The potentiometric surface map of the bedrock aquifers was mapped by contouring the elevations of 571 points. This map was generated to show areas of different groundwater levels. The groundwater level constantly fluctuates in response to rainfall, evapotranspiration, groundwater movement, and other factors. The map is generated at a scale of 1:24,000 and is based on data from the Indiana Department of Natural Resources. The map was created by Robert K. Schmidt and Eric J. Holcomb, Governor. It is intended to be used for educational and informational purposes only and may not be suitable for legal or engineering applications.
