1999 STANDARD SPECIFICATIONS WITH SUPPLEMENTALS
<http://www.state.in.us/dot/div/contracts/standards/book/index.html/>

PREFACE

These Supplemental Specifications are a compilation of all revisions to the 1999 Standard Specifications passed by the INDOT Specification Committee and approved by the Chief Engineer. The effective date for this issue is shown on the front. Updated Supplemental Specifications are published twice a year with effective dates of March 1 and September 1.

These revisions to the Standard Specifications are accomplished by deleting material from the Standard Specifications and inserting new material. Deletions are usually shown first, followed by new or replacing material. In tables and charts with columns, the new material appears below the deletions. Deletions from the Standard Specifications are identified by two ways, either by overstriking the deleted material or by written instructions when the deleted materials are complete paragraphs and five consecutive lines or more. New material that is inserted in the specifications is printed in *italics*.

The written instructions include the section number and the first affected line number. Such instructions no longer include the Standard Specifications page number. Line numbers which appear in the Standard Specifications also appear in the Supplemental Specifications material. Line numbering is shown as a continuation of the line numbering of Standard Specifications sections which are extended by means of Supplemental Specifications. The integrity of the Standard Specifications line numbering system is undisturbed by the Supplemental Specifications.

When deleting whole paragraphs, delete the blank space preceding the first paragraph to be deleted and leave the blank space following the last paragraph to be deleted.

Examples:

SECTION 910, BEGIN LINE 859, DELETE AND INSERT AS FOLLOWS:

(e) Square Steel Posts. ~~A type C certification shall be required~~ *Square steel sign post shall be covered by the type of certification specified in the Frequency Manual and* in accordance with 916.

SECTION 913, DELETE LINES 4143 THROUGH 4152.

SECTION 913, AFTER LINE 4153, INSERT AS FOLLOWS:

The last line of new material may appear several lines after line 4153. Everything from the beginning of the new material to the end of the new material is between lines 4153 and 4154.

The line numbers shown in the 1999 Standard Specifications do not reflect the counting of lines through tables. Therefore, lines in tables will be identified by the last line number preceeding the table with alphabetic letters for each line in the table. Such line numbers will be identified, as an example, as Lines 137a THROUGH 137g.
