Description:

Abstract: This file is a digital geospatial line coverage of bedrock-surface topography for Boone County, Indiana. The mapping was conducted using the water well record data as well as previously published reports and maps of the region. Primary attribute is the elevation of the bedrock surface.

Purpose: Display and/or analyses requiring bedrock topography contours for Boone County, Indiana. The coverage is suitable for use in a Geographic Information System.

Access_Constraints: This file is available to anyone, but access may be contingent on written request, specific terms relevant to the agency or person making the request, and/or current freedom of information statutes in the State of Indiana.

Use_Constraints: Acknowledgement of the following agency in products derived from these data: Indiana Department of Natural Resources, Division of Water. This map was compiled by staff of the Indiana Department of Natural Resources, Division of Water over many years using data believed to be reasonably accurate. However, a degree of error is inherent in all maps. This product is distributed "as-is" without warranties of any kind, either expressed or implied. The maps are intended for use only at the published scale.

DATA_QUALITY_INFORMATION

Attribute_Accuracy:

Attribute_Accuracy_Report: The mapping was conducted by hand on mylars over base maps of 1:24,000 quadrangles.

Logical_Consistency_Report:

Completeness_Report: Every attempt was made to include data from water well records that had complete information, including complete location, construction, pump test, and lithological information. There were a few areas in the county that had insufficient information due to the particular drillers in the area who chronically under-report information on water well records or because of the pervasive insufficient supply of water. Most water well records for poorly producing wells are missing information.

Positional_Accuracy: The locations of the contours are most often based on a combination of the water well record data and base map surface contours. The locations of actual wells were usually estimated from 7.5 minute topographic maps, and visual siting of wells was not always possible. Many locations were based on location of the street address on the water well record.

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report: Locations of contour lines that are dependent on located well records might be offset slightly if the well is mislocated. Georeferencing of the maps was conducted after the maps were vectorized from a scanned raster image. A minimum of four reference tic marks were used to register the image, and UTM coordinates were assigned to each tic mark before the coverage was transformed to the map projection. The maps were retraced onto mylar for stability, but any positional changes from the paper maps were retained. There is also some inherent errors in transferring tic marks from paper to mylar to digital form, so additional error is expected in this step.

Vertical_Positional_Accuracy:

Vertical_Positional_Accuracy_Report: The elevation of each contour is dependent on the field-located surface elevation of the water well records. If the well is mislocated, the surface elevation is wrong, or the driller's estimation of depth-to-bedrock is incorrect, then the resulting bedrock elevation will be incorrect, as well. Horizontal positional errors will result in vertical positional errors in an elevation contour map such as this one.

Process_Step:

Process_Description: Staff of the IDNR-DOW conducted mapping for this project from 1997 through 2002. The mapping was typically at a 7.5 minute quadrangle scale of 1:24,000. Data were selected by careful evaluation of water well records to determine if the water well records were located and if they contained complete and reasonable information. In other areas, where appropriate, additional data such as seismic shots or oil and gas logs were used. The mapping was conducted on a mylar sheet (on file at the IDNR-DOW).

Process_Step:

Process_Description: The mylar was scanned using a wide-bed black-and-white scanner and saved as a raster image. The raster image was vectorized using a tracer program (ArcScan). The vector data were georeferenced to UTM Zone 16, NAD27. The arc coverage was attributed with the appropriate elevation value. (Personnel: Glenn Grove)

ENTITY_AND_ATTRIBUTE_INFORMATION

Overview_Description:

Entity_and_Attribute_Overview: The points in this file represent calculations of bedrock-surface topography determined at or around water wells. The file was created for the purpose of characterizing the bedrock surface as a tool to help assess the ground water resources of Boone County, Indiana .

Entity_and_Attribute_Detail_Citation:

Detailed_Description:

Entity_Type:

Entity_Type_Label: Boone_bedrock.aat
Entity_Type_Definition: arc attribute table
Entity_Type_Definition_Source: None

Attribute:

Attribute_Label: elevation
Attribute_Definition: the elevation of the bedrock surface in feet above mean sea level
Attribute_Definition_Source: IDNR-DOW, Ground Water Section
Attribute_Domain_Values:
Range_Domain:
Range_Domain_Minimum: 550
Range_Domain_Maximum: 900
Attribute_Units_of_Measure: integer
Attribute_Measurement_Resolution: 25 foot contours.
Attribute_Value_Accuracy_Information:
Attribute_Value_Accuracy:
Attribute_Value_Accuracy_Explanation:

Attribute:

Attribute_Label: Mod
Attribute_Definition: Modulo of elevation value. Used to assign color or patterns to contour classes
(lines).

Attribute_Definition_Source: IDNR-DOW Ground Water Section

Attribute_Domain_Values:

Range_Domain:
Range_Domain_Minimum: 00
Range_Domain_Maximum: 75
Attribute_Units_of_Measure: positive integers
