Ligustrum obtusifolium is a semi-evergreen to deciduous, large foliage shrub in the olive family. Its leaves are opposite, simple, oblong, 1 to 2 inches long, dark green above and lighter below with a rounded or blunt tip and base. Blunt-leaved privet has short panicles of white flowers that are often dense, very fragrant and appear in late spring. The fruit is shiny and blue-black with a white waxy bloom, smaller than ¼ inch in diameter that ripens in the fall and persists into the following Spring. The bark is smooth and grayish brown with short, light colored horizontal lenticels.

In United States, Ligustrum obtusifolium can be found throughout the eastern and south-central states. It can be seen along roadsides, in old fields and in other disturbed habitats and in a variety of undisturbed natural areas, including bogs, wetlands, floodplains, old fields, calcareous glades and barrens, and mesic hardwood forests. In Indiana, privet is locally abundant throughout the state in riparian forests.

There are approximately 50 Ligustrum species that are native to Europe, North Africa, and Asia. Ligustrum spp. have been cultivated and developed into several horticultural varieties, and were introduced to North America as a common hedge in landscaping. Ligustrum obtusifolium is native to Japan.

Invasive Plants are a Threat to:
• Forests and wetlands
• Native plants
• Perennial gardens
• Wildlife
• Lakes and rivers
• Human Health
• Farmland

IPSAWG Recommendation:
• Do not buy, sell or plant blunt-leaved privet in Indiana.
• Help by eradicating blunt-leaved privet on your property.
• Also, avoid other species of privet (Ligustrum spp.); these species are considered invasive in many parts of the Midwest.

This ranking illustrates the results of an assessment conducted by the Invasive Plant Species Assessment Working Group (IPSAWG), which is made up of many organizations and agencies concerned about invasive plant species. IPSAWG’s goal is to assess which plant species may threaten natural areas in Indiana and develop recommendations to reduce their use in the state. For more information about IPSAWG and the assessment tool used to rank invasive species, visit their website: www.invasivespecies.IN.gov
Eight Easy Ways to Combat Invasive Plants

You can help stop the spread of invasive plants by following these 8 easy guidelines:

1. Ask for only non-invasive species when you acquire plants. Request that nurseries and garden centers sell only non-invasive plants.
2. Seek information on invasive plants. Sources include botanical gardens, horticulturists, conservationists, and government agencies.
3. Scout your property for invasive species, and remove invasives before they become a problem. If plants can’t be removed, at least prevent them from going to seed.
4. Clean your boots before and after visiting a natural area to prevent the spread of invasive plant seeds.
5. Don’t release aquarium plants into the wild.
6. Volunteer at local parks and natural areas to assist ongoing efforts to diminish the threat of invasive plants.
7. Help educate your community through personal contacts and in such settings as garden clubs and civic groups.
8. Support public policies and programs to control invasive plants.
