PROCEDURE FOR SPLICING PARTIALLY DRIVEN PILING

1. Upper Pile Section
Prepare outside of both flanges and one side of web by beveling to a 45° angle. Prepare all surfaces to be welded by grinding.

2. Lower Pile Section
Prepare top of pile by restoring it to its original cross section. Grind all surfaces to be welded, extending 1/2" beyond weld area(s).

3. Upper Pile Section
Fillet weld web splice plate to upper pile section at two locations.

4. Lower Pile Section
Tack weld two backer plates to inside of flange.

NOTES
1. Steel H piling may be spliced in a horizontal position prior to driving, using splice plates and web and flange welds as shown.
2. Two flange splice plates, one web splice plate, and four backer plates will be required per splice.
3. All fillet welds shall be single pass.
4. See table for splice plate dimensions W and F.
