2044/45	64.75	175.73	111.04	111.10	115.7

Note: The case reflects a scenario where a number of market partcipants perform strategic seasonal bidding across all seasons to counter the downward pricing pressure on the overall annual capacity price that may result from the revised seasonal capacity auction construct.

Stochastic analysis input/output data has not been published in this appendix due to large file size.

Refer to Section 8 of NIPSCO's 2024 IRP report for a description of the methodology associated with developing stochastic iterations for natural gas prices, power prices, NIPSCO load, wind generation, solar generation, and thermal unit outages.

Fleet Portfolio Summary by Scenario

Component	Description
Portfolio Generation Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, Production Tax Credits, contract (PPA) costs, and net market purchases from the MISO energy market
Resource Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, Production Tax Credits, and VOM
Contract Purchases Cost	The sum of all contract or PPA costs plus costs associated with new DSM programs
Market Sales Cost	Costs associated with energy market sales to MISO
Market Purchases Cost	Costs associated with energy market purchases from MISO

Market Scenario --> **Ref**

Fleet Portfolio Summary by Scenario

Component	Description
Portfolio Generation Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, Production Tax Credits, contract (PPA) costs, and net market purchases from the MISO energy market
Resource Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, Production Tax Credits, and VOM
Contract Purchases Cost	The sum of all contract or PPA costs plus costs associated with new DSM programs
Market Sales Cost	Costs associated with energy market sales to MISO
Market Purchases Cost	Costs associated with energy market purchases from MISO

Fleet Portfolio Summary by Scenario

Component	Description
Portfolio Generation Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, Production Tax Credits, contract (PPA) costs, and net market purchases from the MISO energy market
Resource Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, Production Tax Credits, and VOM
Contract Purchases Cost	The sum of all contract or PPA costs plus costs associated with new DSM programs
Market Sales Cost	Costs associated with energy market sales to MISO
Market Purchases Cost	Costs associated with energy market purchases from MISO

Market Scenario --> **DR**

Fleet Portfolio Summary by Scenario

Component	Description
Portfolio Generation Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, Production Tax Credits, contract (PPA) costs, and net market purchases from the MISO energy market
Resource Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, Production Tax Credits, and VOM
Contract Purchases Cost	The sum of all contract or PPA costs plus costs associated with new DSM programs
Market Sales Cost	Costs associated with energy market sales to MISO
Market Purchases Cost	Costs associated with energy market purchases from MISO

Market Scenario --> **AER**

Fleet Portfolio Summary by Scenario

Component	Description
Portfolio Generation Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, Production Tax Credits, contract (PPA) costs, and net market purchases from the MISO energy market
Resource Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, Production Tax Credits, and VOM
Contract Purchases Cost	The sum of all contract or PPA costs plus costs associated with new DSM programs
Market Sales Cost	Costs associated with energy market sales to MISO
Market Purchases Cost	Costs associated with energy market purchases from MISO

Market Scenario --> **AI**

Revenue Requirement Summary by Component (nominal $) - Portfolios by Scenario

Component	Description
Total Portfolio Cost	The total variable costs associated with operating the portfolio, including fuel, emissions, VOM, variable (FPO) costs, and net market purchases from the MISO energy market the sum of Total Owned Cost, Net Market Purchases, and Contract Cost
Total Owned Cost	The sum of all variable costs associated with owned generating assets, including fuel, emissions, and VOM
Net Market Purchases	The net cost of energy purchases from the MISO energy market
Contract Cost	The sum of all contract or PPA costs plus costs associated with must-(off)/must-run
FOM	The sum of fixed operations and maintenance costs associated with existing and new assets
FOM - Existing	The sum of fixed operations and maintenance costs associated with existing assets
FOM - New	The sum of fixed operations and maintenance costs associated with new assets
Energy Transmission	The sum of transmission costs associated with energy purchases
Taxes	The income and property taxes associated with existing and new assets
Tax Credit Benefits	The grossed up tax credits associated with new clean energy and storage resources (ITC, PTC, or 48E)
Capital Charge	The return on rate base associated with existing and new assets
Other Fixed Charges	Cash Payouts to Tax Equity partner
Total Revenue Requirement	The sum of Total Portfolio Cost, Fixed, Book Depreciation, Taxes, Capital Charge, and Other Fixed Charges
