directors. BlackRock is a public company (NYSE:BLK). Firm Information Headquartered in New York, the firm maintains offices in 19 countries around the world. BlackRock was founded in 1988 with nearly \$3.7 trillion in assets under management. Investment Philosophy The investment approach for BlackRock's Large Cap Value Portfolio blends a quantitative model with fundamental research. The strategy is based on the belief that incorporating growth/momentum and valuation factors with disciplined security selection and portfolio construction will provide consistent and repeatable investment success. Since its inception, the Teamhas applied an active quantitative approach combined with a fundamental override and strict portfolio construction parameters and risk management controls. Stock Selection The investment process begins with the application of BlackRock's proprietary multi-factor quantitative model to the initial universe of all securities in the Russell 1000 Value Index. Securities outside the benchmark are not purchased. The Team's two dedicated analysts then conduct fundamental research on those securities that are ranked in the top quartile of the model. For each security considered for addition to the portfolio, fundamental research is used to confirm the output of the model. # of holdings 101 % in Top Ten 29% Tumover 50-75% Index A limit of +/-10% for economic sectors versus the Russell 1000 Value. Organization	Vanguard
Product Name	Capital Opportunity
Product Inception Date	August 14, 1995
Ownership Structure	Client-owned Mutual Fund Company
Firm Information	Located in Valley Forge, Pennsylvania; Founded in 1975 with over \$1.8 trillion in assets under management.
Investment Philosophy	Portfolio managers follow a contrarian-growth approach, looking for swiftly growing firms trading at lower valuations. Fundamental analysis and a long-term investment horizon are key components of the advisor's investment strategy.
Stock Selection	Vanguard Capital Opportunity Fund invests primarily in stocks of mid- and small-capitalization companies expected to have above-average earnings growth. Portfolio managers follow a contrarian-growth approach, looking for swiftly growing firms trading at lower valuations. Fundamental analysis and a long-term investment horizon are key components of the advisor's investment strategy. However, stocks may be sold relatively quickly if they are considered overvalued or other securities are more favorably priced. Portfolio is often concentrated by sector and across specific holdings.

Rolling 20 Quarter Domestic Equity Style

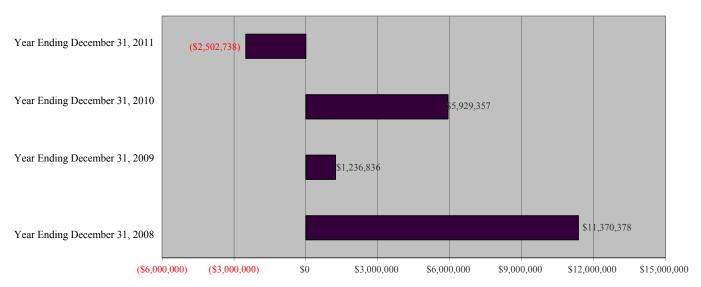

0 : "	T
Organization	Frontegra
Product Name	IronBridge SMID Cap Core Equity
Product Inception Date	March 31, 2004
Ownership Structure	Employees jointly own 70% of IronBridge. The remaining 30% is
Ownership Structure	held by the founder's former partners from HOLT Value
	Associates where they collectively developed the CFROI
	valuation framework. IronBridge was spun out of HOLT Value
	Associates in 1999.
Firm Information	Founded in 1999. Has over \$6.1 billion in assets under
	management. Located in Chicago, Illinois.
Investment Philosophy	IronBridge uses a return on investment analysis that is cash flow
1	based, not accounting based. They believe that superior
	investment returns are achieved by owning companies that
	deliver corporate performance (Cash Flow Return on Investment
	and asset growth) not reflected in today's stock price.
Stock Selection	IronBridge employs a proprietary, multi-factor score to assess the
	attractiveness of firms with a market cap less than \$10 billion.
	They establish where a company is in its Life Cycle, determine
	which variables are critical for analysis, rank the companies, and
	then compile a list of candidates. This first step generally results
	in a potential buy list of 200-300. The team then takes the most
	attractive wealth creators and applies the CFROI valuation model
	in order to understand what drives the valuation and whether
	those factors are currently priced into the prevailing market
	values.

YEAR ENDED DECEMBER 31, 2011

Organization	Fidelity
Don't at Manage	I. D. 101.1
Product Name	Low-Priced Stock December 27, 1989
Product Inception Date	· ·
Ownership Structure	Fidelity Management & Research Company (FMR Co.), the investment advisor to Fidelity's family of mutual funds.
Firm Information	FMR Co. employs a staff of portfolio managers, analysts and traders in the industry, more than 500 in total. Headquartered in Boston.
Investment Philosophy	The Fund strategy is to invest in low priced stocks of less than \$35 per share which generally are small and mid sized companies.
Stock Selection	The portfolio manager focuses on smaller-cap companies with reasonable valuations and solid growth prospects. The fund is spread across hundreds of holdings. The portfolio manager is also willing to devote a substantial chunk of the portfolio to foreign issues and larger-cap stocks and will let cash build if he cannot find enough good investment opportunities.

Organization	Fidelity
Product Name	Diversified International
Product Inception Date	December 27, 1991
Ownership Structure	Fidelity Management & Research Company (FMR
	Co.), the investment advisor to Fidelity's family of mutual funds.
Firm Information	FMR Co. employs a staff of portfolio managers,
	analysts and traders in the industry, more than 500 in total. Headquartered in Boston.
Investment Philosophy	Invests primarily in large cap non-U.S. stocks, but
	will occasionally invest in mid and small cap issues.
	The manager uses a growth-at-a-reasonable price
	strategy to identify securities for the portfolio.
Stock Selection	Generally, the portfolio's sector allocation track the
	MSCI EAFE index, with a modest allocation to
	emerging markets securities. The manager seeks to
	add the most value through security selection. The
	Fund typically holds over 300 issues with a <50%
	turnover.

Organization	Artio Global
Product Name	International Equity II
Product Inception Date	May 4, 2005
Ownership Structure	Artio Global Investors Inc. (Artio Global), formerly known as Julius Baer Americas Inc., is a subsidiary of the Swiss-based Julius Baer Group. Artio Global Investors is publicly traded (NYSE: ART) with 46.1% owned by the public, 27.9% owned
Firm Information	by GAM Holding Ltd. with the rest owned by employees.
Firm Information	Artio Global is headquartered in New York City with offices in Los Angeles and Toronto. Has over \$30.4 billion in assets under management.
Investment Philosophy	Believes a diversified core portfolio, driven by dynamic sector and company fundamental analysis, is the key to delivering consistently superior, risk-adjusted, long-term performance in international equity markets.
Stock Selection	Artio does not conduct initial screenings, but prefers to "think before screen". Their process begins with global fundamental analysis to establish pockets of relative value. Factors are specific to each industry. Utilize bottom-up drivers to evaluate developed markets. Utilize top-down analysis within emerging markets. Apply both bottom-up and top-down to Japan. Typical holding period of securities is 1-3 years.

STATE OF INDIANA INFLATION-INDEXED BOND STYLE: TIPS

YEAR ENDED DECEMBER 31, 2011

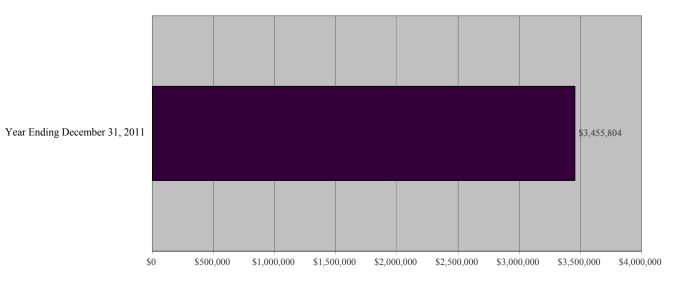

Organization	BlackRock
Product Name	Inflation Protected Bond
Product Inception Date	June 28, 2004
Ownership Structure	BlackRock is independent in ownership and governance, with no single majority stockholder and a majority of independent directors. BlackRock is a public company (NYSE:BLK).
Firm Information	Headquartered in New York, the firm maintains offices in 19 countries around the world. BlackRock was founded in 1988 with nearly \$3.3 trillion in assets under management.
Investment Philosophy	BlackRock blends top-down and bottom-up investment ideas through the utilization of separate investment teams that are responsible for research, analysis, security selection and execution. BlackRock applies the same controlled-duration, relative value sector rotation and security selection strategy to the management of all fixed income, including inflation-linked bonds. BlackRock puts emphasis on risk control.
Security Selection	The investment process centers around two weekly meetings in which lead portfolio managers and research analysts meet to share ideas. The TIPS team utilizes rigorous quantitative analysis and mathematical modeling to understand the valuation of inflation-linked securities and will at times invest limited portions of the portfolio in sectors such as MBS and corporates.
Benchmark Awareness	May invest up to 20% in non-investment grade bonds (high yield or junk bonds) or securities of emerging market issuers. May also invest up to 20% in non-dollar denominated securities of non-U.S. issuers, and may invest without limit in U.S. dollar denominated securities of non-U.S. issuers.

Organization	PIMCO		
Product Name	Total Return Fund		
Product Inception Date	May 11, 1987		
Ownership Structure	Wholly-owned subsidiary of Allianz AG, a Germany-		
	based insurance company.		
Firm Information	Located in Newport Beach, California; Founded in		
	1971; over \$3.7 billion in assets under management.		
Investment Philosophy	PIMCO seeks to add value through the use of top-		
	down strategies, such as exposure to interest rates or		
	duration, yield curve positioning and sector rotation.		
	The firm looks to incorporate bottom-up security		
	selection into their process.		
Security Selection	PIMCO considers the full spectrum of global fixed		
	income sectors when evaluating individual securities		
	for inclusion in its Total Return accounts. Security		
	analysis is conducted primarily by PIMCO's		
	specialists using proprietary models and analytics		
	internally developed and maintained by the firm's		
	financial engineers. The specialists are charged with		
	determining relative value within their sectors.		
Credit Sector Issue Constraints	Max 10% in securities rated B or lower.		
Duration	7.02		
Benchmark Awareness	Will deviate from benchmark significantly in terms of		
	duration, yield curve, and sector allocations.

Floating Bar Return Chart

The Floating Bar chart is used to compare a manager's return against a style group and benchmark's return. A style group is a collection of funds/managers that uses a similar investment strategy for the investment management of their portfolio. It is intended to be a comparison of active managers.

The floating bar represents 80% of the managers included in a particular style group of Callan's universe. The top of the floating bar indicates the 10th percentile of the group and the bottom represents the 90th percentile. The middle dashed line is the median, which has a percent rank of 50. The dashed line just above this is the 25th percentile and the one below is the 75th percentile. The higher up on the floating bar chart the better. The number in parentheses next to each floating bar is the percentile (1 = best performer, 100 = worst performer) the manager and the index ranked for that period. For example, if a fund ranked at the 37th percentile, it means that the fund outperformed 63% of the managers in that particular style group and underperformed 37% of the managers in that group.

Risk vs. Return Scatter Chart

The Risk vs. Return scatter chart is used to show a graphical representation of a manager's risk/return profile within a style group. Returns are on the vertical axis and standard deviation (risk) is on the horizontal axis. The scatter chart is broken down into four quadrants: northeast, northwest, southeast, and southwest. The northwest quadrant (more return/less risk) is the ideal place for a portfolio to reside. The southeast quadrant (less return/more risk) is the worst quadrant. The crosshairs in the chart represent the median (50th Percentile) return and median standard deviation of the particular style group.

Alpha

Alpha measures a portfolio's return in excess of the market return adjusted for risk. It is a measure of the manager's contribution to performance with reference to security selection. A positive alpha indicates that a portfolio was positively rewarded for the residual risk which was taken for that level of market exposure.

Basis Point

1% change = 100 basis points, and 0.01% = 1 basis point.

Coupon Rate

The average coupon is the market value weighted average coupon of all securities in the portfolio. The total coupon payments per year are divided by the total portfolio par value.

Dividend Yield

Dividend Yield is the total amount of dividends paid out for a stock over the preceding twelve months divided by the closing price of a share of the common stock.

Down Market Capture

Down Market Capture represents the ratio of return generated by a manager versus an index when that index is performing negatively.

Downside Risk

Downside Risk stems from the desire to differentiate between "good risk" (upside volatility) and "bad risk" (downside volatility). Whereas standard deviation punishes both upside and downside volatility, downside risk measures only the standard deviation of returns below the target. Returns above the target are assigned a deviation of zero. Both frequency and magnitude of underperformance affect the amount of downside risk.

Effective Maturity

This is a measure of the market-value-weighted-average of the years to expected maturity across all of the securities in the portfolio. Expected years to maturity takes into account any put or call options embedded in the security, any expected sinking-fund paydowns or any expected mortgage principal prepayments.

Effective Yield

The effective yield is the actual total annualized return that would be realized if all securities in the portfolio were held to their expected maturities. Effective yield is calculated as the internal rate of return, using the current market value and all expected future interest and principal cash flows. This measure incorporates sinking fund paydowns, expected mortgage principal prepayments, and the exercise of any "in-the-money" embedded put or call options.

Excess Return Ratio

Excess Return Ratio is a measure of risk adjusted relative return. This ratio captures the amount of active management performance (value added relative to an index) per unit of active management risk (tracking error against the index). It is calculated by dividing the manager's annualized cumulative excess return relative to the index by the standard deviation of the individual quarterly excess returns. The Excess Return Ratio can be interpreted as the manager's active risk/reward tradeoff for diverging from the index when the index is mandated to be the "riskless" market position.

Forecasted Growth in Earnings

This growth rate is a measure of a company's expected long-term success in generating future year-over-year earnings growth. This growth rate is a market value weighted average of the consensus (mean) analysts' long-term earnings growth rate forecast for each company in the portfolio. The definition of long-term varies by analyst but is limited to a 3-8 year range. This value is expressed as the expected average annual growth of earnings in percent.

Information Ratio

The information ratio measures the manager's market risk-adjusted excess return per unit of residual risk relative to a benchmark. It is computed by dividing alpha by the residual risk over a given time period. Assuming all other factors being equal, managers with lower residual risk achieve higher values in the information ratio. Managers with higher information ratios will add value relative to the benchmark more reliably and consistently.

Managers with higher Information Ratios have demonstrated higher risk-adjusted excess returns per unit of residual risk over the time period measured. When plotted on a floating bar chart versus managers of a similar style, the higher the manager ranks (1 = best, 100 = worst) the better.

Option Adjusted Duration

The modified duration of a security, calculated using a model that accounts for embedded options. The OA duration indicates how cash flows change when interest rates change.

Price/Book Value

The Price to Book Value is a measure of value for a company. It is equal to the market value of all the shares of common stock divided by the book value of the company. The book value is the sum of capital surplus, common stock, and retained earnings.

Price/Earnings Ratio

The Price to Earnings Ratio (P/E) is a measure of value for a company. It is equal to the price of a share of common stock divided by the earnings per share for a twelve-month period.

Quality Rating

Quality Rating is typically assigned by a third-party rating agency, such as Standard & Poor's, Moody's or Fitch. Quality ratings measure the relative investment quality of bonds by using symbols which range from the highest investment quality (least investment risk) to the lowest investment quality (greatest investment risk).

Relative Standard Deviation

Relative Standard Deviation is a simple measure of a manger's risk (volatility) relative to a benchmark. It is calculated by dividing the manager's standard deviation of returns by the benchmark's standard deviation of returns. A relative standard deviation of 1.20, for example, means the manager has exhibited 20% more risk than the benchmark over that time period. A ratio of .80 would imply 20% less risk. This ratio is especially useful when analyzing the risk of investment grade fixed-income products where actual historical durations are not available. By using this relative risk measure over rolling time periods one can illustrate the "implied" historical duration patterns of the portfolio versus the benchmark.

Managers with lower Relative Standard Deviations have demonstrated lower volatility relative to their benchmark over the time period measured. When plotted on a floating bar chart versus managers of a similar style, the lower the manager ranks (1 = worst, 100 = best) the better.

Residual Portfolio Risk

Residual Portfolio Risk is the unsystematic risk of a fund, the portion of the total risk unique to the fund (manager) itself and not related to the overall market. This reflects the "bets" which the manager places in that particular asset market. These bets may reflect emphasis in particular sectors, maturities (for bonds), or other issue specific factors which the manager considers a good investment opportunity. Diversification of the portfolio will reduce or eliminate the residual risk of that portfolio.

Sharpe Ratio

Sharpe Ratio is a commonly used measure of risk-adjusted return. It is calculated by subtracting the "risk-free" return (usually 3 Month Treasury Bill) from the portfolio return and dividing the resulting "excess return" by the portfolio's risk level (standard deviation). The result is a measure of return gained per unit of risk taken.

Managers with higher Sharpe Ratios have demonstrated excess return per unit of risk over the time period measured. When plotted on a floating bar chart versus managers of a similar style, the higher the manager ranks (1 = best, 100 = worst) the better.

Standard Deviation

Standard Deviation is a statistical measure of portfolio risk. It reflects the average deviation of the observations from their sample mean. Standard deviation is used as an estimate of risk since it measures how wide the range of returns typically is. The wider the typical range of returns, the higher the standard deviation of returns, and the higher the portfolio risk. If returns are normally distributed (i.e. has a bell shaped curve distribution) then approximately 2/3 of the returns would occur within plus or minus one standard deviation from the sample mean.

Up Market Capture

Up Market Capture represents the ratio of return generated by a manager versus an index when that index is performing positively.

Weighted Average Market Capitalization

Weighted Average Market Capitalization is the average market value of all outstanding common stock of companies included in a portfolio, weighted in proportion to their percentage of net assets in the fund.

Styles

Large Cap Core Equity Index: Large Cap Core Equity Index Style managers hold portfolios with characteristics similar to those of the broader market as represented by the Standard & Poor's 500 Index or the KL Domini Social 400 Index.

Large Cap Core Equity: Large Cap Core managers' portfolio holdings and characteristics are similar to that of the broader market as represented by the Standard & Poor's 500 Index, with the objective of adding value over and above the index, typically from sector or issue selection. The core portfolio exhibits similar risk characteristics to the broad market as measured by low residual risk with Beta and R-Squared values close to 1.00.

Large Cap Value Equity: Large Cap Value Equity managers invest in predominately large capitalization companies believed to be undervalued or possessing lower than average price to book and price to earnings ratios. The companies are expected to have a near-term earnings rebound and realize their potential for capital appreciation.

Large Cap Growth Equity: Large Cap Growth Equity managers invest in predominately large capitalization companies that are expected to have above average prospects for long-term growth in earnings and profitability. Future growth prospects take precedence over valuation levels in the stock selection process.

Mid Cap Value: Mid Cap Value Equity managers invest primarily in mid-capitalization companies believed to be currently undervalued in the general market. Valuation issues take precedence over near term earnings prospects in the stock selection process. Market capitalizations are generally between core (large) equity companies and small capitalization companies.

Mid Cap Growth: Mid Cap Growth Equity managers invest primarily in mid-capitalization companies that are expected to have above average prospects for long-term growth in earnings and profitability. Future growth prospects take precedence over valuation levels in the stock selection process. Market capitalizations are generally between core (large) equity companies and small capitalization companies.

Small Cap Broad: Small Cap Broad Equity managers invest primarily in companies with relatively small capitalization. The companies typically have zero dividends or dividend yields below the broader market. The securities exhibit greater volatility than the broader market as measured by the risk statistics beta and standard deviation. Managers will generally invest in both value and growth stocks.

International Core Equity: International Core Equity managers invest in a well-diversified portfolio of mostly large issues in developed countries with liquid markets, resulting in characteristics similar to that of an index such as the Morgan Stanley Capital International (MSCI) EAFE Index.

Lifestyle: This style consists of funds whose primary objective is to split its investment assets among stocks, bonds, and other investment vehicles in an attempt to provide consistent return for the investor while diversifying an investor's assets among different types of investment products.

Treasury Inflation-Protected Securities (TIPS): TIPS are securities issued by the U.S. Treasury that offer inflation protection to investors. They have a fixed coupon rate but their principal value is adjusted at periodic intervals to reflect changes in the Consumer Price Index (CPI).

Core Bond: Core Bond managers construct portfolios to approximate the investment results of the Barclays Capital Government/Credit Bond Index or the Barclays Capital Aggregate Bond Index with a modest amount of variability in duration around the index. The objective is to achieve value added from sector and/or issue selection.

Stable Value: Seeks to provide a competitive level of income over time while preserving the principal value. Returns are expected to be above that of a money market fund.

Money Market: This style consists of open-end mutual funds that invest in low-risk, highly liquid, short-term financial instruments and whose net asset value is kept stable at \$1 per share. The average portfolio maturity is 30 to 60 days.

<u>Indices</u> Glossary

Standard & Poor's 500 Index: The S&P 500 Index is a capitalization weighted index comprised of 500 stocks chosen for market size, liquidity, and industry group representation. The S&P 500 Index is constructed to represent a broad range of industry segments in the U.S. economy. The S&P 500 focuses on the large-cap segment of the market with over 80% coverage of US equities. Criteria for inclusion include financial stability (minimize turnover in the index), screening of common shares to eliminate closely held companies, and trading activity indicative of ample liquidity and efficient share pricing. Companies in merger, acquisition, leveraged-buy-outs, bankruptcy, restructuring, or lack of representation in their representative industry groups are eliminated from the index.

KL Domini 400 Social Index: KL Domini 400 Social Index is a market capitalization-weighted common stock index. It monitors the performance of 400 U.S. corporations that pass multiple, broad-based social screens. The Index consists of approximately 250 companies included in the Standard & Poor's 500 Index, approximately 100 additional large companies not included in the S&P 500 but providing industry representation, and approximately 50 additional companies with particularly strong social characteristics.

Russell 1000 Value Index: Russell 1000 Value index measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

Russell 1000 Growth: Russell 1000 Growth index measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

Russell Mid Cap Value Index: Russell Mid Cap Value index measures the performance of the mid-capitalization sector of the US equity market. It invests in those Russell Midcap Index companies with lower price-to-book ratios and lower forecasted growth.

Russell Mid Cap Growth Index: Russell Mid Cap Growth index measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Growth index.

Russell 2000 Value Index: Russell 2000 Value index measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

Russell 2500 Index: Russell 2500 index measures the performance of the 2,500 smallest companies in the Russell 3000 Index, which represents approximately 17% of the total market capitalization of the Russell 3000 Index.

Russell 2000 Index: Russell 2000 index measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index.

Morgan Stanley Capital International (MSCI) EAFE Index: Morgan Stanley Capital International (MSCI) EAFE index is composed of approximately 1000 equity securities representing the stock exchanges of Europe, Australia, New Zealand, and the Far East. The index is capitalization-weighted and is expressed in terms of U.S. dollars.

Morgan Stanley Capital International (MSCI) ACWI Index: Morgan Stanley Capital International (MSCI) ACWI Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets and is expressed in terms of U.S. dollars.

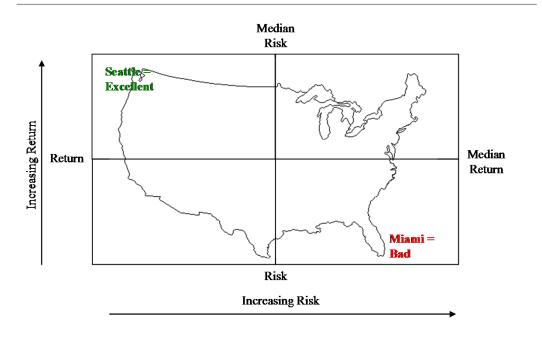

Barclays Capital U.S. TIPS Index: The Barclays Capital U.S. TIPS Index represents securities that protect against adverse inflation and provide a minimum level of real return. To be included in the index, bonds must have cash flows linked to an inflation index, be sovereign issues denominated in U.S. currency, and have more than one year to maturity.

Barclays Capital Aggregate Bond Index: The Barclays Capital Aggregate Bond index includes fixed rate debt issues rated investment grade or higher by Moody's Investors Service, Standard and Poor's, or Fitch Investor's Service, in that order. All issues must have at least 1 year left to maturity and have an outstanding par value of at least \$100 million.

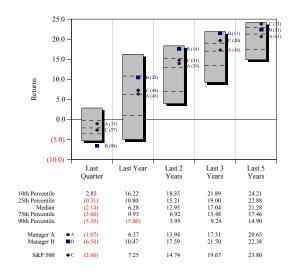

CAPITAL

90-Day U.S. Treasury Bills: 90-Day U.S. Treasury Bills provide a measure of riskless return. The rate of return is the average interest rate available on the beginning of each month for a Treasury Bill maturing in ninety days.
