

Louisville-Southern Indiana Ohio River Bridges Project

Meeting Summary

Section 4 Open House June 5, 2007

A Public Open House was held on June 5, 2007 at Springdale Community Church in Louisville, KY to discuss issues related to the Exploratory Tunnel and Access Ramp for Section 4, the Kentucky East End Approach, part of the Louisville-Southern Indiana Ohio River Bridges Project (LSIORBP), with the design consultant team for Section 4, H.W. Lochner, Inc.

Approximately 240 persons attended the public meeting during the 4:00 p.m. to 8:00 p.m. time frame the exhibits were available for viewing. Bridges Project team members were available to conduct the meeting, answer questions, and record questions and concerns.

Three separate registration tables were set up for the various entrances to the common room. At registration, attendees were asked to sign in and were given handouts showing the Exploratory Tunnel and Access Ramp and a comment form. Attendees were also directed to the Fireside Room in the rear of the building to view a looped nine-minute PowerPoint presentation concerning the Exploratory Tunnel and Access Ramp.

Overall Project materials were also available at several locations around the common room including the Bridges contact cards, brochures, and KYTC Right-of-way booklets. The common room was divided into four “stations,” which allowed attendees to move around the room and locate the station where they had concerns or questions. The stations included a General Bridges Project Station, two Section 4 Design Stations, and an Environmental/Historic Station. Team members were present at each station to answer and record questions and concerns. The recorded comments received are included as part of this summary and were received at the design stations.

As can be seen from the recorded questions and comments, attendees had a varied array of concerns, but the most often voiced topics included project schedule for both right-of-way and construction activities, noise abatement, blasting and vibration concerns, landscaping, lighting, and maintenance of traffic during construction. The section consultant contacted attendees after the meeting who submitted written comments asking specific questions via phone and/or email in an attempt to discuss their concerns.

Written Comments Received

Build it! Then 8664!: *unknown*

Interesting, informative. Unanswered questions: 1) When will acquisition of condemned properties occur?; 2) How do condominium associations deal with the two fold buying of properties (i.e. the owner and the home owners association)? How can a fair price be agreed upon by these two entities?; 3) How severe will blasting be? How do we make sure property within seismic zone (or whatever it is called) gets monitored for cracks, damage, etc.?; 4) How does a location not become a work zone? How did Bridgepointe and Dannehower, etc. become non-work zones? (Looks like the rich and connected have more of a say than middle class condo owners.): *Barbara Roche*

Please contact me: *Don and Jan Drayer*

Very informative: *unknown*

Can the aerial layout of the project from Shadow Wood to the river be procured in a form similar to the colored "Exploratory Tunnel and Access Ramp" form? Excellent presentation and materials: *Gordon Ragan*

Very nice presentations. I don't like this project having piggy back effect of the downtown bridge and spaghetti junction project. I feel access to and from Highway 42 from tunnel entrance or exit roads (sic). Thanks for the show and tell: *Al Getlin*

Very nice presentation and format for gaining information. I may e-mail questions that may arise later. Thank you: *Cissy Maloney*

When will the "Financial Plan" for the total Bridge Project be completed? Re probable blasting damage, if one is beyond the 500' radius, how can an inspection be requested? Has the cost of the tunnel only increased to 240 million? How does that affect to total project cost?: *Craig Oliver*

Please include website address on your handout materials. Thanks!: *unknown*

The film that was offered today was very knowledgeable and explained about the exploratory tunnel. As we moved to the pictorial display- Ms. Taylor was very helpful while informing us of the options and changes coming to our community of Bridgepointe. She is a true asset to your company. We look forward to "Lochner" in the future working with all that may be concerned in Bridgepointe: *Robert and Sharon Prince*

Informative – well put together – concise – I enjoyed the presentation: *Jack Wood*

Louisville-Southern Indiana Ohio River Bridges Project

1.) Please spare no expense to minimize noise from finished highway/tunnel. 2.) Desperately need a traffic light at intersection of U.S. 42 and Marina Drive. 3.) Need sidewalk/bike path all along U.S. 42 from I-264 to Prospect: *unknown*

I was told at several previous meetings that the grade of the roadbed would be 1% or less on the East end approach. What I have seen today looks to be much steeper than 1%. Is it the visuals or is the 1% grade out of consideration? I am concerned about truck noise: *J. Russell Stein*

This was a very high quantity presentation and much needed to help residents better understand what to expect, both during and post-construction. Thanks: *Richard C. Otto*

Video was excellent! The update was very informative, and the team members were very helpful and knowledgeable. We are looking forward to experiencing this “top notch” project. We appreciate the detailed planning being done to limit travel disruptions and environment impacts: *Ken and Carol Dicket*

Build it fast: *Buddy Naber*

Excellent meeting and presentations. All our questions answered. Appreciate the continuing project updates: *Wayne and Sherry Schneider*

I found the meeting very informative and answered all of the questions I had concerns about. Thanks for the info: *T. L. Beck*

If you travel west on HWY 42 from Prospect, how do you go north to Indiana on the new bridge system? What is the cost for the tunnel, and the reason for the tunnel? What occurs if the exploratory tunnel provides evidence that the tunnel is not feasible? How long does the exploratory tunnel process take, and what affects will it have on nearby communities? If the tunnel was eliminated, would it be possible to go north to Indiana when traveling west on Hwy 42 from Prospect? If the tunnel is determined to not be feasible, what affect would this have on the east end bridge?: *Bryce Emison*

Debby, please contact me – I believe the bridge is a horrible idea, but I have questions. I am in negotiations for a large piece of property, and I need some questions answered. Thank you: *Tim Cooper*

Traffic concerns. Large trucks are still getting lost and turning south on W.P.B. Rd. thinking they can get back to the Snyder. Even with a new (small) sign at W.P.B. at 42 and W.P.B. at Chamberlain Lane, large trucks regularly get hung up at the dog-leg corners or tear up the roadbed and vegetation. Hope you can address this with public works as my Wolf Pen neighbors and I still have this question: *Alice Gunnison*

Comments Recorded

Two right turn arrows are a problem (on 42).

Harbor at Harrods Creek Condos R/W “That is our income; do they realize that?” Heavy negotiations will be needed.

Do NOT want high-mast lighting.

Traffic enforcement needed at U.S. 42 red light.
