PREFERRED VISUAL ACUITY NOTATIONS

DISTANT VISION. Use Snellen notation with test distance of 20 feet. (Examples: 20/100, 20/60). For acuities less than 20/200, record distance of which 200 foot letter can be recognized as numerator of fraction and 200 as denominator. (Examples: 10/200, 3/200). If the 200 foot letter is not recognized at 1 foot, record abbreviation for best distant vision as follows:

HM HAND MOVEMENTS

PLL PERCEIVES AND LOCALIZED LIGHT IN ONE OR MORE QUADRANTS

LP PERCEIVES BUT DOES NOT LOCALIZE LIGHT

No LP NO LIGHT PERCEPTION

NEAR VISION. Use standard A.M.A. notation and specify best distance at which pupil can read.

(Example: 14/70 at 5 in.)

TABLE OF APPROXIMATE EQUIVALENT VISUAL ACUITY NOTATIONS

These notations serve only as an indication of the approximate relationship between recordings of distant and near vision and point type sized. The teacher will find in practice that the pupil's reading performance may vary considerably from the equivalents shown.
