

Substance Use Outpatient Treatment

Location: Clinic

Client: Parent or Youth

Level of Need:

Level 1: Individual Addictions Counseling only, due to group services not being appropriate

Level 2: Low Intensity-Includes group therapy plus individual and family sessions

Units for six (6) drug screens are provided with this referral.

Payer: DCS/MCO/MRO

Summary:

This service is referred as a result of a Substance Use Disorder Assessment recommendation or when a client is stepping down from a residential treatment program. When Substance Use Treatment is referred a referral to Redwood Toxicology is automatically generated in KidTraks. The Redwood referral is linked to the Substance Use Treatment referral to cover the drug screens provided during treatment.

Services may be provided for clients of all ages with a substance related disorder and with minimal manageable medical conditions, minimal withdrawal risk, or emotional, behavioral cognitive conditions that will not prevent the client from benefiting from this level of care. A variety of scientifically based approaches to substance use recovery exists. Recovery prescribed for all clients must be evidenced based. Substance use recovery can include behavioral therapy (such as counseling, cognitive therapy, or psychotherapy), medications, or their combination. Effective recovery attends to multiple needs of the individual, not just his or her substance use. To be effective, recovery must address the individual's substance use and any associated medical, social, psychological, vocational, and legal problems.
