The intended project concerns me for multiple reasons. Primarily, it ignores the needs of the most marginalized & vulnerable members of our community by continuing to build transit infrastructure in such a way that shows precedence to automobiles. Mass transit and the riders of, have not been shown proper consideration. Second, this plan ignores the decreasing rates of automobile traffic on our existing bridges. Third, the planned downtown bridge will further destroy our remaining stock of historic structures or simply place them so close to an elevated roadway that their potential reuse will be substantially limited. Fourth, polls have shown the majority of people in the metropolitan area would prefer a new bridge - the East End Bridge solution. Why is democracy being subverted? Please place the project up for a vote so citizens can determine how their tax dollars are best spent. Fifth, there is no need to build a tunnel leading to the East End Bridge - this is a waste of resources. Please consider

this plan, we need better Kentucky mass transit in Louisville
to attract skilled young professionals and retaining those that currently
reside here. Also, please abandon plans to dig an unnecessary tunnel.
