all deaths reported in the media have been captured in the dataset, the ICJI also utilizes independent third-party sites such as the Gun Violence Archive and the Washington Post's Police Shooting Database. Despite these efforts, it is possible that not all deaths across the state are captured each quarter.

DATA OVERVIEW

In 2022, ICJI collected reports for 168 deaths in custody. Those 168 deaths represented all chronicled deaths in custody across jails, prisons, and law enforcement interactions.

Male decedents represented 92% of decedents. The remaining 8% were female. Most decedents were White (66%), and 23% were Black. Less than 1% were Pacific Islander, Asian, or More than One Race. The race for 8% of decedents was unknown. Approximately, 3% of decedents were Hispanic, with around 64% identifying as Non-Hispanic. The ethnicity was unknown for the remaining roughly 33%.

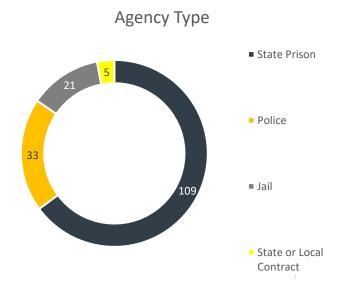

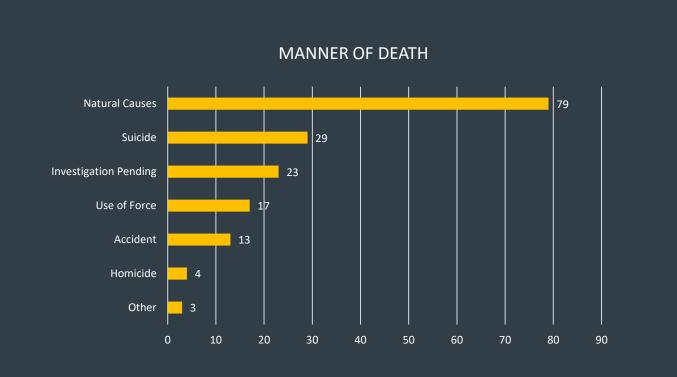

The ages of decedents were well disbursed. The four age groups with the highest number of decedents reported were 65+ (23%), 35 - 44 (22%), 45 - 54 (21%) and 55-64 (17%). The 18-24 age group accounted for the fewest number of deaths, representing 5% of decedents. Most (60%) decedents were under 55, with the remaining 40% being 55 or over.

The majority of deaths occurred in state prisons (64%). Deaths during police interactions accounted for the second-largest number of decedents (20%), followed by jail deaths (13%). Approximately 3% of deaths occurred in other state or local contract facilities.

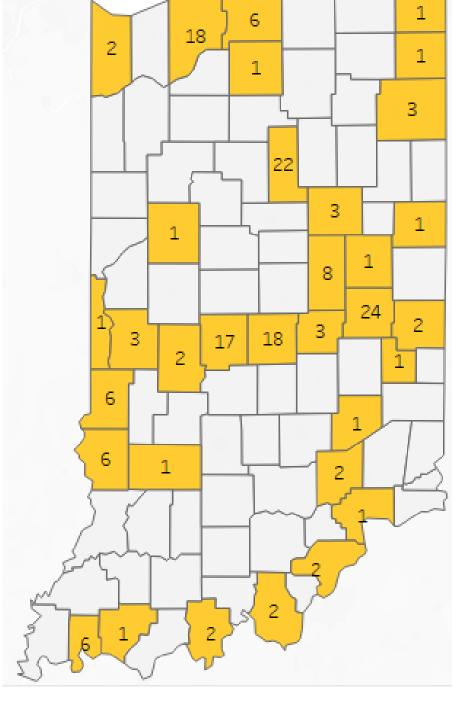

The primary manner of death reported was natural causes/illness, accounting for 47% of deaths. Suicide was the second most common manner of death (17%), followed by use of force (10%), accidental deaths (8%), and deaths caused by homicide (2%). The manner of death for 23 decedents is still pending investigation. Three deaths were ruled as undetermined, which is represented as "other."

In 2022, deaths in custody were recorded in 33 of the 92 counties in Indiana. [2] Henry County and Miami County had the highest number of deaths, with 24 and 22 deaths, respectively. LaPorte and Marion County followed with 18 deaths. Of those 33, 12 counties reported a single death. The table below shows the ten counties with the highest number of in custody deaths. The map below depicts deaths in custody by county.

County	Number of Decedents	Percentage of Total
Henry	24	14%
Miami	22	13%
LaPorte	18	11%
Marion	18	11%
Hendricks	17	10%
Madison	8	5%
St. Joseph	6	4%
Sullivan	6	4%
Vanderburgh	6	4%
Vigo	6	4%

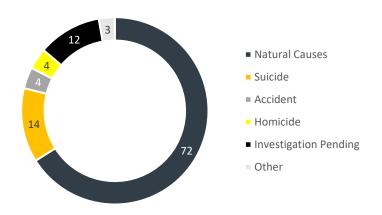

^[2] When reviewing data for the number of decedents per county, it is important to note that counties housing multiple agencies or agency types will likely have a higher number of decedents than those counties housing fewer agencies and agency types (i.e., a county with a County Jail, state prison, and multiple police departments).

STATE PRISON

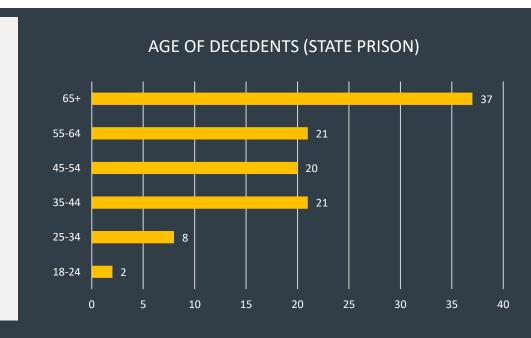

Deaths occurring in the state prisons are reported to the Indiana Department of Correction (IDOC). IDOC then reports those deaths to ICJI. Therefore, the data below is the aggregated data of all state prisons in Indiana that reported deaths to IDOC during any guarter of the 2022 calendar year. Of the 168 deaths reported for 2022, 65%, or 109, of those deaths occurred within a state prison. Nearly 66% of deaths reported within the state prisons were due to natural causes/illness. Roughly 13% of deaths resulted from suicide, 4% were classified as accidental, and 4% were homicides. Twelve prison deaths are still pending investigation in the manner of death and three deaths were reported as other.

MANNER OF DEATH (STATE PRISON)

Males represented 95% of decedents. White individuals accounted for 65% of decedents, Black accounted for 28%, Unknown accounted for 7% and more than one race accounted for roughly 1% each. About 58% were non-Hispanic, with 5 individuals identifying as Hispanic. The ethnicity of 41 decedents was unknown. Roughly half (47%) of decedents were under the age of 55, and the other half (53%) of decedents were 55 or older. A full breakdown of decedents by age can be found below.

Within IDOC Prisons, Henry County accounted for the highest number of incustody deaths with 22%. Miami County had the second-highest number of deaths at 20%, followed by Hendricks County with 15%, LaPorte County with 14%, and Marion County with 8%.

JAIL

Jails across the state reported 21 deaths in custody for the 2022 calendar year. Most (43%) of the reported deaths are still pending investigation. Suicide was the manner of death reported for 29% of decedents. Natural causes/illness accounted for the deaths of 24% of decedents. Accidents were the manner of death for 1 decedent (5%). No homicides were reported in jails in 2022.

Males represent 71% of decedents, with females accounting for the remaining 29%. Most decedents were White (86%). Black,

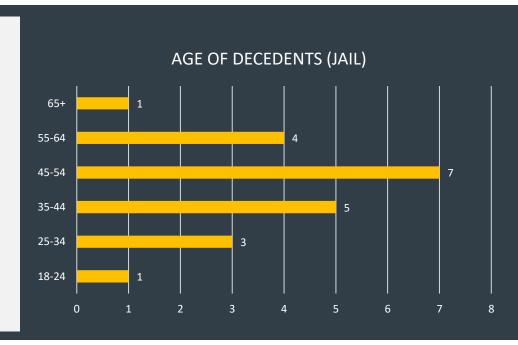

Asian, and Unknown each represented 5% of decedents. Just over 30% of decedents were between the ages of 45 and 54.

To view an in-depth breakdown of the age of decedents, see the table below.

Natural Causes Suicide Accident ■ Investigation Pending

MANNER OF DEATH (JAIL)

Marion County accounted for most jail deaths with 29% of decedents, or 6 individuals. St. Joseph and Vigo County had the second-highest number with 2 deaths. Eleven counties had 1 death each.

POLICE

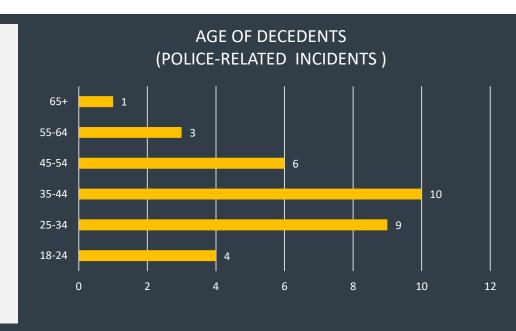

Using reports submitted into the portal and deaths gathered via ICJI's media methodology, 33 decedents were reported for police-related deaths in the 2022 calendar year. Police-related deaths are any deaths that occur during an interaction with police. These interactions include, but are not limited to, deaths that occur during an arrest, while executing a warrant, responding to a disturbance call, and vehicle pursuit. Of those 33 decedents, 52% of the deaths were a result of the use of force by an officer, suicide and accident each represent 24% of police-related deaths.

Ninety-seven percent of the decedents were male, and there was 1 female decedent. The majority of decedents were White (61%), 21% were Black, and one individual was Pacific-Islander. The remaining 5 decedents were Unknown. The ethnicity of 73%

MANNER OF DEATH (POLICE-RELATED INCIDENT) ■ Use of Force Suicide Accident

Non-Hispanic, and the ethnicity of 27% was unknown. Decedents between the ages of 25 and 44 accounted for 58% of deaths. See the table below for a further breakdown of age.

Most police-related deaths occurred in Vanderburgh County (12%), followed by Marion County (9%). Lake, LaPorte, St. Joseph, Allen, Grant, Hancock, and Harrison each accounted for 6%, or two deaths. Steuben, Dekalb, Jay, Delaware, Putnam, Vigo, Greene, Vermillion, Jennings, Clark, Perry, and Warrick all reported one death resulting from police interaction in 2022.

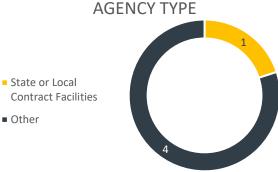

STATE OR LOCAL CONTRACT FACILITIES & **STATE-RUN BOOT CAMPS**

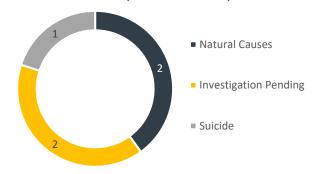

State or local contract facilities reported 1 death for the 2022 calendar year. There were no deaths reported for State Run Boot Camps. Four deaths were reported as occurring in some other form of in-state custody. These three categories account for 5 of the total number of deaths.

Natural causes/illness accounted for 40% of the deaths (2 individuals), while suicide accounted for one death. Two investigations are pending.

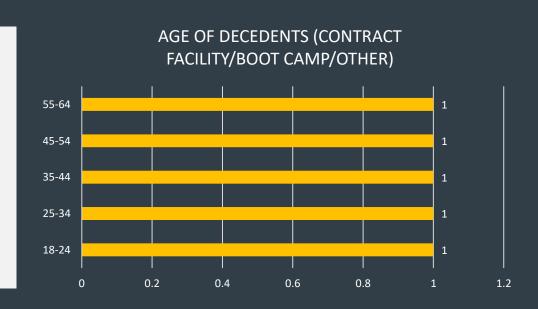

All of the decedents were male. Most were White (67%) and non-Hispanic (83%). One individual was Black, and one individual's ethnicity was unknown. Each age category represented one decedent. See the table below for a further breakdown of decedent age.

MANNER OF DEATH (CONTRACT FACILITY/BOOT CAMP/ OTHER

Allen, St. Joseph, Wayne, Decatur, and Jefferson each reported 1 death occurred at a state or local contract facility, boot camp, or other facility.

CONCLUSION

The ICJI is continuing to refine the collection methods for DCRA data through collaboration with other mandated reporting agencies, by following continually updated guidance from BJA, and by staying up to date with best practices. This report serves as the second annual DCRA report from the ICJI. The ICJI will continue to release DCRA data on an annual basis. In addition to the annual report, the ICJI has created an interactive dashboard of all collected DCRA data, sortable by year, which is hosted on the ICJI website. The dashboard can be found here. This dashboard will be updated quarterly. The ICJI will continue reporting DCRA data to BJA each quarter. BJA produces reports of nationwide DCRA data for each year of data it collects, though these reports are often on a multiple-year delay. The ICJI is expected to remain the most reliable source for "real-time" DCRA data in the State of Indiana.
