## GENERAL NOTES:

1. When the approach pavement is Continuously Reinforced Concrete Pavement (CRCP) or HMA over CRCP, the details shall be as shown elsewhere on the plans.

2. The width of the concrete sleeper slab shall match the width of the reinforced concrete bridge approach slab.

3. Reinforcing bars shall be epoxy coated.

4. Sleeper slab and terminal joint shall be concrete, Class A.
1. The joint opening width shall be 2.5 in. for expansion lengths of 150 ft or less, regardless of the joint setting temperature. For expansion lengths greater than 150 ft, the joint opening width shall be constructed based on the actual ambient temperature at the time of construction with the manufacturer's joint setting table. The expansion length shall be as shown on the plans.

2. The precompressed foam joint shall be able to accommodate both the minimum and maximum joint opening widths as shown below.

- Expansion length 250 ft or less
  - W(min.) = 1.3 in.
  - W(max.) = 3.7 in.
- Expansion length greater than 250 ft and less than 400 ft
  - W(min.) = 1.0 in.
  - W(max.) = 4.0 in.

3. See Standard Drawing E 503-CCPJ-02 for Type D-1 contraction joint details.

5. Expansion cap shall be placed with an air gap of 1/4 in. min. between end of dowel bar and end of cap. Expansion caps shall be placed on alternating end of the dowel bar.

6. Tinning or grooving of the concrete shall be terminated 6 in. in advance of the joint opening.

7. Jointed Reinforced Concrete Pavement (JRCP) thickness shall match the thickness of reinforced concrete bridge approach.

8. Underdrains shall be constructed when shown on the plans.

NOTES:

1. Underdrains shall be constructed when shown on the plans.

2. Type D-1 Contraction Joint shall be 3 in. (typ.) 3" (max.)

3. Transverse Construction Joint shall be 1 1/2" Ø Dowel Bar 1 1/2" Ø Spa. @ 12" (max.)

4. Expansion Joint with Load Transfer shall be Preformed Joint Filler 1" Thickness

5. Expansion Cap shall be placed with an air gap of 1/4 in. min. between end of cap and end of dowel bar. Expansion caps shall be placed on alternating end of the dowel bar.

6. Tinning or grooving of the concrete shall be terminated 6 in. in advance of the joint opening.

7. Jointed Reinforced Concrete Pavement (JRCP) thickness shall match the thickness of reinforced concrete bridge approach.

8. Underdrains shall be constructed when shown on the plans.

INDIANA DEPARTMENT OF TRANSPORTATION

TERMINAL JOINT, TYPE PCCP

SEPTEMBER 2020

STANDARD DRAWING NO. E 503-BATJ-02

DESIGN STANDARDS ENGINEER DATE 03/10/20

CHIEF ENGINEER DATE 04/02/20
1. The joint opening width shall be 2.5 in. for expansion lengths of 150 ft or less, regardless of the joint setting temperature. For expansion lengths greater than 150 ft, the joint opening width shall be constructed based on the actual ambient temperature at the time of construction with the manufacturer's joint setting table. The expansion length shall be as shown on the plans.

2. The precompressed foam joint shall be able to accommodate both the minimum and maximum joint opening widths as shown below.

- Expansion length 250 ft or less
  - W(min.) = 1.3 in.
  - W(max.) = 3.7 in.

- Expansion length greater than 250 ft and less than 400 ft
  - W(min.) = 1.0 in.
  - W(max.) = 4.0 in.

3. Pavement section to be shown on the plans. Minimum Thickness:

- 15 in. HMA for 12 in. RCBA
- 13 in. HMA for 10 in. RCBA

4. Tinning or grooving of the concrete shall be terminated 6 in. in advance of the joint opening.
