PROCEDURE FOR SPLICING PARTIALLY DRIVEN PILING

1. Upper Pile Section

Prepare outside of both flanges and one side of web by beveling to a 45° angle. Prepare all surfaces to be welded by grinding.

2. Lower Pile Section

Prepare top of pile by restoring it to its original cross section. Grind all surfaces to be welded, extending 1/2" beyond weld area(s).

3. Upper Pile Section

Fillet weld web splice plate to upper pile section at two locations.

4. Lower Pile Section

Tack weld two backer plates to inside of flange.

NOTES

- Steel H piling may be spliced in a horizontal position prior to driving, using splice plates and web and flange welds as shown.
- Two flange splice plates, one web splice plate, and four backer plates will be required per splice.
- All fillet welds shall be single pass.
- See table for splice plate dimensions W and F.

SPLICE PLATE AND BACKER PLATE DIMENSIONS

H-PILE SIZE	HP 10	HP 12	HP 14
Flange Splice Plate, F	7"	8 1/4"	10 1/4"
Web Splice Plate, W	5 3/8"	6 3/4"	8"
Backer Plate Length, L	4 1/8"	5"	6 1/4"
NOTE: Splice plate thickness = 3/8" Backer plate thickness = 1/4"

CHIEF ENGINEER DATE

Procedure continued on Standard Drawing E 701-BPIL-04.

PROCEDURE FOR SPLICING PARTIALLY DRIVEN PILING (cont.)

5. Combine Pile Sections

Lift and hold upper pile section into place, maintaining 1/4" gap between upper and lower pile sections by using the remaining two backer plates as a spacing guide. Plumb the pile. Tack weld the untacked side of the two backer plates to the inside upper flange. Remove the backer plate spacers and tack weld them to the inside flange portion of the upper and lower sections of the pile. Fillet weld the remaining two sides of the web splice plate to the lower section.

WEB ELEVATION

FLANGE ELEVATION

END VIEW

NOTES

1. Steel H piling may be spliced in a horizontal position prior to driving, using splice plates and web and flange welds as shown.
2. Two flange splice plates, one web splice plate, and four backer plates will be required per splice.
3. All fillet welds shall be single pass.
- ④ See Standard Drawing E 701-BPIL-03 table for splice plate dimensions W and F.

6. Combined Pile Section

Complete Joint Penetration (CJP) weld the web. See Detail A.

7. Combined Pile Section

Complete Joint Penetration (CJP) weld both flanges. Grind weld smooth with the pile exterior face. See Detail B.

8. Combined Pile Section

Fillet weld the flange splice plates to the flanges.

90° HOOK

REINFORCING BAR NOTES

1. All dimensions on bending diagrams shall be measured out-to-out of bars.
2. All dimensions on details shall be measured on centerlines of bars, except where cover or cl. is indicated.
3. Bent bars will be given a numeric bar mark, e.g., 588. The last two digits, e.g., 88, indicate the mark. The characters preceding the last two digits, e.g., 5, indicate the size of the bar.
4. Bent reinforcing bars' marks on standard drawings will consist of the first digit as the bar size; the second digit, 7, indicating that it shall be placed in a bridge railing, or 8, indicating that it shall be placed in a bridge-railing transition, or 9, indicating that it shall be placed elsewhere; and the third and fourth digits as the serial number for that bar size.
5. Straight bars will be designated by size and length.
6. Standard size hooks shown shall be used on all hooked bars unless noted.
7. See the plans for lap and embedment lengths.

GENERAL NOTES

- ① See Standard Drawing E 706-MSRW-09 for plan view and additional reinforcing bars in the railing at the railing joints.
- ② See Standard Drawing E 731-MSEW-01 for coping details.
- ③ The thickness of the coarse aggregate No. 8 shall be equal to the combined thicknesses of the first two lifts of HMA, but not less than 6 in.
- ④ For moment slab thickness $\leq$ 15 in., this shall be 2'-0".
For moment slab thickness > 15 in., this shall be moment-slab thickness plus 12 in.
5. The moment slab shall be used only within the limits of the MSE wall.
6. Reinforcing bars in the moment slab shall be epoxy coated.
7. See Standard Drawing E 703-BRST-01 for reinforcing-bar bending diagrams and notes.

GENERAL NOTES :

1. Tolerances shown are maximum permissible variations from the dimensions shown on the plans or shop drawings. Tolerances shall not be considered cumulative. Longitudinal tolerances are based on design length. Casting length shall be adjusted to compensate for shrinkage and plastic flow.
2. End stirrup bars shall not be more than 2" from the end of the beam.
3. Mild reinforcing steel concrete cover tolerance shall be 1/8" to +3/8".

4 Tolerances for reinforcing bars for composite beam.

5 Variation of camber shall not be more than 1" on one span nor more than 1/2" between adjacent members to be measured at time of erection.

Permitted camber variation from design camber is as follows:

I-beam or bulb-tee beam: $\pm 1/8"$ per 10'-0" length with $\pm 1/2"$ maximum for member length of 80'-0" or less
 $\pm 1"$ maximum for member length of greater than 80'-0"

Box beam: $\pm 1/8"$ per 10'-0" length with $\pm 1/2"$ mm maximum

6 Tolerance in length of beam shall be checked after the final curing phase and within three days prior to shipping.

7 Horizontal-alignment tolerance shall be checked immediately after removal of forms and strand release, and prior to removal from bed.

8 At concrete bearing area, deviation from plane surface when tested in all directions of the plane surface with a steel straightedge shall not be more than $\pm 1/16"$.

GENERAL NOTES:

1. The pavement section for trucks count exceeding the values shown in (S) in the Legend shall be as shown elsewhere in the plans.
3. A temporary bridge or temporary pipe shall be used as specified. A 28'-0 clear roadway width shall be provided on a temporary bridge.
- ④ The connection of the temporary runaround to the existing pavement shall be outside the limits of the approach pavement removal.
- ⑤ Temporary pavement markings will be required as shown. The contractor shall have the option of using temporary tape or paint for all temporary pavement markings except where otherwise specified.
- ⑥ Delineators type D-2 (white) shall be placed at 30 ft maximum spacing on both sides throughout the length of the temporary runaround, including across the temporary structure. If a temporary bridge is used, type 3 object markers shall be placed at all four corners in accordance with the MUTCD.
- ⑦ Spacing of drums at this location shall be 20 ft.
- ⑧ If the runaround posted speed limit is greater than 30 mph the reverse curve sign, XW1-4 (36" x 36"), shall be used at this location.
If the runaround posted advisory speed limit is 30 mph or less, the reverse turn sign, XW1-3 (36" x 36") shall be used.

LEGEND:

- Delineator type D-2 (white)
- Ⓢ

Pavement section for truck count, AADTT < 500, shall be:

165 #/yd² HMA Surface, Type A, on
275 #/yd² HMA Intermediate, Type A, on
6 in. compacted aggregate, size No. 53, Base, on
Type III Subgrade Treatment
(See Genaral Note #1)

SECTION A-A

LEGEND

H_c = Overall diameter or rise (typ.)
 B_c = Overall diameter or span
 A = 8" min. for fill height less than 16'
 = 12" min. for fill height of 16' or more
 T_c = Trench cover depth over pipe
 W = $0.3 B_c$ or 9", whichever is greater
 E = Encasement
 L_B = Backfill length measured from toe to toe of the 2:1 slopes.

SECTION A-A
ROCK FOUNDATION

NOTES :

- Protective cover shall be constructed prior to running heavy equipment over installed pipes. The minimum covers are listed below:
 - 1.5' for $B_c \leq 18"$
 - 3' for $18" < B_c \leq 54"$
 - 4' for $B_c > 54"$
- For backfill purposes, paved shoulders, curbs, and sidewalks are considered pavement. See Standard Drawing E 715-BKFL-10 for pavement limits when curbs, paved shoulders, or sidewalks are present.
- Flowable or structure backfill shall be encased by compacted earth backfill. The minimum encasement shall be 2 ft. If necessary, the 2:1 slope between the flowable or structure backfill and the encasement shall be modified to maintain the minimum 2 ft encasement.

GENERAL NOTES

1. The invert grade of the grated box end section shall be the same as that of the pipe.
2. See Standard Drawing E 715-GBTO-04 for Details A, B, C, and D.
3. See Standard Drawings E 715-GBTO-05 through -08 for tables.
4. Type I grated box end section shall be used for mainline cross-culverts, outlet pipes within the clear zone.
5. See Standard Drawing E 715-GBTO-02 for bending diagrams.

CHIEF HIGHWAY ENGINEER DATE

GRATE REMOVED SECTION B-B

GENERAL NOTES

1. The invert grade of the grated box end section shall be the same as that of the pipe.
2. See Standard Drawing E 715-GBT0-04 for Details A, B, C, and D.
3. See Standard Drawings E 715-GBT0-05 through -08 for tables.
4. Type I grated box end sections shall be used for mainline cross-culverts' outlet pipes within the clear zone.
5. See Standard Drawing E 715-GBT0-02 for bending diagrams.

GENERAL NOTES

1. The invert grade of the grated box end section shall be the same as that of the pipe.
2. See Standard Drawings E 715-GBTT-05 and -06 for dimensions tables.
3. Type II grated box end sections shall be used for culverts parallel to the mainline within the clear zone.
4. See Standard Drawing E 715-GBTT-02 for bending diagrams.

less 6" ea. row)
(min. lap = 2'-11")

ANCHOR FOR TRIPLE PIPE INSTALLATION
FRONT ELEVATION

GENERAL NOTES

1. Circular reinforced concrete pipes shown.
For details of other pipe alternates, see
partial elevations on Standard Drawing
E 715-MPCA-02.

② For dimension enter chart on Standard
Drawing E 715-ANCH-01 with known
dimension D.

③ T = Clear distance between pipes.
For D less than 48", T = 2'-0".
For D of 48" to 96", T = 1/2 D
For D greater than 96", T = 4'-0".

④ No joint required if G is less than or
equal to 30'. One joint required if
G is greater than 30' but less than
or equal to 42'. Two joints
required if G is greater than 42'.

2²/₃" x 1/2" CORRUGATED ALUMINUM ALLOY PIPE-ARCH (RIVETED OR LOCK SEAM)
HEIGHT OF COVER LIMITS (ft.)

[illegible]

NOTE:

1. The tabulated cover depths shall be measured from the bottom of the asphalt or concrete pavement to the top of the pipe.
2. Dual entries in the "Corner Radius" column, such as $3/3\frac{1}{2}$, represent the following:
 - 3 - minimum corner radius allowed by AASHTO M 196.
 - $3\frac{1}{2}$ - corner radius typically available.
3. The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

14/22 $\frac{3}{4}$	87	63	32.1					1.2	17.3	1.2	17.3	1.2	17.3
16/24 $\frac{3}{4}$	95	67	37.0							1.2	17.1	1.2	17.1
16/26 $\frac{3}{4}$	103	71	42.4							1.2	16.9	1.2	16.9
18/27 $\frac{3}{4}$	112	75	48.0									1.3	16.5

NOTE:

- The tabulated cover depths shall be measured from the bottom of the asphalt or concrete pavement to the top of the pipe.
- Dual entries in the "Corner Radius" column, such as 8/18 $\frac{3}{4}$ represent the following:
8 - minimum corner radius allowed by AASHTO M 196.
18 $\frac{3}{4}$ - corner radius typically available.
- The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

NOTES:

1. The tabulated cover depths shall be measured from the bottom of the asphalt or concrete pavement to the top of the pipe.
2. 2. Dual entries in the ,Corner Radius, column, such as $8/18\frac{3}{4}$, represent the following:
 - 8 - minimum corner radius allowed by AASHTO M 36.
 - $18\frac{3}{4}$ - corner radius typically available.
3. The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

NOTES:

- The tabulated cover depths shall be measured from the bottom of the asphalt or concrete pavement to the top of the pipe.
- Dual entries in the "Corner Radius" column, such as 8/18 $\frac{3}{4}$, represent the following:
8 - minimum corner raduis allowed by AASHTO M 36.
18 $\frac{3}{4}$ - corner radius typically available.
- The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

**STEEL PIPE-ARCH SECTIONS
END STABILIZATION OF 3" x 1" CORRUGATED** ①

TYPICAL LONGITUDINAL SECTION

NOTES:

- ① In order to maintain their manufactured shape, all 3" x 1" corrugated steel pipe-arch sections shall have wire ties attached at each end as shown in the detail. The wire ties shall be attached across the largest vertical and horizontal dimension of the pipe-arch. The wire ties shall be installed by the manufacturer and shall remain in place until the on-site installation is complete.
- ② WWR shall be wired to every second circumferential bolt and every twelfth longitudinal bolt.

GENERAL NOTES

1. "X" entries in the table indicate that a thickness which satisfies the required design service life is not available.
2. The tabulated plate thickness for Structural Plate Steel Pipe and Pipe-Arches reflects the required thickness for the top and side plates. If the tabulated plate thickness is less than 0.280 in. the bottom plates shall be of the next greater available thickness.
3. Corrugated Aluminum Alloy Pipe and Pipe-Arches and Aluminum Alloy Structural Plate Pipe and Pipe-Arches are acceptable with the minimum thickness required to satisfy cover conditions for all non-abrasive sites with a structure pH $\geq$ 5.0.
4. Corrugated Aluminum Alloy Pipe and Pipe-Arches with bituminous paved invert and Aluminum Alloy Structural Plate Pipe and Pipe-Arches with concrete field paving are acceptable with the minimum thickness required to satisfy cover conditions for all abrasive sites with a structure pH $\geq$ 5.0.
5. Service life criteria apply to only reinforced concrete, corrugated metal, and structural plate metal pipe. Other materials which conform to the designated pipe type and height of cover parameters are acceptable for installation.
6. Service life criteria do not apply to Type 4 pipe.

REQUIREMENTS FOR REINFORCED CONCRETE PIPE PROTECTION

Pipe Slope	Minimum pH to Attain Design Service Life	
	50 Year	75 Year
Less than 3%	4.0	4.5
3% to 10%	4.5	5.0
Greater than 10%	5.0	5.5

For a structure pH lower than the minimums listed above, reinforced concrete pipe shall not be used.

ANCHOR

GENERAL NOTES

1. Circular pipes shown. For details of structural plate pipe-arches alternates, see partial elevations on Standard Drawing E 717-MPCA-02.
- ② For dimension, enter chart on Standard Drawing E 717-ANCH-01 with known dimension D.
- ③ T = Clear distance between pipes.
For D less than 48", T = 2'-0.
For D of 48" to 96" T = 1/2 D
For D greater than 96", T = 4'-0.
- ④ No joint required if G is less than or equal to 30'. One joint required if G is greater than 30' but less than or equal to 42'. Two joints required if G is greater than 42'.

2 Rows (3 - #6 x G less 6" ea. row)

GENERAL NOTES

1. Anchor straps shall be used at both upstream and downstream ends of all structural plate pipes and pipe-arches.
2. See Standard Drawing E 715-PASD-01 for anchor strap details.
3. Hook bolts and anchor straps shall be used for all structural plate pipes and pipe-arches with a diameter or span of 84" or greater.
4. See Standard Drawing E 715-PAHB-01 for hook bolt details.
5. Riprap shall be placed at the ends of pipe structures when shown on the plans.
- 6 For dimension, enter chart on Standard Drawings E 717-ANCH-01 or E 717-ANCH-02 with known dimension D or span and rise.

GENERAL NOTES

1. Anchor straps shall be used at both upstream and downstream ends of all structural plate pipes and pipe-arches.
2. See Standard Drawing E 715-PASD-01 for anchor strap details.
3. Hook bolts, and anchor straps shall be used at all structural plate pipes and pipe arches with a diameter or span of 84" or greater.
4. See Standard Drawing E 715-PAHB-01 for hook bolt details.
5. For dimension, enter chart on Standard Drawing E 717-ANCH-01 or E 717-ANCH-03 with known span and rise.
6. For dimension, enter chart on Standard Drawing E 717-ANCH-02 with known dimension D.

GENERAL NOTES

- 1

If underdrain outlet-pipe elevations are not shown on Underdrain Table, the minimum outlet-pipe slope shall be 0.3%. The minimum freeboard between the outlet-pipe outfall and the ditch line shall be 1'-0 for median ditches and 2'-0 for side ditches.
- 2

See Standard Drawing E 718-UNDR-06 for rodent screen details.
- 3

The #4 transverse bars in the upslope lug may be field cut to accomodate the outlet pipe or pipes. The 404 bars in the upslope lug may be moved to accomodate the outlet pipe or pipes.

GENERAL NOTES

1. Brick, block, or concrete may be used.
2. Precast catch basin type W may be substituted for catch basin type A.
3. 2" dia. pipe drain from bottom of curb to inlet. Aggregate to be placed around inlet end of pipe.
4. 3" dia. pipe to be kept open for drainage of subgrade or base until surface is placed.
5. Reinforcement required if Dim. A < 2'-6. Reinforcement not required if Dim. A ≥ 2'-6.
6. T = 8" for brick structure
T = 6" for segmental block structure

NOTES:

1. The rectangular Elastomeric Bearing Pad shall be placed with L dimension parallel to longitudinal bridge axis.
2. h_{rt} is defined as the summation of all internal elastomer thickness plus the two external layers thickness.
3. The Contractor shall check that the bearing seat is level. Grinding may be required to obtain a level seat.
4. The bridge seat shall be finished level at the time concrete is placed. Finished concrete shall be ground if necessary to ensure full and level contact between the seat and the bearing pads when the beams are set.

TABLE OF DIMENSIONS

Bearing Designation	Bearing Width W	Bearing Length L	Internal Elastomer Thickness h_{ri}	Number of Internal Elastomer Layers n	External Elastomer Thickness t_e	h_{rt}	Number of Steel Shims n_s	Bearing Total Thickness H
TH1	36"	12"	1/2"	5	9/32"	3 1/16"	6	3 11/16"
TH2	36"	14"	1/2"	6	9/32"	3 9/16"	7	4 5/16"
TH3	36"	17"	19/32"	7	5/16"	4 25/32"	8	5 5/8"
TH4	36"	19"	19/32"	8	5/16"	5 3/8"	9	6 5/16"

CROSS SECTION THROUGH ASSEMBLY

DETAIL A ③

LONGITUDINAL SECTION THROUGH ASSEMBLY

BEARING ASSEMBLY

② n_s is number of steel shims

NOTES:

- The bearing plate size shall be calculated as follows:
 $L_t = L + 1"$ $W_t = W_f + 2"$ or $W_t = W + 2"$ whichever is greater.
- The shim thickness is 0.1046 in., which corresponds to 12 gage stainless coils.
- Equivalent rolled angle shape with stiffeners may be used in lieu of welded plates.
- Minimum dimension required is $1 \frac{1}{2}" + \text{flange thickness} + \frac{1}{3}"$ (for shim plate).
- Minimum thickness $1 \frac{1}{2}"$
- See standard drawing E 726-BEBP-05 for Table of Dimensions.

ELASTOMERIC BEARING PADS TYPE S	
SEPTEMBER 2012	
STANDARD DRAWING NO. E 726-BEBP-05	
 REGISTERED No. 9750 STATE OF INDIANA PROFESSIONAL ENGINEER RICHARD L. VANCLEAVE	

1. Precast coping unit length shall be 10'-0".
2. Reinforcing bar size, length, and spacing shall be determined by the manufacturer.
3. All chamfered edges shall be 3/4".
4. See Standard Drawing E 703-BRST-01 for reinforcing-bar bending details and notes.
5. Leveling concrete is required when adjacent top panels do not provide a continuous surface on which to place the precast coping, e.g., stepped panels or rectangular panels on a sloping grade. Leveling concrete is not required when custom top panels provide a surface parallel to the finished grade.
6. Use only when leveling concrete is required.

NOTES

1. Coping joints shall coincide approximately with the panel joints. Reinforcing bars' ends shall be 2" short of near side of each joint.
- ② The front face of a cast-in-place coping shall match the front face of a precast coping where used in conjunction.
3. All chamfered edges shall be 3/4".
4. See Standard Drawing E 703-BRST-01 for reinforcing-bar bending details and notes.
