GENERAL NOTES:

1. These dimensions are based on a 150 curb height. They shall be proportionally adjusted for other curb heights.

2. Where site inaccessibility precludes construction to the width shown, such width may be decreased to a minimum of 90.

3. The bottom edge of the curb ramp shall be flush with the edge of adjacent pavement and gutter line.

4. Landing areas at the top of curb ramps shall have maximum cross slope of 50:1 in any direction. When site inaccessibility precludes a landing slope of 50:1 in any direction, the slope perpendicular to the curb face shall not exceed 50:1.

5. If site inaccessibility precludes construction to the width shown, the landing width may be decreased to 90 minimum. The running slope of the curb ramp may be steepened to a maximum of 10:1 for a maximum 150 rise.

6. Drainage inlets should be located uphill from curb ramps to prevent puddles at the path of travel.

7. See Standard Drawing 804-SWCR-12 for improved access on narrow sidewalks.

8. Algebraic difference in grade between the base of curb ramp and the gutter shall be limited to less than 11%. If it is not practical, a 610 wide level strip shall be provided. See detail sketch.

9. Minimum recommended width of curb ramp is 1220.
