Summary includes the a summary of the Sales Ratio Study for each
Township and Class of property

Each **Individual Property Class has its own tab**. When you open a tab, you will find all of the
sales data for that Property Class, the ratio study, trend factor, and the formulae used in the calculations.

Comm-Ind Vacant Calculations holds all Comm-Ind Vacant properties that were used to determine trend factor
for that class. Property record cards were pulled at random throughtout the county.
A local appraiser provided current market values of the properties listed. The appraised amount
was used as the sales price for the purpose of determining a trend factor.
The ratio study calculations are also done on that page for that property class.

Workbook lists all Trended parcels in the county.

Notes:

1. Residential Improved: Grassy Fork, Pershing, Salt Creek, and Washington Townships were combined due to a low number of sales in each.

2. Residential Vacant: Grassy Fork, Pershing, Salt Creek, Washington, Vernon, Owen Pershing, Hamilton, Carr, and Driftwood Townships were combined due to a low number of sales in each.

3. Ag Improved: Grassy Fork, Salt Creek, Washington, Jackson, and Driftwood Townships were combined due to a low number of sales in each.

4. Commerical/Industrial was combined due to low industrial sales throughout the county

4a. Comm/Ind Improved was combined in all townships except Jackson due to a low number of sales

4b. Comm/Ind Vacant was combined for all townships due to a low number of sales
