The values of L for speeds of 45 mph or greater are based on the equation $L = W \times S$. The values for speeds of 40 mph or lower are based on the equation $L = W \times S^2/60$. For both equations, L and W are in feet and S is in mph. These equations are taken from the MUTCD. The taper lengths used in the field, may be either the values provided in the table or calculated values from the equations. For offset widths other than those used in the table, the taper lengths shall be calculated based on the equations.

LEGEND

L = Minimum length of taper in feet.
 S = Posted speed limit prior to the construction zone in km/h.
 W = Width of offset in feet.
