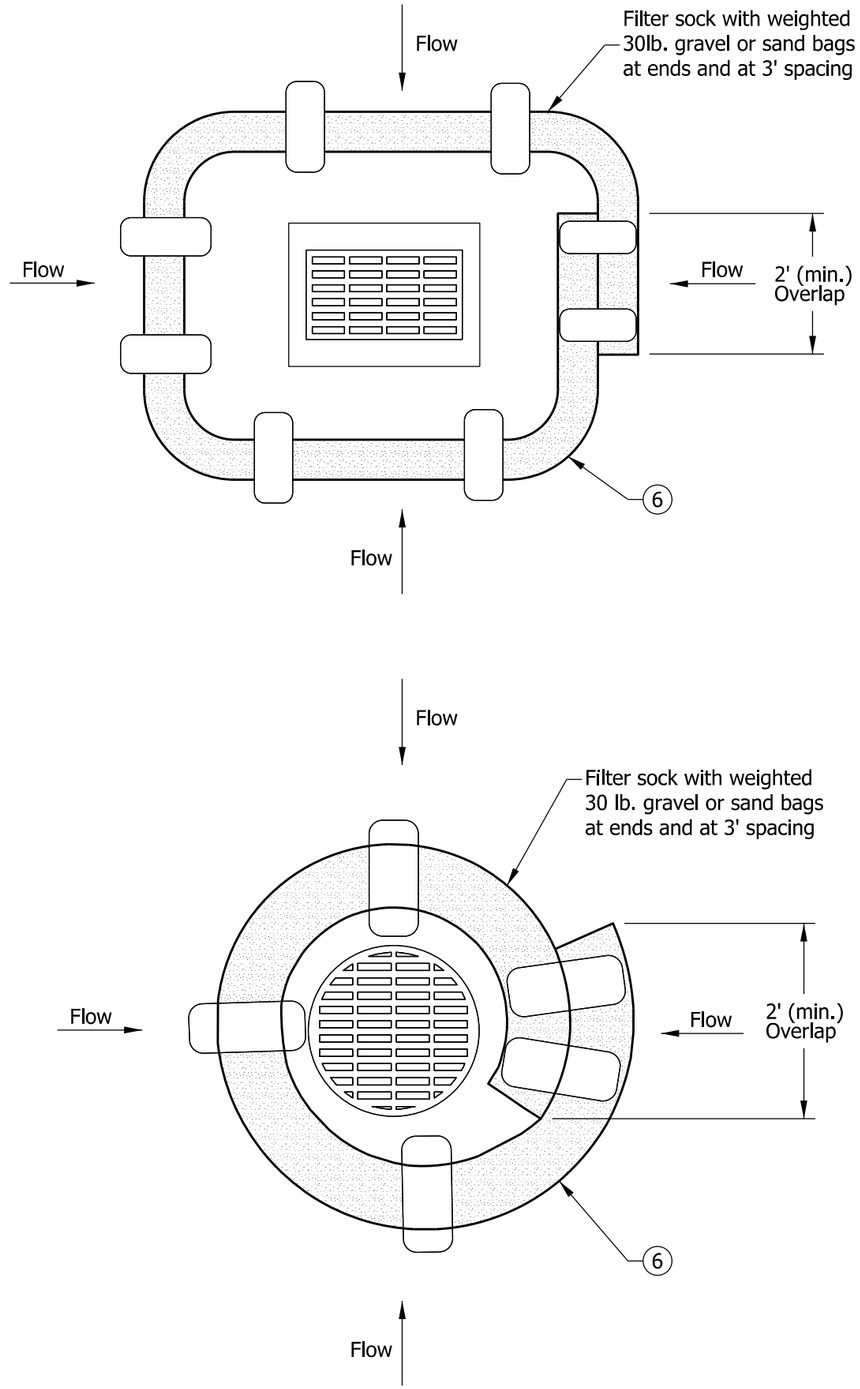
PAVEMENT APPLICATIONS



NOTES:

1. Fiber roll may be substituted for filter sock.
2. Filter sock shall be secured to prevent movement and undercutting as shown or in accordance with the manufacturer's instructions. See Standard Drawing E 205-TECD-10 for securing methods.
3. Inlet protection shall be inspected, at a minimum once every seven days and after each storm event. Sediment shall be removed when 1/3 of the filter sock depth has been filled or as directed.
4. Sediment and gravel deposited on roadways shall be removed once identified after each storm event.
5. Inlet protection shall be removed after the surrounding area becomes stable.
6. Inlet protection shall be used within a lane or shoulder only when closed to traffic. Inlet protection shall not cause water to encroach upon a lane open to traffic.

JOINT DETAIL 7

NOTES:

1. Fiber roll may be substituted for filter sock.
2. Filter sock shall be installed as shown or in accordance with manufacturer's recommendations.
3. Filter sock diameter shall be as required by design based on watershed area.

(4) Filter sock shall be placed perpendicular to the flow of water.

5. Filter sock shall be secured as shown or in accordance with the manufacturer's instructions.

(6) Filter sock does not require staking when fill slope is less than or equal to 12%, except when fill slope is below the Q_{100} water surface elevation and flood prone area.

(7) Filter socks shall be secured in locations below the Q_{100} water surface elevation and flood prone location. Filter sock end shall be secured using the stake through method. Intermediate points may be secured using either the stake through or slanted stake method.

(8) Stake angle and length shall be sufficient to wedge filter sock to the ground to prevent movement and undercutting.

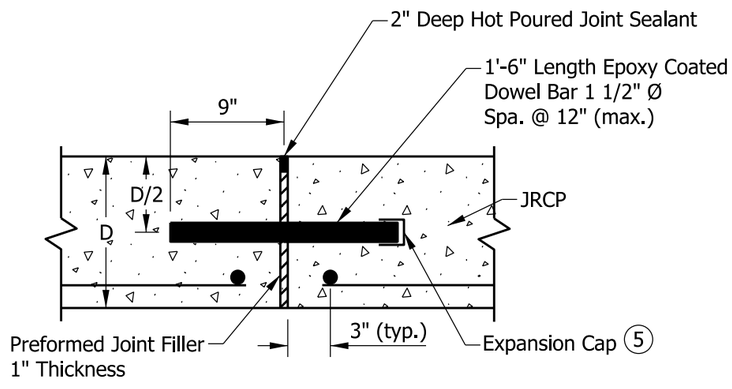
TYPE PCF BRIDGE EXPANSION JOINT DETAIL



EXPANSION JOINT WITH LOAD TRANSFER DETAIL

NOTES:

(1) The joint opening width shall be 2.5 in. for expansion lengths of 150 ft or less, regardless of the joint setting temperature. For expansion lengths greater than 150 ft, the joint opening width shall be constructed based on the actual ambient temperature at the time of construction with the manufacturer's joint setting table. The expansion length shall be as shown on the plans.

(2) The Type PCF Bridge Expansion Joint shall be able to accomodate both the minimum and maximum joint opening widths as shown below.

- Expansion length 250 ft or less
  W(min.)=1.3 in.
  W(max.)=3.7 in.

- Expansion length greater than 250 ft and less than 400 ft.
  W(min.)=1.0 in.
  W(max.)=4.0 in.

(3) See Standard Drawing series E 503-CCPJ for type D-1 contraction joint details.

(4) See Standard Drawing series E 503-CCPJ for transverse construction joint details.

(5) Expansion cap shall be placed with an air gap of 1/4 in. min. between end of dowel bar and end of cap. Expansion caps shall be placed on alternating end of the dowel bar.

(6) Tining or grooving of the concrete shall be terminated 6 in. in advance of the joint opening.

(7) Jointed Reinforced Concrete Pavement (JRCP) thickness shall match the thickness of Reinforced Concrete Bridge Approach (RCBA).

8. Underdrains shall be constructed when shown on the plans.

PLAN
(PCCP Shoulders without Longitudinal Joint)

NOTES:

1. The portion of the sawcut that extends into an adjacent lane or shoulder that will remain in place shall be cleaned and sealed with hot-poured joint sealant. Epoxy may be substituted for hot-poured joint sealant, as approved.

(2) Extend transverse sawcut into adjacent PCCP lane or shoulder a maximum 12 in. or as approved to complete a full-depth cut.

(3) Extend longitudinal sawcut beyond the patch a maximum 12 in. or as approved to complete a full depth cut.

4. D-1 Contraction Joint placement and Retrofit Transverse Joint details not shown for clarity.

5. The length of the sawcut extension shall not alter the approved maintenance of traffic configuration.

(6) Where a longitudinal joint is not present between the existing lane and PCCP shoulder, the sawcut and removal shall include the full width of the shoulder.

PLAN

(EXISTING D-1 CONTRACTION JOINT REMOVED)

PLAN

NOTES:

1. Minimum and maximum patch lengths based on existing D-1 Contraction Joint spacing and minimum 4 ft distance to Retrofit Transverse Joint.
2. For patch lengths 6 ft or greater and less than 20 ft, tie bars shall not be placed at longitudinal joints.
3. Where the distance from an existing D-1 Contraction Joint to the end of the patch is less than 4 ft, the patch length shall be extended until the minimum distance is satisfied. Where extending the patch results in a patch length greater than 20 ft, use detail on Standard Drawing E 506-CCPP-06.
4. See Standard Drawing E 506-CCPP-04 for transverse tie bar spacing.
5. Where the patch length is 12 ft or less and the existing D-1 Contraction Joint has not been removed, a D-1 Contraction shall not be placed.

(6) Where the patch length is between 8 ft and 20 ft and the existing D-1 Contraction Joint has been removed, a D-1 Contraction Joint shall be placed as shown.

(Final Configuration)

NOTES:

(1) Joint shall be reestablished by either preformed joint filler or saw cut option with tooling.

(2) Repairs that involve both sides of the joint shall have at least 3 1/2 in. of milling width on both sides of the joint. The overall milling width shall be at least 10 in.

(3) Repairs that only involve one side of the joint shall have at least 10 in. of milling width, as measured from the joint, and shall not disturb the concrete in the adjacent slab.

(4) Sides of repair shall be tapered 30° - 60° from vertical.

(5) Full depth patching shall be used where the width of unsound concrete at the depth of the tie-bar exceeds 5 in.

(6) 2 in. minimum milling shown, additional hand chipping may be required to remove unsound concrete.

7. Existing tie-bars exposed after removal shall be removed to the face of existing concrete. For tie-bar tolerance, see Standard Drawing Series E 503-CCPJ.

8. Any voids resulting from hand chipping that extend below the tie-bars may be filled with repair concrete. Removal of the unsound concrete below the elevation of the tie-bars is not intended.

9. Repairs shall be terminated 12 in. or more from a transverse joint.

(10) Preformed Joint Filller initially installed to top of repair. A portion shall be sawed out to create reservoir for hot pour sealant.

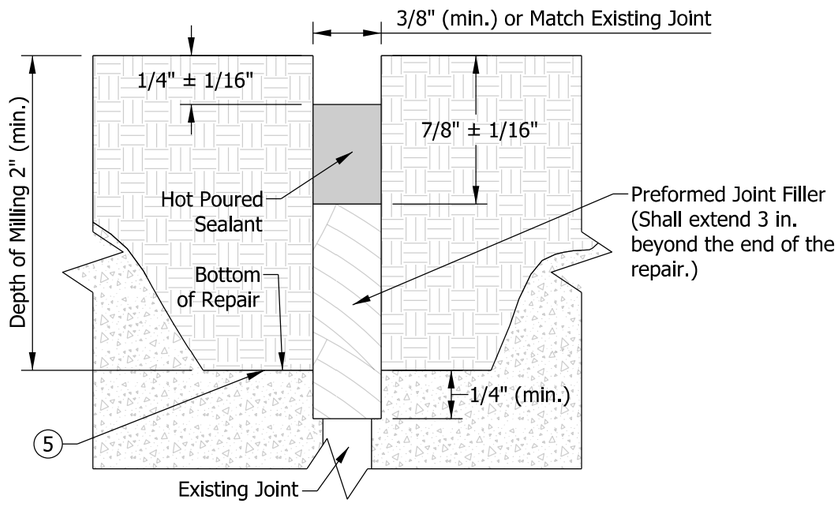
REMOVAL DETAIL WITH EXPOSED DOWEL BAR STRADDLING JOINT



JOINT REPAIR DETAILS
(showing repair straddling joint)

NOTES:

1. Joints shall be reestablished by installing 3/8 in. preformed joint filler prior to concrete placement.
2. Repairs that involve both sides of the joint shall have at least 3 1/2 in. of milling width on both sides of the joint. The overall milling width shall be at least 10 in.
3. Sides of repair shall be tapered 30° - 60° from vertical.
4. Full depth patching shall be used where the width of unsound concrete at the depth of the tie-bar exceeds 2 in.
5. 2 in. minimum milling shown, additional hand chipping may be required to remove unsound concrete.
6. Existing dowel bars exposed after removal that are either misaligned or severely corroded shall be removed to the face of existing concrete. For dowel bar tolerance, see Standard Drawing Series E 503-CCPJ.
7. Exposed areas of dowel bars shall be covered with duct tape as a bond breaker.
8. Any voids resulting from hand chipping that extend below the elevation of the top of the dowel bars shall be filled with dry clean sand. Removal of the unsound concrete below the elevation of the top of the dowel bars is not intended.
9. Joint repairs shall not terminate within a wheel path. Where existing deterioration exists within a wheel path, the limits of the repair should extend to the edge or center of the lane.

GENERAL NOTES

1. This drawing shall be used in conjunction with Standard Drawings E 601-CWGS-01 through -06, and E 601-CWGT-01 and -02 where a curved W-beam guardrail system is specified.

2. The type of curved W-beam guardrail system to be used shall be as shown on the plans in accordance with Table CWGS-3.

3. Except where otherwise shown, all hardware and installation shall be the same as for the guardrail specified for the adjacent run.

4. A curved W-beam guardrail terminal system shall be used to terminate a run of guardrail only at a driveway. For a public road approach, a curved W-beam guardrail connector system shall be used.

5. A maximum of two guardrail panels may be omitted from the curved W-beam guardrail terminal system only where the bridge railing falls outside of the clear zone and the plans specifically state that panels are to be omitted. See Table CWGS-03 for the number of guardrail panels to be removed for each type of curved W-beam guardrail system.

〈6〉 For the 8'-6" radius curved W-beam guardrail terminal system, guardrail shall not be bolted to this post.

〈7〉 The embankment slope behind the curved W-beam guardrail system shall be 2:1 or flatter.

〈8〉 A minimum 4 ft width shoulder shall be used with a 15 ft minimum drive radius.

〈9〉 This dimension shall be 5 ft for the 35 ft radius curved W-beam guardrail connector system.

GENERAL NOTES

1. This sheet shall be used in conjuction with Standard Drawings E 601-CWGS-01, 02, 03, and 06.
2. An alternate single piece having a similar dimensional shape to the terminal end buffer and mating with the W-beam guardrail may be used.
3. The W-beam terminal connector shall be steel of 0.138 inch thickness (10 gauge).
4. If the W-beam terminal connector is lapped on the outside of the guardrail, a galvanized 1" I.D. 2" O.D., 0.134" thick, narrow plain washer shall be placed under the splice bolt heads.
5. Attach the W-beam to the steel pipe with a $\frac{5}{8}$" diameter x $1\frac{1}{4}$" length button head bolt with no washer. No connection to the post is required.
6. Nuts for the anchor cable assembly shall be hand tightened, plus one complete turn at the anchor plate end. All other nuts shall be torqured to 50 ft.-lbs.

NOTES:

1. The pad and grading details shown on these drawings shall be used as applicable to the attenuator system required for either or both ends of the obstruction.

2. Contractor shall follow manufacturer's recommendations for actual pad size for a particular impact attenuator system.

(3) Align the centerline of attenuator system parallel to centerline of the roadway. A maximum angle of 5°, as measured between the longitudinal centerline of the roadway and an impact attenuator system type ED is allowed for the gravel barrel array. See Standard Drawing E 601-IAED-01 for gravel barrel layout and pad size.

4. Variation in transverse slope over the length of the pad shall not exceed 2%.

5. Attenuator system including pad shall not encroach on usable shoulder of the roadway.

(6) Longitudinal downward slope shall be 20:1 maximum.

(7) Longitudinal transition slope shall be a maximum of 10:1 downward.

(8) For a concrete pad adjacent to the outside shoulder area, a distance of 3'-3 beyond the far edge of concrete pad from the travel lane shall be sloped 20:1 before gradual transition to existing slope.

(9) Transition from full height barrier curb to mountable curb shall be provided where barrier curb exists or is planned.

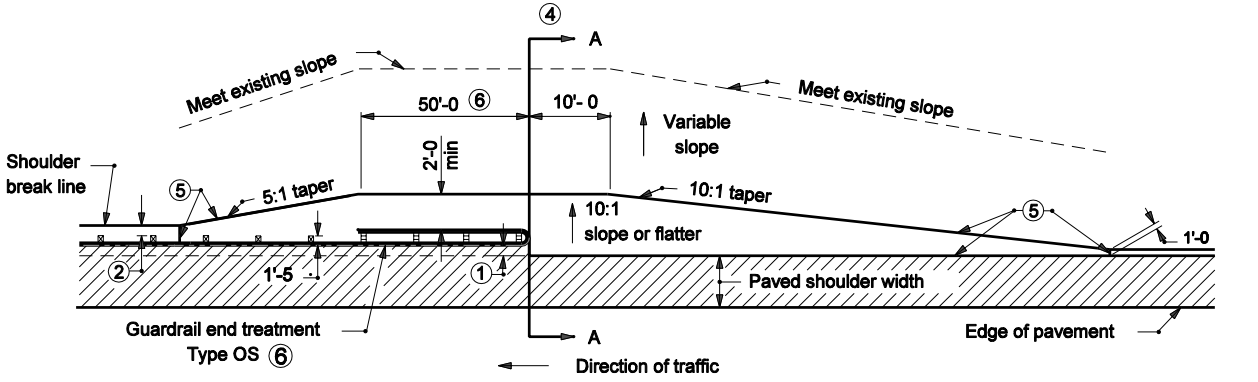
GRADING DETAIL FOR GUARDRAIL END TREATMENT TYPE I



PLAN VIEW

GRADING DETAIL FOR GUARDRAIL END TREATMENT TYPE OS

NOTES:

① The required guardrail offset shall be 0 to 2'-0" desirable as specified in The plans. The offset used between the the edge of required shoulder and the face of rail shall also be used to establish the berm width at the end of the guardrail end treatment.

② This distance may vary from 0 to 2'-0" desirable.

③ These dimensions are based on a 2'-0" guardrail offset and must be adjusted for other offset distances to maintain a 10:1 taper.

④ Grading profiles at Section A-A for types OS and type I guardrail end treatments are shown on Standard Drawings E 601-GRET-08, and -09.

⑤ Limits of compacted aggregate.

⑥ Length and width of OS Unit Test Level 3 (TL-3)
Length = 50'-0"
Width = 2'-0"

NOTES:

1. Grading cross section Option 1 is most desirable and shall be used on new construction. Option 7 is least desirable. The grading cross section to be used shall be as detailed or specified on the plans. A more desirable option may be used in lieu of the option specified.

② The backslope on Option 3 shall not exceed 2:1 on 3R projects.

③ Benching required for existing slopes steeper than 4:1.

④ See plan views on Standard Drawing E 601-GRET-06.

⑤ Plow or deeply scarify for existing slopes 4:1 or flatter.

6. Section A-A Options 1, 2, and 3 may be used with guardrail end treatment type I or OS.

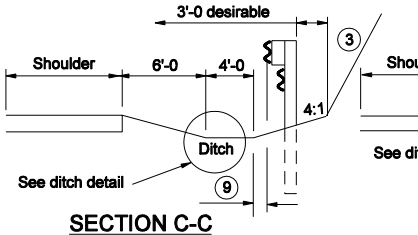
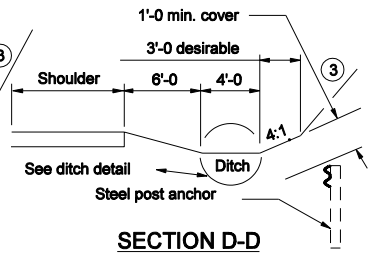
SECTION B-B
(WITH RUBRAIL)



SECTION C-C
(WITH RUBRAIL)



SECTION D-D

NOTES:

1. All posts are 8 ft in length from where the guardrail flares away from the shoulder back to the post anchor. Posts for the post anchor are 6 ft long.
2. (2) Guardrail height may be tapered down in elevation to maintain 3'-9 maximum.
3. (3) A 4:1 or flatter slope is desirable. However, a steeper or flatter existing slope may be used.
4. (4) Variable ditch offsets may be used to fit field conditions.
5. (5) See Standard Drawing E 601-GRET-11 for rub rail anchor details and post anchor details.
6. (6) See Standard Drawing E 601-WBGA-06 for steel post and wood block details.
7. Ditch cross section profile should be same as upstream ditch cross section profile and have same or greater hydraulic capacity.
8. (8) See Standard Drawing E 601-WBGA-06 for detail.
9. (9) Posts shall be installed offset from the required ditch cross section to maintain ditch's hydraulic capacity.

NOTES:

1. A minimum length of MGS w-beam guardrail shall be installed on the approach and departure ends of the outermost CRT posts. This length may include the length of a guardrail end treatment, cable terminal anchor, or transition.

2. A minimum of 62 ft 6 in. of tangent MGS w-beam guardrail shall be installed between the outermost CRT post and the beginning of any flared guardrail section.

3. An MGS w-beam guardrail run containing MGS Long-Span shall not be installed adjacent to curb.

4. See Standard Drawing E 601-MGSA-06 for one omitted post, span length 12 ft 6 in.

SECTION A-E

NOTES:

1. A top-mounted post shall not be installed on an arch-topped or true-arch structure.
2. Top-mounted post shall be spaced in accordance with standard MGS w-beam guardrail post spacing. See Standard Drawing E 601-MGSA-05.
3. The anchor bolt shall be 7/8 in. dia. rod, cut off to 8 1/2 in. length, with washer and nut, galvanized. The minimum embedment shall be 6 in. The anchor bolt shall be installed using Hilti RE500 Epoxy Anchoring System.
4. The center of the anchor bolt shall be installed a minimum of 4 in. from the outer structure edge.
5. The top of the post may be field cut to adjust the length. Where the post is field cut, drill holes at appropriate locations. All cut and hole surfaces shall receive a galvanized coating.
6. The post shall not be encased with asphalt, concrete, or riprap.

MGS GUARDRAIL TRANSITION

NOTES:

1. Optional 4 in. sloping curb only. See Standard Drawing E 605-CCCG-01 or 605-CCIN-01. Where curb is present it shall extend the length of the transition to post 17. The face of curb shall not project beyond the face of w-beam or thrie-beam guardrail.
2. Where curb is not present, a single w-beam section may be installed instead of a nested section. See Standard Drawing E 601-MGSA-12 for guardrail transition without curb.
3. Guardrail mounting height at bridge railing transition shall be 2 ft 7 3/4 in. Adjust guardrail mounting height down to 2 ft 7 in.
4. A minimum of 12 ft 6 in. of tangent MGS w-beam guardrail shall be installed beyond the MGS guardrail transition limits and the beginning of any flared guardrail section.
5. See Standard Drawing E 601-MGSA-13 for lap detail.
6. See Standard Drawing Series E 601-TBGC for Thrie-Beam Guardrail Components.
7. See Standard Drawing E 601-MGSA-14 through -15 for post and blockout details and section views.
8. See Standard Drawing E 706-CBRT-04 for bridge railing attachment details.

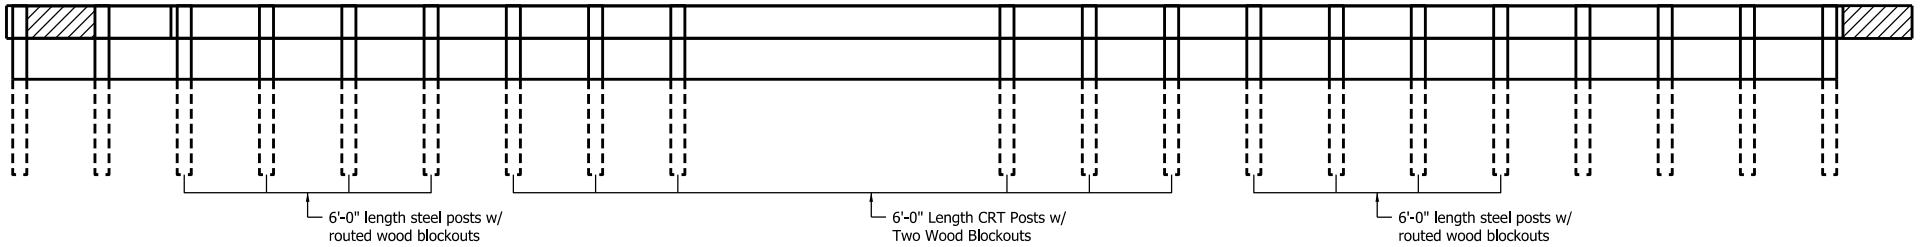
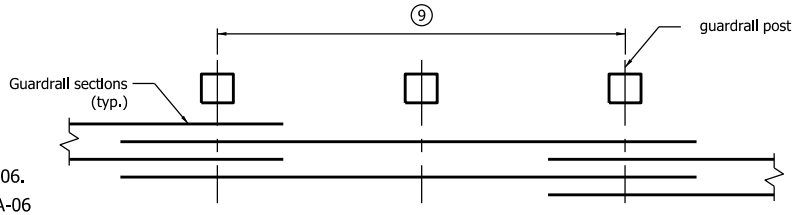
PLAN



ELEVATION



LAP DETAIL FOR NESTED W-BEAM RAILING SECTION

NOTES:

(2) For two-lane two-way operation, use GRET type OS. For structure width > 24'-3", provide three additional spans of standard W-beam guardrail at 6'-3" each before attaching the GRET.

(3) For multi-lane divided operation, use cable terminal, anchor, See Standard Drawing E 601-GCTA-01 through E 601-GCTA-06.

4. See Standard Drawings E 601-GRET-10, 11 and E 601-WBGA-06 for GRET Type II details.

5. See Standard Drawings E 601-NWGA-02, 03 and 04 for post and block assemblies details.

(6) Maximum structure width shall be 24'-3" out to out of structure(s) parallel to road centerline for skewed or perpendicular structure. In this case posts are not located over portion of structure.

(7) Maximum structure width shall be 61'-0" out to out of structure(s) parallel to roadway centerline for skewed or perpendicular structure. Modified posts (5 through 10) over the structure where required, see Standard Drawing E 601-NWGA-03. The remaining wood posts shall be shown on Standard Drawing E 601-NWGA-02.

NOTES:

(8) Post shall clear outer structure side by 4" min.

(9) This dimension is 25'-0" between posts 7 and 8. The dimension is 12'-6" or 25'-0" elsewhere.

10. For grading requirements see Standard Drawings E 601-GRET-06 through 09 and E 601-GRET-12.

MULTI-LANE DIVIDED ROADWAY GUARDRAIL LAYOUT

NOTES:

1. This configuration shall be used where MGS W-beam guardrail at 3 ft - 1 1/2 in. post spacing is specified on a divided lane roadway to shield an isolated or extended obstruction.
2. Dimensions and details not shown on this drawing shall be as shown on the plans.

(3) Posts at 3 ft - 1 1/2 in. spacing shall not be included in the length of the guardrail end treatment.

4. See Standard Drawing Series E 601-MGSA for MGS cable terminal anchor system details.
5. See Standard Drawing Series E 601-MGSA for MGS W-beam guardrail details.

SECTION B-B

SIDE VIEW OF PRECAST SECTION

(*) Precast concrete barrier shall have threaded inserts cast into the top of each section, a minimum of ¼" below the surface, and embeded to a depth sufficient for safe lifting of the section.
Lifting slots will be permitted in addition to the inserts. The dimensions and locations of these slots may be adjusted to accomodate variations in handling equipment.

GENERAL NOTES :

1. See Standard Drawing E 602-CCMB-02 for joint details.
2. Cast-in-place or slip-formed concrete barrier shall have a joint type A at 10 ft from each end of a median bridge pier or bent. The maximum spacing between type A joints shall be 400 ft. Type A joint shall be placed at the end of each work period pour.
3. Each inlet type H includes two inlet boxes, the connector pipe between the inlet boxes, and two type 5 castings.
4. Type B joint shall be located and spaced as shown.
5. See Standard Drawings E 720-ICCA-01 to E 720-ICCA-03 for casting type 5 details.
6. Concrete shoulder or pavement between type 5 casting and concrete barrier wall.
7. See Standard Drawing E 720-INST-05B for information regarding inlet indicators.

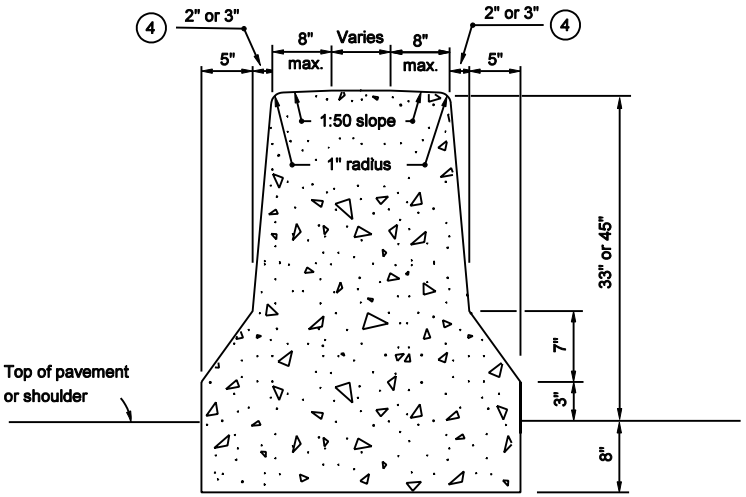
PLAN VIEW AT
INTEGRAL MEDIAN FOUNDATION OR BRIDGE BENT



SECTION A-A

NOTES :

1. All integral median foundations shall be constructed as shown.
2. At a bridge pier, the faces of the concrete barrier shall be transitioned at a 30:1 taper to match configuration of the pier stem. At a median bridge bent, the faces of the concrete barrier shall be transitioned at a 30:1 taper to match the configuration of the crash wall. If the height of the crash wall is less than the height of the concrete barrier, the height of the crash wall shall be increased, as detailed elsewhere on the plans, to match the height of the concrete barrier.
3. An appropriate type of impact attenuator shall be designated for the ends of the concrete barrier, when it is exposed to traffic within the roadway clear zone.

(4) Use 2" for 33" height concrete barrier wall and 3" for 45" height concrete barrier wall.

GENERAL NOTES

1. This installation to be made only where directed. Barbed wire will not be required at points where such installation would cause the collecting of drift in the channel.
2. Line posts of 9'-6 or longer for crossing shall be 2" nominal tubing or 3 x 3 x 1/4 angles and shall be set in concrete footings.
3. Extra length posts to be used as directed.

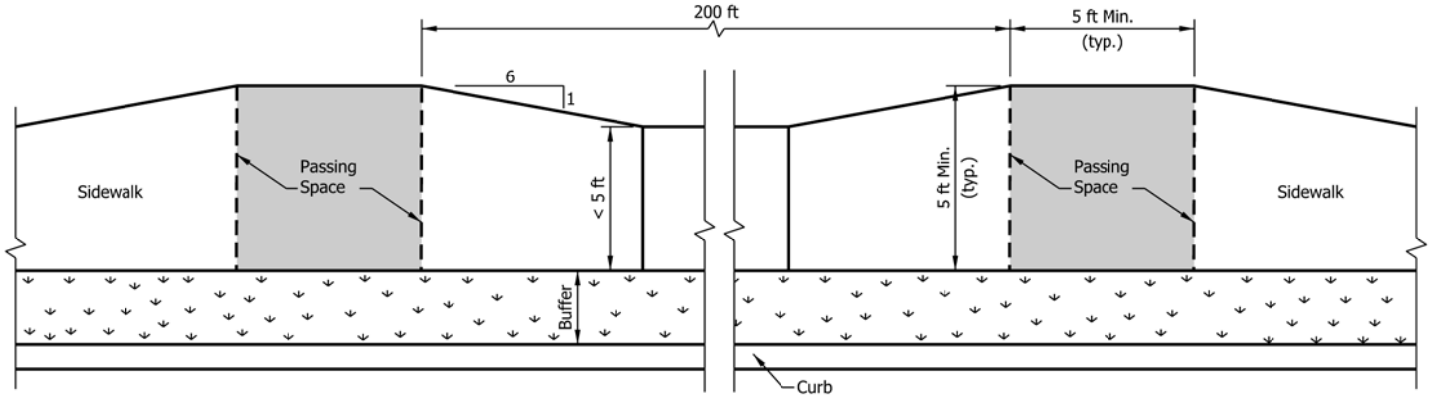
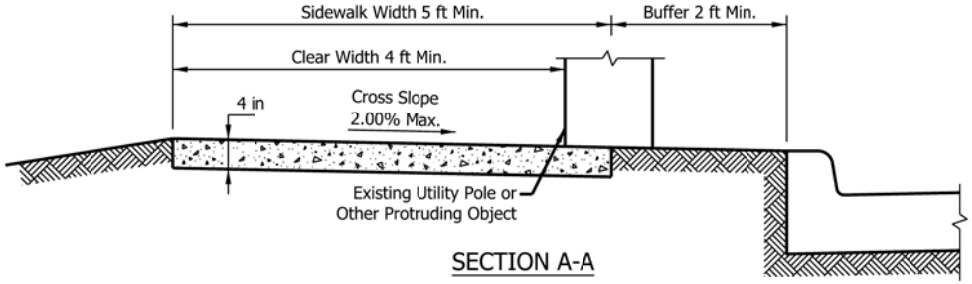
SIDEWALK PLAN



PASSING SPACE



SECTION A-A

NOTES:

1. All slopes are absolute rather than relative to the sidewalk or roadway grade. Slopes at least 0.50% less than the maximum are preferred.
2. The grade of the sidewalk is measured in the direction of pedestrian travel. The grade of the sidewalk shall not exceed the grade of the adjacent roadway. The cross slope is measured perpendicular to the direction of pedestrian travel. The cross slope of the sidewalk shall not exceed 2.00%.

(3) Where there is a buffer between the sidewalk and curb, the preferred minimum sidewalk clear width is 5 ft.

(4) A 4-ft minimum clear width shall be provided adjacent to street furniture, mailbox, utility pole, or other protruding object. Where the sidewalk clear width is less than 5 ft, a passing space shall be provided at 200 ft intervals. The passing space minimum clear dimension shall be 5 ft x 5 ft.

(5) See Standard Drawing E 604-CCSJ-01 for sidewalk expansion joint details.

(6) See Standard Drawing E 604-SDWK-03 for sidewalk driveway crossing configurations.

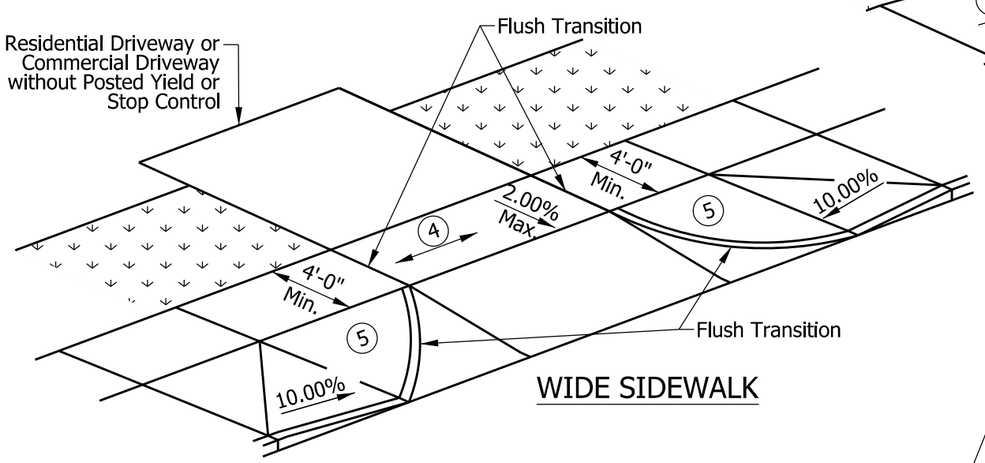
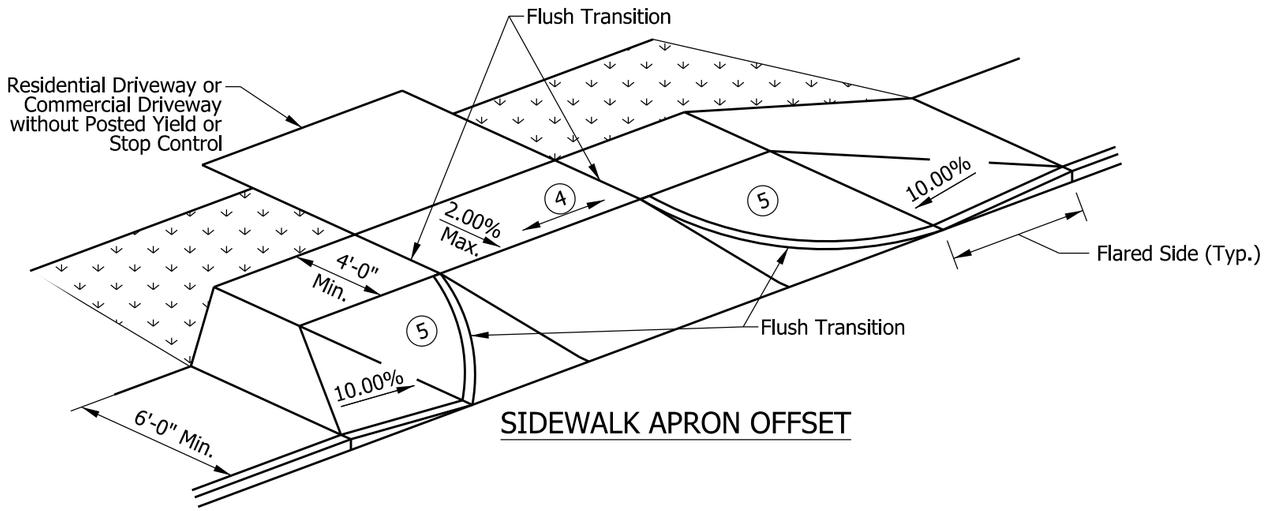
SIDEWALK TRANSITION



WIDE SIDEWALK



SIDEWALK APRON OFFSET

NOTES:

1. All slopes are absolute rather than relative to the sidewalk or roadway grade. Slopes at least 0.50% less than the maximum are preferred.

2. A sidewalk driveway crossing shall only be used on a sidewalk at a residential driveway or a commercial driveway without posted yield or stop control. A curb ramp shall be used at all other crossings. See Standard Drawing Series E 604-SWCR for curb ramp details.

(3) Where a sidewalk transition is used to lower or raise the sidewalk to connect with a residential driveway or commercial driveway without posted yield or stop control, the running slope of the transition shall be 8.33% maximum.

(4) The grade of the sidewalk across the driveway shall not exceed the grade of the adjacent roadway.

(5) The area between the driveway and a flared side or sidewalk transition shall match the driveway profile and transverse slope.

6. A turning space is not required at the top of a sidewalk transition.

(7) Objects such as a utility cover, vault frame, and grating shall be placed outside a sidewalk transition.

8. A detectable warning surface shall not be placed at the crossings of a residential driveway. A detectable warning surface may be placed at the crossing of a commercial driveway without yield or stop control.

9. See Standard Drawing E 604-SDWK-01 and -02 for Sidewalk Details.

10. See Standard Drawing Series E 610-DRIV for drives.

10	Blended Transition Curb Ramp Component Details
11	Median Cut-Through and Median Perpendicular Curb Ramp Typical Placement
12-13	Detectable Warning Surface Placement and Configuration
14	Detectable Warning Surface Details

GENERAL NOTES:

1. All slopes are absolute rather than relative to the sidewalk or roadway grade. Slopes at least 0.50% less than the maximum are preferred.

2. Ramp or Blended Transition. A ramp or blended transition shall be used to lower or raise the sidewalk to connect with the street or highway.

3. Turning Space. A turning space shall be provided at the top of a perpendicular ramp, bottom of a parallel ramp, or where the pedestrian travel requires a change in direction. A common turning space may be shared by adjacent ramps. The turning space shall have a minimum clear dimension of 4 ft x 4 ft. Where the turning space is constrained at the back of the sidewalk by a curb, retaining wall, building, or feature over 2 inches in height, the minimum clear dimension shall be 4 ft x 5 ft, with the 5-ft dimension in the direction of the ramp running slope.

4. Flared Side. A flared side shall be used adjacent to a walkable surface. A flared side may be used adjacent to a non-walkable surface. A flared side shall have a maximum slope of 10.00% measured parallel to the back of the curb.

5. Return Curb. A return curb is placed perpendicular to the roadway curb. A return curb may be used adjacent to a non-walkable surface. A return curb shall not be used adjacent to a walkable surface. The return curb may be omitted where the non-walkable surface is flared and the curb adjacent the roadway is tapered to meet the flush curb at the bottom of the ramp.

6. Clear Space. A clear space shall be provided beyond the bottom grade break of a curb ramp wholly contained within the crosswalk and wholly outside the parallel vehicular travel path. The clear space shall have a minimum clear dimension of 4 ft x 4 ft.

7. Detectable Warning Surface. A detectable warning surface shall consist of truncated domes and be placed at each street, highway, or railroad crossing. The detectable warning surface shall extend a minimum of 2 ft in the direction of pedestrian travel and be placed the entire width of a ramp, blended transition, or turning space.

8. Running Slope. The running slope of a ramp, blended transition, or turning space shall be measured parallel to the direction of pedestrian travel.
   a. A running slope of 2.00% or less is considered level.
   b. A ramp shall have a maximum running slope of 8.33% but shall not require a ramp length to exceed 15 ft.
   c. A blended transition shall have a maximum running slope of 5.00%.
   d. A turning space shall have a maximum running slope of 2.00%.

9. Width. Unless otherwise noted, minimum width of a ramp, blended transition, or turning space, excluding flared sides or return curb, shall be 4 ft.

10. Grade Break. A grade break at the top and bottom of a ramp, blended transition, or turning space shall be perpendicular to the running slope. Grade breaks shall not be within the ramp, blended transition, turning space, or detectable warning surface. Grade breaks shall be flush. Vertical discontinuities shall not be greater than 1/2 in. Where a discontinuity is greater than 1/4 in. the surface shall be beveled with a slope not steeper than 1V:2H.

11. Cross Slope Exceptions. The cross slope of a ramp, blended transition, or turning space shall be measured perpendicular to the direction of pedestrian travel.
   a. The maximum cross slope at a pedestrian street crossing without posted yield or stop control shall be 5.00%.
   b. The maximum cross slope at a pedestrian street crossing with posted yield or stop control shall be 2.00%.
   c. The maximum cross slope at a midblock crossing shall be the established grade of the adjacent roadway.

12. Counter Slope. A counter slope is the cross slope of the gutter or street adjacent the running slope of the ramp, blended transition, or turning space. See Standard Drawing E 604-SWCR-14 for counter slope details.

13. Objects such as a utility cover, vault frame, and grating shall be placed outside the curb ramp.

14. Curb ramps shall be placed within the marked crosswalk area.

15. Drainage inlets should be located uphill from a curb ramp to prevent ponding in the path of pedestrian travel.

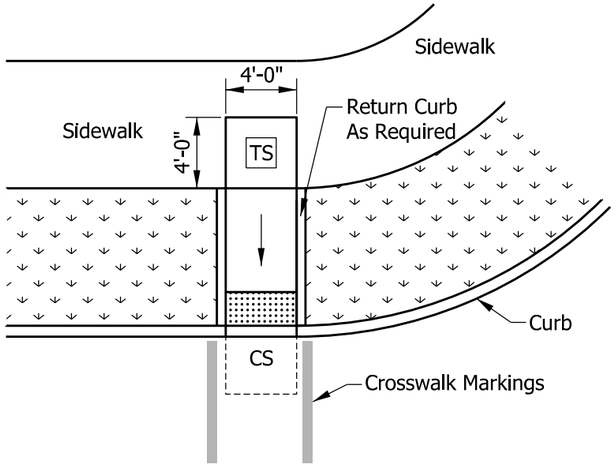
TIERED PERPENDICULAR CURB RAMP



PERPENDICULAR CURB RAMP
ADJACENT NON-WALKABLE SURFACE

NOTES:

1. Where insufficient width between the curb and back of sidewalk prevent a standard perpendicular curb ramp running slope, a sidewalk transition may be used to lower the sidewalk grade. The sidewalk transition running slope shall not exceed 8.33%. See Standard Drawing Series E 604-SDWK for sidewalk details.

2. The turning space shall have a minimum clear dimension of 4 ft x 4 ft and a running slope of 2.00% maximum. Where the turning space is constrained at the back of the sidewalk, the minimum clear dimension shall be 4 ft x 5 ft, with the 5-ft dimension in the direction of the ramp running slope.

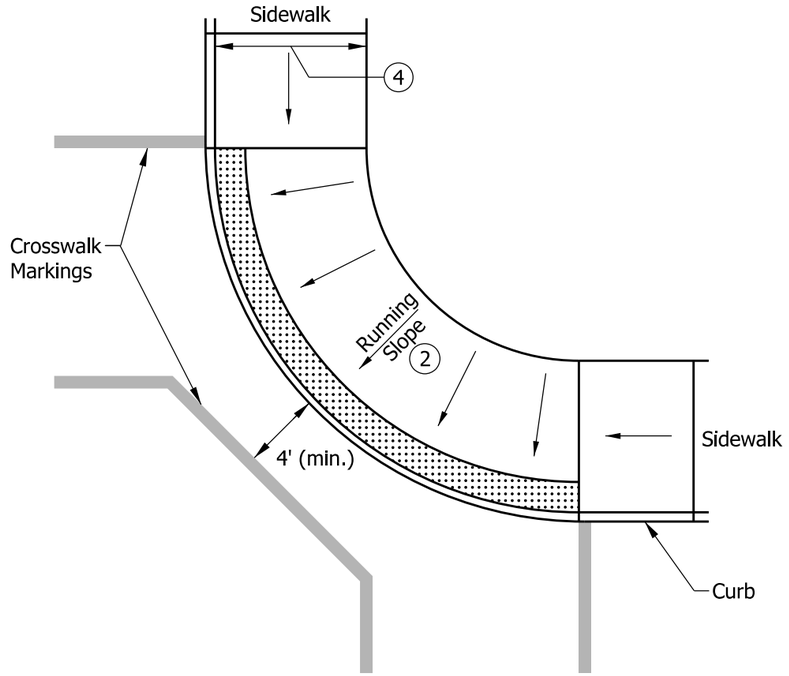
WITH RUNNING SLOPE > 2.00%



BLENDED TRANSITION CURB RAMP
WITH RUNNING SLOPE ≤ 2.00%

NOTES:

(1) Where the running slope is greater than 2.00%, a 4-ft minimum sidewalk shall continue behind the blended transition. The running slope shall not exceed 5.00%.

(2) Where the running slope is less than or equal to 2.00% a 4-ft minimum sidewalk is not required behind the blended transition.

(3) A diagonal curb ramp shall not be used for new construction. For an alteration project, a diagonal curb ramp shall be used only where existing physical conditions prevent paired curb ramps, a blended transition curb ramp, or a depressed corner curb ramp from being provided.

(4) Where there is no buffer between the sidewalk and curb the preferred minimum sidewalk width is 6 ft. Where a buffer is placed between the sidewalk and curb, the preferred minimum sidewalk width is 5 ft. See Standard Drawing Series E 604-SDWK for sidewalk details.

Component Slope Equations:

Blended Transition u_1 = Running Slope $= \frac{|\text{Elev. 2} - \text{Elev. 3}|}{\text{Blended Transition Length}} \leq 2.00\%$ (2)

Blended Transition u_2 = Running Slope $= \frac{|\text{Elev. 5} - \text{Elev. 6}|}{\text{Blended Transition Length}} \leq 2.00\%$ (2)

Blended Transition u_3 = Running Slope $= \frac{|\text{Elev. 8} - \text{Elev. 9}|}{\text{Blended Transition Length}} \leq 2.00\%$ (2)

Blended Transition u_4 = Cross Slope $= \frac{|\text{Elev. 10} - \text{Elev. 11}|}{\text{Blended Transition Width}} \leq 2.00\%$ (4)

Sidewalk u_5 = Cross Slope $= \frac{|\text{Elev. 1} - \text{Elev. 2}|}{\text{Sidewalk Width}} \leq 2.00\%$

Sidewalk u_6 = Cross Slope $= \frac{|\text{Elev. 4} - \text{Elev. 5}|}{\text{Sidewalk Width}} \leq 2.00\%$

Sidewalk u_7 = Cross Slope $= \frac{|\text{Elev. 7} - \text{Elev. 8}|}{\text{Sidewalk Width}} \leq 2.00\%$

NOTES:

1. The bottom edge of the blended transition and top of curb shall be flush with the edge of adjacent pavement and gutter line.
2. Where the running slope is less than or equal to 2.00% a 4-ft minimum sidewalk is not required, behind the blended transition. Where the running slope is greater than 2.00%, a 4-ft minimum sidewalk shall continue behind the blended transition and the running slope shall not exceed 5.00%.
3. Curb ramp surface shall be coarse broomed transverse to the running slope.
4. See Standard Drawing E 604-SWCR-01 for cross slope exceptions.
5. See Standard Drawing E 604-SWCR-12, -13, and -14 for Detectable Warning Surface placement, configuration, and details.
6. See Standard Drawing E 604-CCSJ-01 for sidewalk expansion joint details.

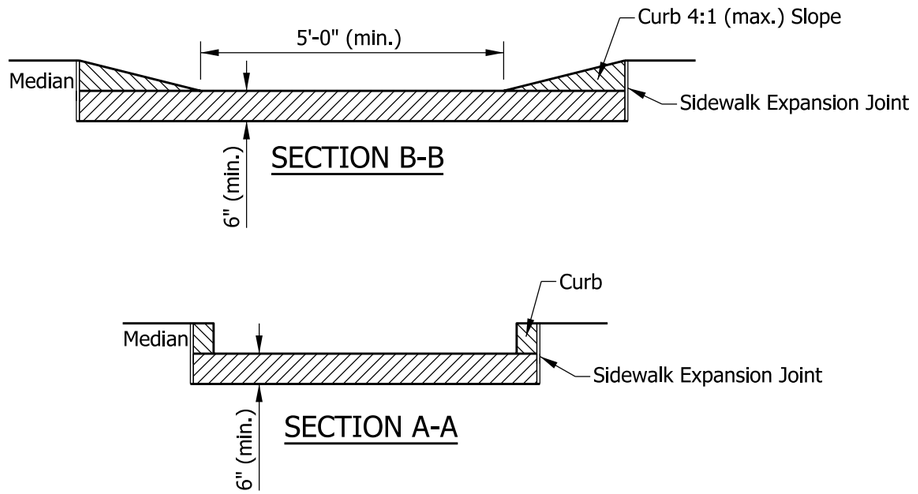
MEDIAN CUT-THROUGH
WITH TAPERED CURB



NOTES:

1. The minimum width of a median cut-through and median perpendicular curb ramp shall be 5 ft.
2. Where in-line or offset perpendicular curb ramps are used within a median, the turning space shall have a minimum clear dimension of 4 ft x 5 ft.
3. Where a median cut through is used the running slope shall be 5.00% maximum.
4. Where median width is less than 6 ft, detectable warning surfaces shall not be placed.
5. The bottom edge of the median cut-through or median perpendicular curb ramp and the top of curb shall be flush with the edge of adjacent pavement gutter line.
6. See Standard Drawing E 604-SWCR-01 for cross slope exceptions.
7. See Standard Drawing E 604-SWCR-12, -13, and -14 for Detectable Warning Surface placement, configuration, and details.
8. See Standard Drawing E 604-CCSJ-01 for sidewalk expansion joint details.

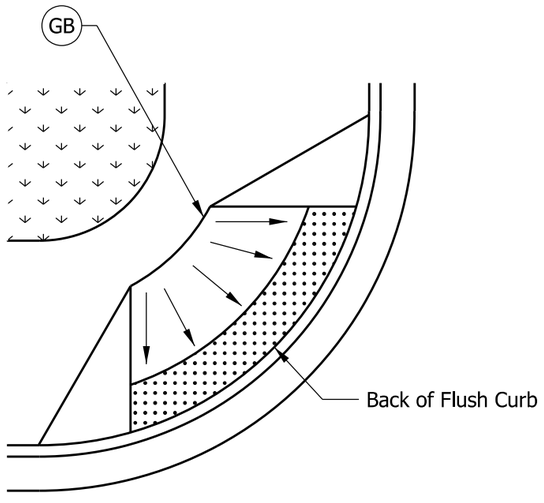
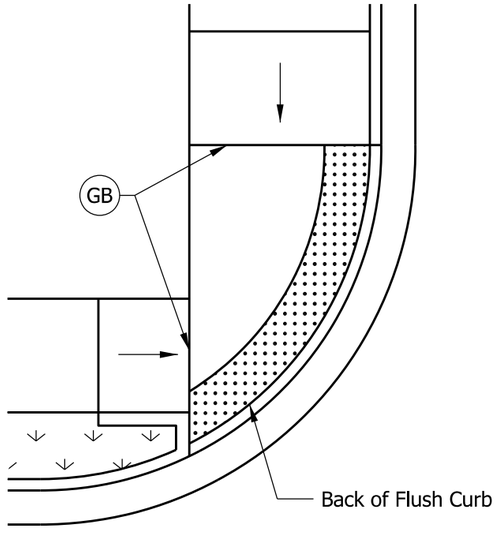
ONE-WAY DIRECTIONAL PERPENDICULAR CURB RAMPS ON A RADIUS (3)



BLENDED TRANSITION CURB RAMP (5)



DEPRESSED CORNER CURB RAMP (5) (7)

NOTES:

1. A detectable warning surface shall be placed at each street, highway, or railroad crossing. See Standard Drawing E 604-SDWK-03 for a detectable warning surface placement at a sidewalk driveway crossing.
2. The detectable warning surface shall extend a minimum of 2 ft in the direction of pedestrian travel and extend the full width as shown. The detectable warning surface shall not be placed across a grade break.

(3) Where the distance from the face of the detectable warning surface is 5 ft or less from the back of curb, the detectable warning surface shall be placed perpendicular to the ramp. Where the distance from the face of the detectable warning surface is more than 5 ft from the back of curb, the detectable warning surface shall be placed at the back of curb as shown or in an alternate placement configuration. See Standard Drawing E 604-SWCR-13 for alternate detectable warning surface placement.

(4) The detectable warning surface on a parallel curb ramp shall be placed on the turning space at the flush transition between the street and turning space at the back of curb.

(5) The detectable warning surface on a blended transition or depressed corner shall be placed at the back of curb as shown or in an alternate placement configuration. See Standard Drawing E 604-SWCR-13 for alternate detectable warning surface placement.

6. See Standard Drawing E 604-SWCR-14 for detectable warning surface details.

NOTES:

1. The detectable warning surface shall extend a minimum length of 2 ft in the direction of pedestrian travel and extend the full width as shown. The detectable warning surface shall not be placed across a grade break. The edges of adjacent panels shall be parallel and tightly abutted.
2. The detectable warning surface on a median cut-through shall be placed at the flush transition between the street and median cut-through. Where a median is less than 6 ft, a detectable warning surface shall not be placed.
3. Where a pedestrian gate is provided at a railroad crossing, the detectable warning surface shall be placed on the side of the gate opposite the railroad crossing.
4. The detectable warning surface shall be outside of the railroad dynamic envelope, 6 ft min. from the centerline of the nearest rail.
5. The edge of the detectable warning surface shall not be within the dynamic envelope and no greater than 15 ft from the centerline of the nearest rail.
6. Where shared-use path intersects a street or highway, the detectable warning surface shall be placed on the shared-use path within 1 ft of the street or highway edge.
7. DWS panel ends shall be placed at the back of curb. The distance between the back of curb and the front face of the detectable warning surface shall not exceed 6 in. between the ends.
8. See Standard Drawing E 604-SWCR-14 for detectable warning surface details.

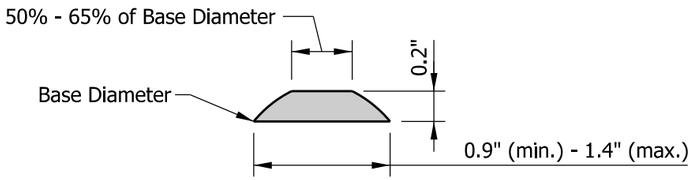
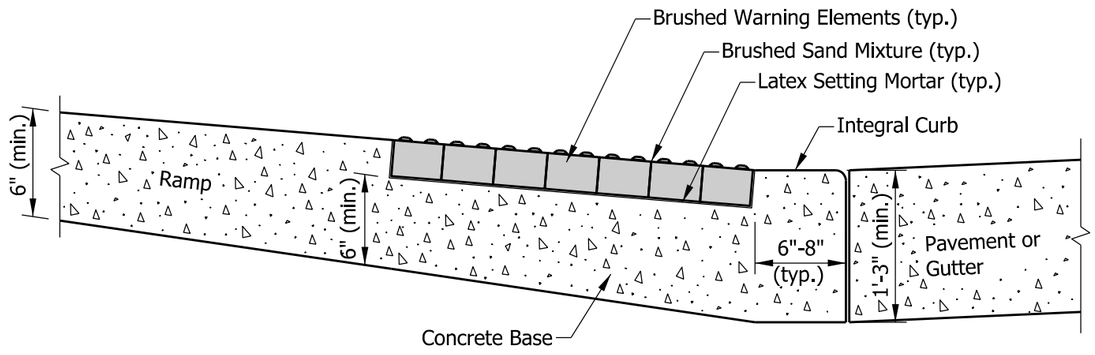
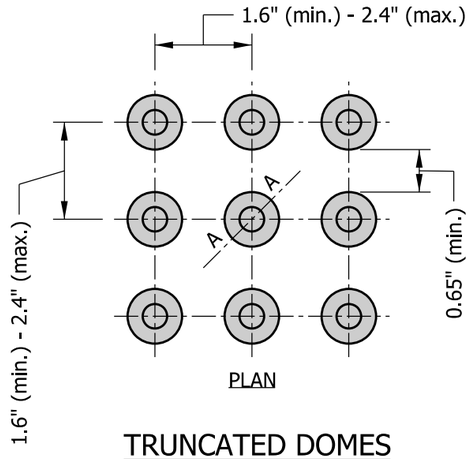
BRICK DETECTABLE WARNING SURFACE WITH CONCRETE BORDER ⑥ ⑦



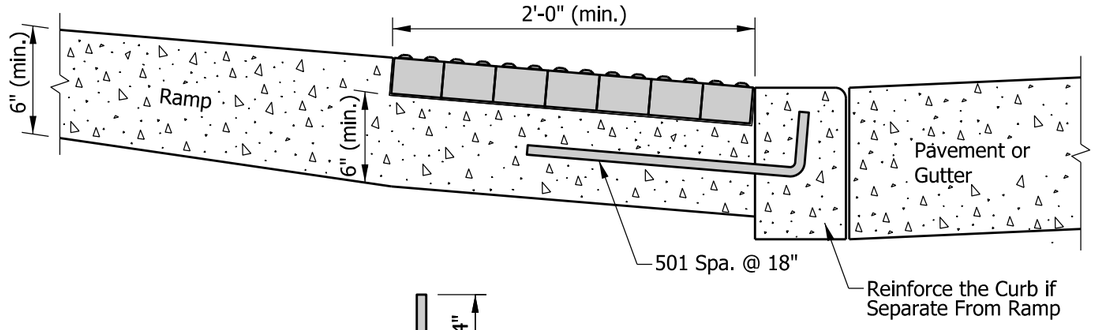
SECTION A-A

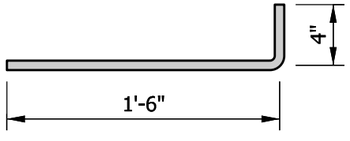


TYPICAL RAMP AND BRICK SURFACE CONSTRUCTION DETAIL



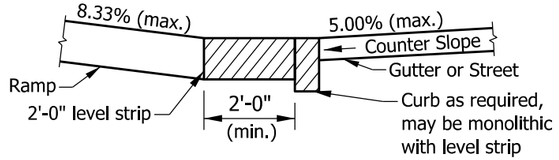
TRUNCATED DOMES





501 x 1'-10"

ALTERNATE CURB CONSTRUCTION



CHANGE OF GRADE > 11% ⑤

NOTES:

1. Detectable warning surface shall consist of truncated domes. Domes shall be aligned in a square or radial grid pattern with diameter and center-to-center spacing within the ranges specified.
2. The detectable warning surface may be field cut. Truncated dome spacing between adjacent panels shall be within the ranges specified.
3. The detectable warning surface shall contrast visually with adjacent surfaces, either light-on-dark or dark-on-light.
4. The detectable warning surface shall extend a minimum of 2 ft in the direction of pedestrian travel and extend the full width as shown. The detectable warning surface shall not be placed across a grade break.
5. The maximum counter slope of the gutter or street at the bottom of the ramp shall be 5.00%. Where the algebraic difference between the running slope and the counter slope exceeds 11%, a 2-ft minimum level strip should be provided at the bottom of the ramp.
6. Where a concrete border is used for forming, the border shall be cast monolithically with the curb ramp concrete. The concrete border shall not reduce the ramp width by more than 2 in. on each side.
7. Where forming other than a concrete border is used, the edge restraint shall not encroach upon the ramp width.

PROFILE

NOTES:

1. Where the paved shoulder width is at least 2 ft, a 12-ft longitudinal gap in the corrugations shall be provided every 60 ft to accommodate bicycles.

(2) If shoulder joint is present, the liquid asphalt sealant width shall be a minimum of 24 in. centered on the shoulder joint line.

3. The corrugations shall be no closer than 6 in. to a casting or a concrete pavement transverse joint.

(4) Near edge of travel lane if shoulder joint is not apparent.

BREAK NEAR A RAILROAD CROSSING

NOTES:

1. Corrugations shall begin or end at the stop bar location.
2. Corrugations shall be continued through driveway access points for minor driveways.
3. Gap shall be 15 ft for a railroad crossing without gates or signals and 25 ft for railroad crossing with gates or signals.
4. For a bridge deck, end corrugations a maximum of 5 ft and a minimum of 6 in. before an approach slab and begin corrugations a minimum of 6 in. and a maximum of 5 ft after the approach slab on the other side of the bridge deck.
5. If there is no right-turn lane and the paved shoulder width is 8 ft or greater the corrugations shall end 400 ft from the point of curvature on approach lane.

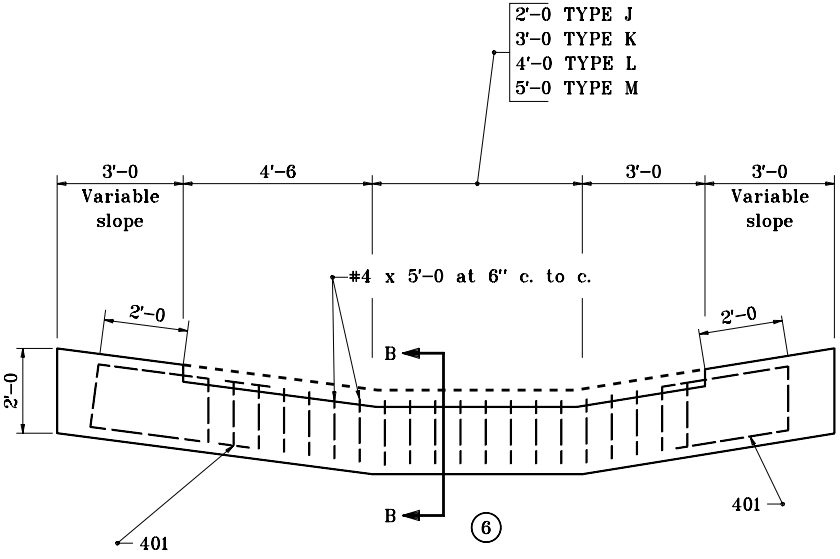
CUT-OFF WALL FOR PAVED SIDE DITCH TYPES J THROUGH M



ELEVATION VIEW
LUG FOR PAVED SIDE DITCH TYPES J THROUGH M

GENERAL NOTES

1. The 6:1 sloped side shall be placed nearest the roadway.

2. Cutt-off walls shall be used at the begining and end of all paved side ditch.

3. Lugs shall be used at the following locations:

   a. 10 ft downslope from a grade change.
   b. 10 ft downslope from the intersection of different types of paved side ditch.
   c. At the downslope end of a transition between different types of paved side ditch.
   d. At the intervals as follows:

Interval	Grade
200 ft	3% to 5%
150 ft	5% to 8%
100 ft	8% to 10%
50 ft	10% & above

4. Paved side ditch transitions shall be required at intersections with earth ditches and pipe culverts. These transitions shall be converted to equivalent lengths of the type of paved side ditch specified at these locations.

5. Transitions of 10 ft or less shall be required between two different types of paved side ditch. Such transitions shall be converted to equivalent lengths of the larger type of paved side ditch specified at these locations.

(6) See Standard Drawing E 607-PSDT-04 for Sections A-A and B-B.

7. See Standard Drawing E 607-PSDT-03 for 401 bending diagram.

15	Private Drive Crossover Plans
16	Private and Commercial Drive Crossover Sections
17	Commercial Drive Crossover Plans
18	Pavement Wedge and Pay Limits for Class II, IV and VII Drives

GENERAL NOTES:

1. When the maximum approach grade of ±10% does not meet the grade of the existing drive before the R/W line, the approach grade of ±10% shall extend beyond the R/W to the point of intersection with the existing driveway grade. Construction beyond the R/W line shall be done in temporary R/W.

2. The appropriate pipe end treatment should be provided for pipes located either inside the clear zone or outside the clear zone.

3. The minimum driveway pavement sections for Class III, IV, VI and VII Drives have been designed for an average annual daily truck traffic (AADTT) 400, Truck Class 4 and above. If the AADTT is greater than 400 per day, the required pavement section shall be as shown elsewhere on the plans.

4. For Class III, IV, VI and VII Drives, if length of the driveway is more than 15 feet, then D-1 contraction joints are required in transverse direction. Spacing shall be 1/2 the length of the driveway or 15 feet maximum.

5. Embankment slopes within the mainline clear zone for new construction/reconstruction projects or within the obstruction-free zone for 3R projects should be as shown in the table on Standard Drawing E 610-PRAP-01. Outside the clear zone or the obstruction-free zone, the embankment slopes should desirably be 4:1 but not steeper than 3:1.

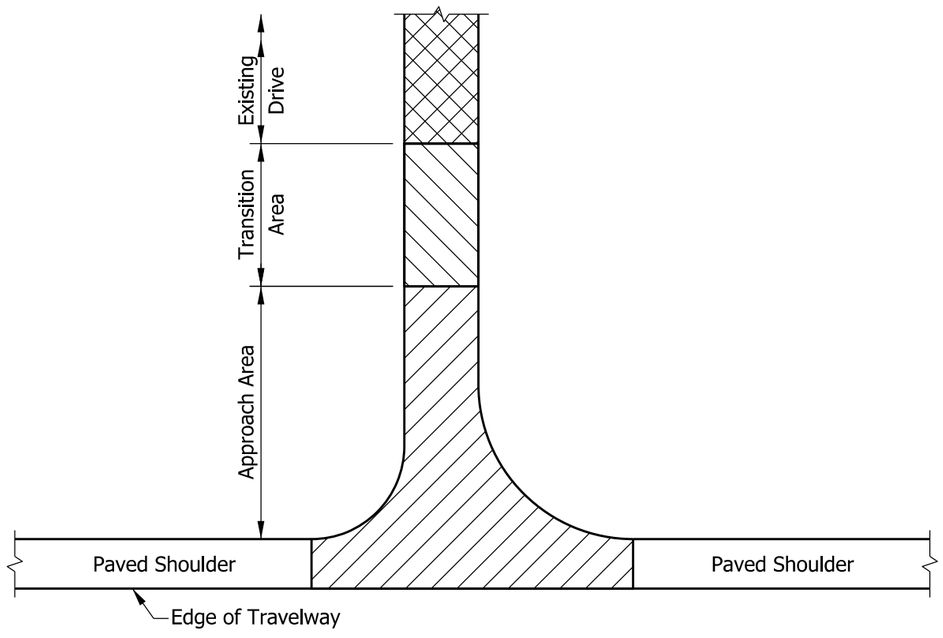
PAVEMENT WEDGE PLAN VIEW



PAY LIMITS FOR CLASS II, IV, AND VI DRIVES

NOTES:

(1) 3 ft or wider as necessary to feather to existing grade.

2. Pavement wedge to be centered on centerline of drive.

3. The pay limits shown herein generally apply to Class II, IV, and VI Drives.

4. Approach Area - HMA for Approaches or PCCP for Approaches. This area typically extends from the edge of an 8 foot or wider paved shoulder to the right of way or property line or within a few feet of the right of way or property line where the new drive meets the grade of the existing drive, depending on the site-specific conditions. Where the paved shoulder width is less than 8 feet, this area will be measured from the edge of travelway.

5. Transition Area - an equivalent pavement section to the existing drive. This area typically extends from the right of way or property line to a point on the property owner's drive where the new drive grade can match the existing drive grade.

INDEX

SHEET NO.	SUBJECT
1	Public Road Approach Index and General Notes
2	Public Road Approach Type A
3	Public Road Approach Type B
4	Public Road Approach Type A & Type B Table of Values
5	Public Road Approach Type C
6	Public Road Approach Type C Table of Values
7	Public Road Approach Type D
8	Public Road Approach Type D Table of Values
9	Public Road Approach Pay Limit Details
10	Street or Alley Approach PCCP or HMA Mainline Pavement
11	Public Road Approach Overlay Paving Transition

GENERAL NOTES:

1. Embankment slopes on either side of an approach or drive within the mainline clear zone for new construction/reconstruction projects or the obstruction free zone on 3R projects should conform to the following table:

DESIGN SPEED		≥ 50 mph		≤ 45 (mph)
Design Year AADT		≥ 6000	< 6000	All
Multi-Lane Divided, All Functional Classes	Incoming Slope	10:1	10:1	10:1
	Outgoing Slope	4:1	4:1	4:1
Multi-Lane Undivided, All Functional Classes	Incoming Slope	10:1	6:1	6:1
	Outgoing Slope	4:1	4:1	4:1
2-Lane Arterial or Collector		6:1	6:1	4:1
2-Lane Local Road		4:1	4:1	4:1

Outside the clear zone or the obstruction free zone, the embankment slopes should desirably be 4:1 but not steeper than 3:1.

2. Cross culverts under the public road approach which cannot be located outside the mainline clear zone will require appropriate end treatments at each end as shown on the plans.

3. If the approach is to be constructed of PCCP, the details shall be as shown elsewhere in the plan for thickness, joint type, and location.

TABLE A

Design Speed (mph)	MINIMUM LENGTH OF RIGHT TURN LANE (excluding taper) , ft							
	Downgrade Slope in %				Upgrade Slope in %			
	6 to 5	4.99 to 4	3.99 to 3	2.99 to 0	0 to 2.99	3 to 3.99	4 to 4.99	5 to 6

NOTES:

1. See Standard Drawing E 610-PRAP-02 for Public Road Approach Type A.
2. See Standard Drawing E 610-PRAP-03 for Public Road Approach Type B.
3. If intersection control angle is less than 70° or greater than 110° a special design will be required.

LEGEND:

α = ANGLE OF TURN
The angle through which a vehicle travels on the public road approach toward making a right hand turn. It is measured from the tangent on which a vehicle approaches the intersecting road to the corresponding tangent on the intersecting road to which the vehicle turns.

β = INTERSECTION CONTROL ANGLE

NOTES:

(1) Match existing shoulder width. Minimum width is 2 ft.

(2) See Standard Drawing E 610-PRAP-01 for Table A.

(3) See Standard Drawing E 610-PRAP-06 for Table of Values.

(4) See Standard Drawing E 610-PRAP-09 for pay limits details.

(5) The pavement section for the auxiliary lane shall be as detailed elsewhere in the plans.

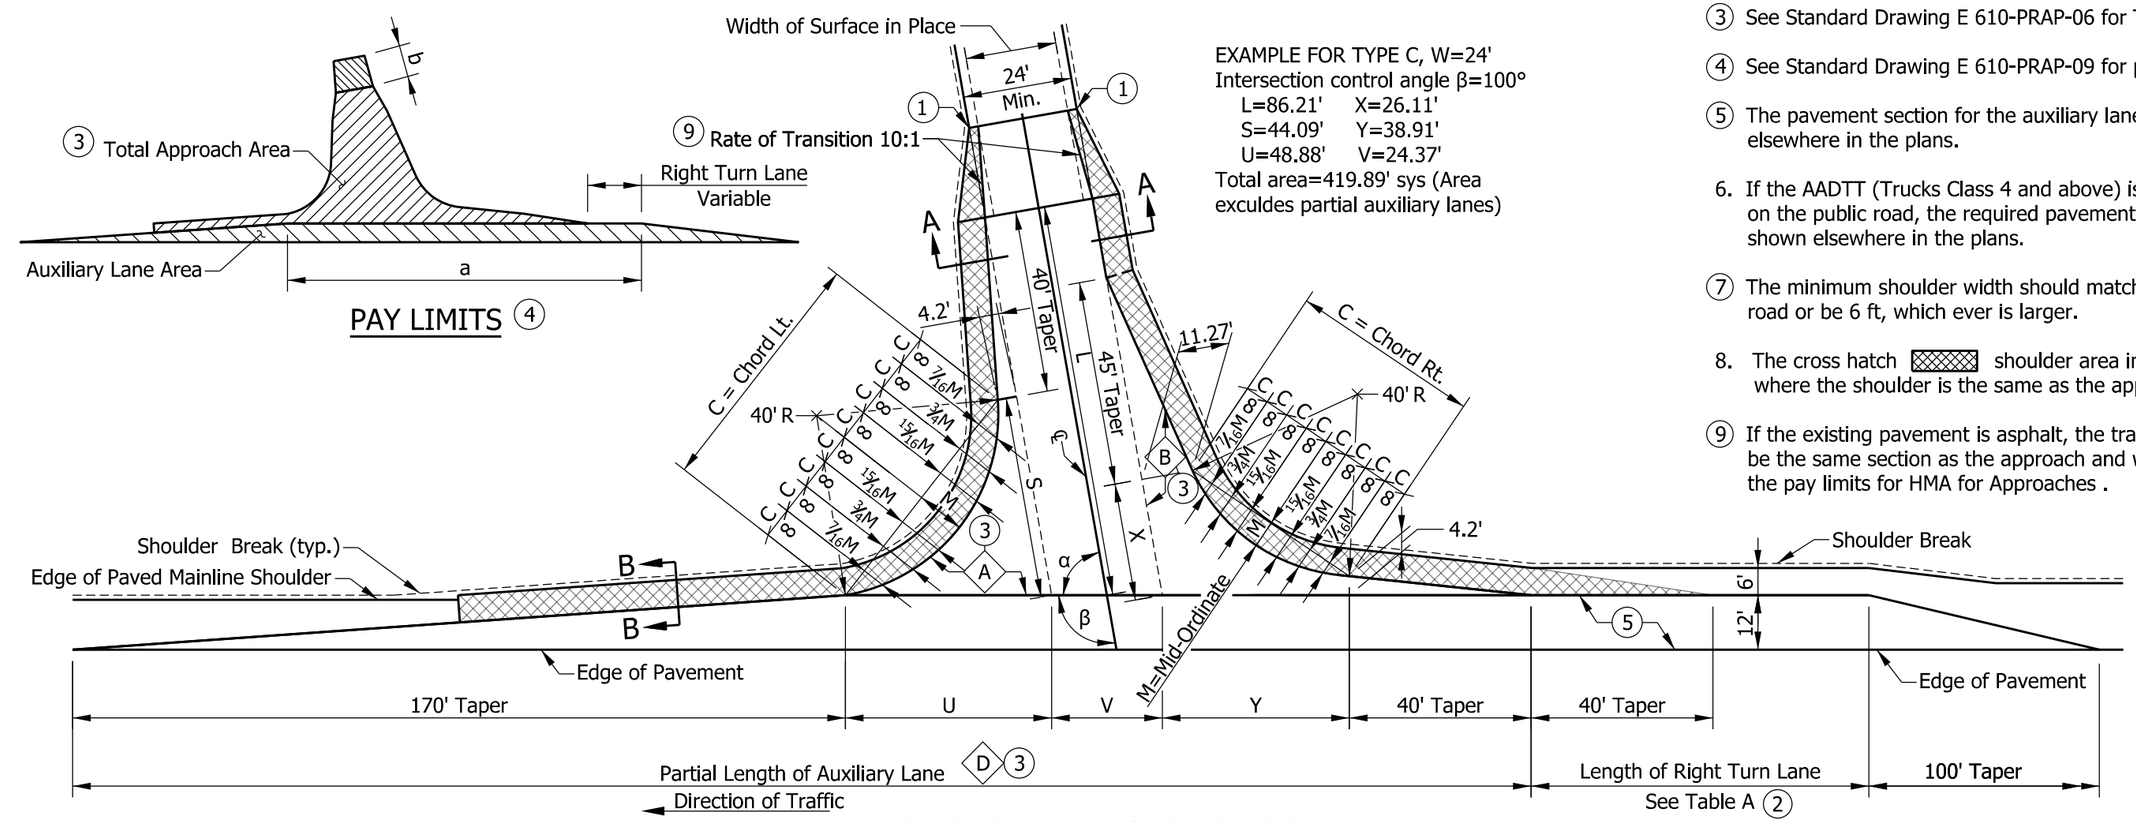
6. If the AADTT (Trucks Class 4 and above) is greater than 400 on the public road, the required pavement section shall be shown elsewhere in the plans.

(7) The minimum shoulder width should match the existing public road or be 6 ft, which ever is larger.

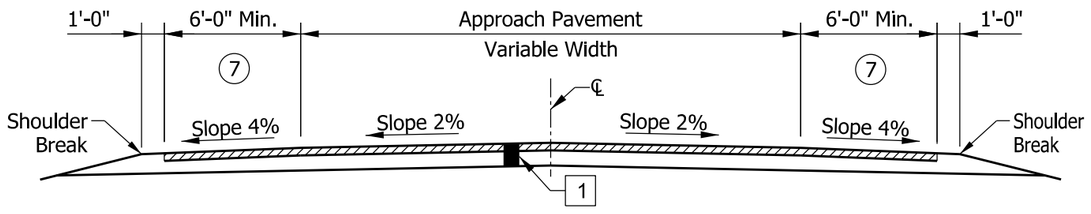
8. The cross hatch ▨ shoulder area indicates the limits where the shoulder is the same as the approach pavement.

(9) If the existing pavement is asphalt, the transition area shall be the same section as the approach and will be included in the pay limits for HMA for Approaches .

PAY LIMITS (4)



PUBLIC ROAD APPROACH TYPE C



SECTION A-A MINIMUM PAVEMENT SECTION

LEGEND

1 AADTT ≤ 400
HMA for Approaches, Type B, consisting of:
165 lbs/syd HMA Surface, Type B, on
275 lbs/syd HMA Intermediate, Type B, on
660 lbs/syd HMA Base, Type B, on
Subgrade Treatment, Type II (6 in. Coarse Aggr. No. 53) on Geogrid Type IB

NOTES:

1. See Standard Drawing E 610-PRAP-05 for Public Road Approach Type C.
2. If intersection control angle is less than 70° or greater than 110° a special design will be required.

LEGEND:

α = ANGLE OF TURN
The angle through which a vehicle travels on the public road approach toward making a right hand turn. It is measured from the tangent on which a vehicle approaches the intersecting road to the corresponding tangent on the intersecting road to which the vehicle turns.

β = INTERSECTION CONTROL ANGLE

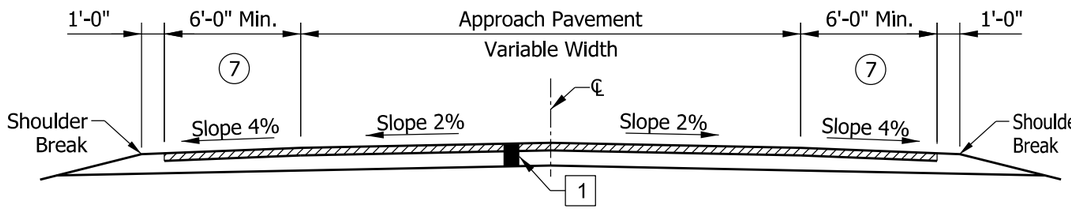
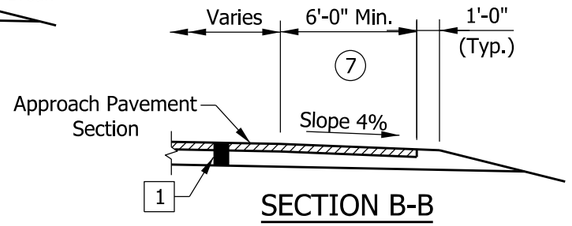
PUBLIC ROAD APPROACH TYPE D



SECTION A-A MINIMUM PAVEMENT SECTION

LEGEND

[1] AADTT ≤ 400
HMA for Approaches, Type B, consisting of:
165 lbs/syd HMA Surface, Type B, on
275 lbs/syd HMA Intermediate, Type B, on
660 lbs/syd HMA Base, Type B, on
Subgrade Treatment, Type II (6 in. Coarse Aggr. No. 53) on
Geogrid Type IB



SECTION B-B

NOTES:

(1) Match existing shoulder width. Minimum width is 2 ft.

(2) See Standard Drawing E 610-PRAP-01 for Table A.

(3) See Standard Drawing E 610-PRAP-06 for Table of Values.

(4) See Standard Drawing E 610-PRAP-09 for pay limits details.

(5) The pavement section for the auxiliary lane shall be as detailed elsewhere in the plans.

6. If the AADTT (Trucks Class 4 and above) is greater than 400 on the public road, the required pavement section shall be shown elsewhere in the plans.

(7) The minimum shoulder width should match the existing public road or be 6 ft, which ever is larger.

8. The cross hatch ▨ shoulder area indicates the limits where the shoulder is the same as the approach pavement.

(9) If the existing pavement is asphalt, the transition area shall be the same section as the approach and will be included in the pay limits for HMA for Approaches .

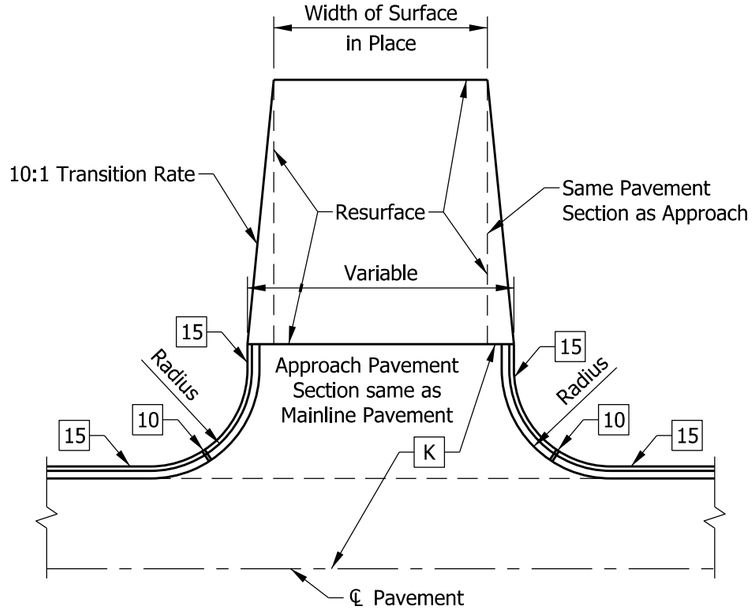
ALLEY APPROACH
WITH PCCP MAINLINE PAVEMENT



STREET OR ALLEY APPROACH
WITH HMA MAINLINE PAVEMENT

NOTES:

1. Radii of 25 ft at minor cross streets shall be provided where space permits.
2. Radii of 30 ft or more at major cross streets where WB-15 trucks and or buses turn repeatedly.
3. Radii of 40 ft or more at major cross streets shall be provided where WB-40 trucks and buses repeatedly turn.
4. Provide radii of 60 ft or more at the intersection of two State or U.S. highways and streets servicing heavy industrial areas requiring repeated turns by the Indiana Design Vehicle.
5. Radius of 10 ft min. to 20 ft min. for alley approaches shall be provided where space permits.

(6) Ear Construction Type B. See Standard Drawing E 605-ERCN-01.

7. For Approaches with PCCP Pavement, see Standard Drawing series E 503-CCPJ for joint details.
8. For PCCP Approaches, if approach length is more than 15 ft, then the D-1 Contraction Joints are required in the transverse direction. Spacing shall be 1/2 the length of the approach or 15 ft max.

LEGEND

(3) Construction joint type D-1. See Standard Drawing E 503-CCPJ-01 for details.

(4) Longitudinal keyway joint, if pavement is PCCP. See Standard Drawing E 503-CCPJ-04 for details.

(8) Longitudinal contraction joint. See Standard Drawings E 503-CCPJ-07 AND -08 for details.

(9) 1" preformed joint filler

(10) Ear construction type A. See Standard Drawing E 605-ERCN-01 for details.

(11) Ear construction type B. See Standard Drawing E 605-ERCN-02 for details.

(14) Integral concrete curb

L = Minimum longitudinal length of crossover

P = Travel lane or turn lane width

W = Width of median

V.C. = Vertical curve length

= Stabilized shoulder

GENERAL NOTES :

1. The crossover length L is based on a 90° road intersection.
2. PCCP crossover shall be constructed if the cross road approach is concrete HMA crossover shall be constructed if the cross road approach asphalt.
3. See Standard Drawings E 610-PRCO-01A through -07 for crossover plans.

NOTES:

1. Specific variations on shrub bed configurations and layout will be shown on plans. Plans will show exceptions to 10 ft minimum distance from ditch to center of outer plants.

(2) Where mulch and tilled area do not extend to right-of -way fence, provide a minimum of 2 ft for grass and weed control.

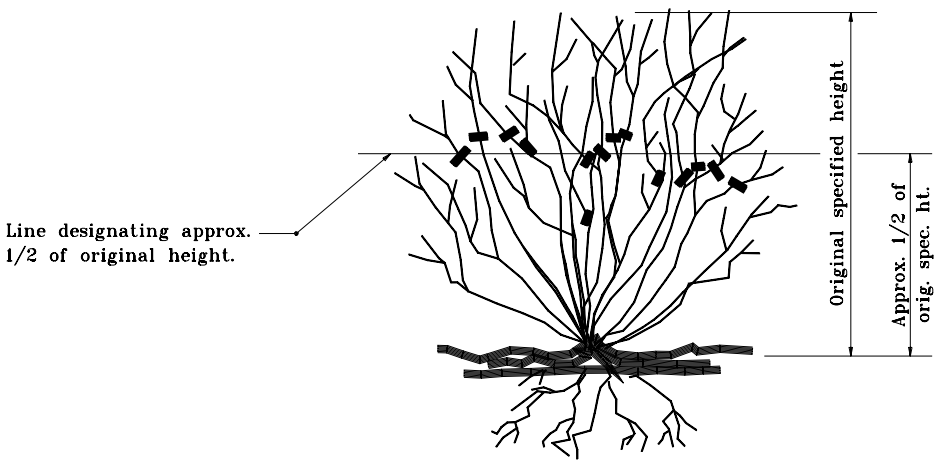
BALLED & BURLAPPED SHRUB



BARE ROOT SHRUB

GENERAL NOTES

1. Pruning operations for balled & burlapped stock shall maintain the natural shape and characteristic branching pattern.

2. Cut back secondary branching to reduce foliage by a minimum of 1/3 to a maximum of 1/2.

3. Budding variations and different growth characteristic of the various shrub species may alter pruning procedures. See suggested procedure on Standard Drawing E 622-LSPR-05 which applies to most shrub species.

ORIGINALLY APPROVED	4-01-95

GENERAL NOTES

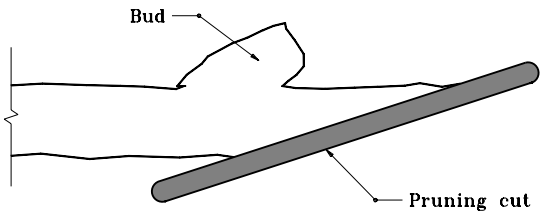
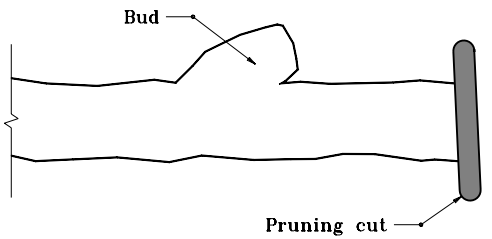
(1) Cut at bud starts opposite the base of bud and slants up toward top of bud.

(2) Cut at secondary branch shall be parallel to remaining branch.

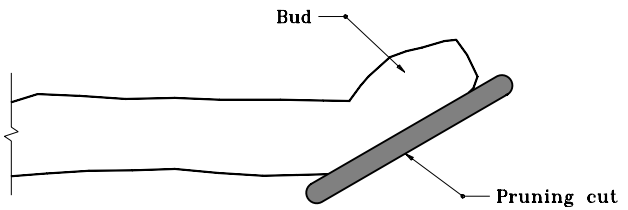
Improper Cut
Pruning cut too slanting (too much heartwood is exposed). Die-back will occur.



Improper Cut
Pruning cut too far beyond bud. Die-back will occur.



Improper Cut
Pruning cut too close to bud (will interfere with bud growth).



Suggested Cuts

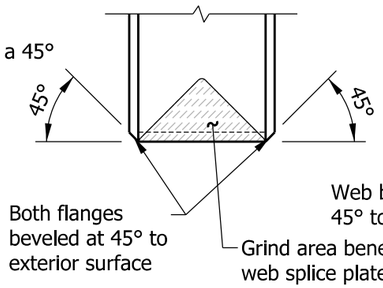
PROCEDURE FOR SPLICING PARTIALLY DRIVEN PILING

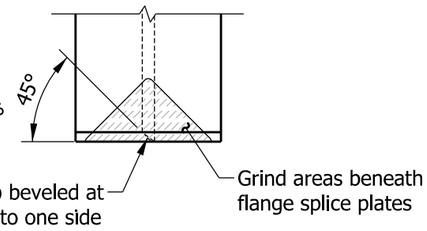
1. Upper Pile Section

Prepare outside of both flanges and one side of web by beveling to a 45° angle. Prepare all surfaces to be welded by grinding.

WEB ELEVATION



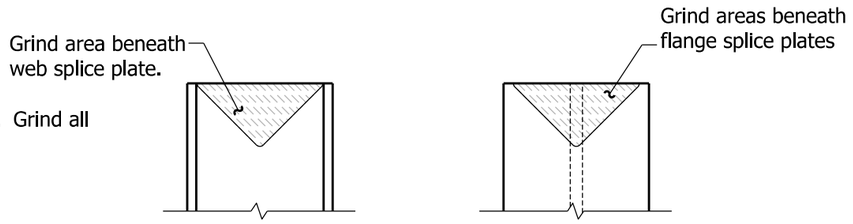
FLANGE ELEVATION



END VIEW

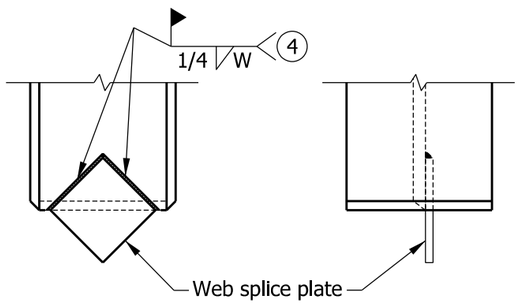
2. Lower Pile Section

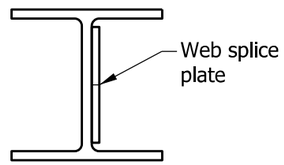
Prepare top of pile by restoring it to its original cross section. Grind all surfaces to be welded, extending 1/2" beyond weld area(s).



3. Upper Pile Section

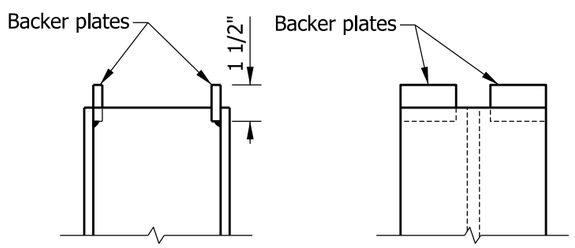
Fillet weld web splice plate to upper pile section at two locations.

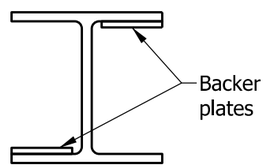




4. Lower Pile Section

Tack weld two backer plates to inside of flange.





Procedure continued on Standard Drawing E 701-BPIL-04.

NOTES

1. Steel H piling may be spliced in a horizontal position prior to driving, using splice plates and web and flange welds as shown.
2. Two flange splice plates, one web splice plate, and four backer plates will be required per splice.
3. All fillet welds shall be single pass.
4. See table for splice plate dimensions W and F.

SPLICE PLATE AND BACKER PLATE DIMENSIONS

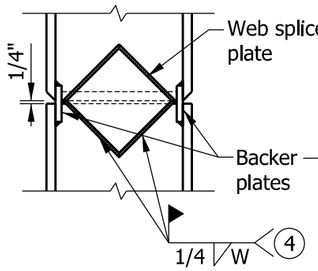
CHIEF ENGINEER DATE

PROCEDURE FOR SPLICING PARTIALLY DRIVEN PILING (cont.)

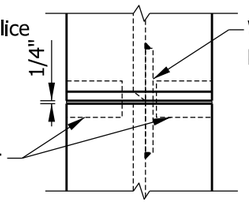
5. Combine Pile Sections

Lift and hold upper pile section into place, maintaining 1/4" gap between upper and lower pile sections by using the remaining two backer plates as a spacing guide. Plumb the pile. Tack weld the untacked side of the two backer plates to the inside upper flange. Remove the backer plate spacers and tack weld them to the inside flange portion of the upper and lower sections of the pile. Fillet weld the remaining two sides of the web splice plate to the lower section.

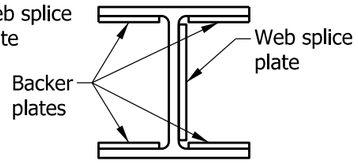
WEB ELEVATION



FLANGE ELEVATION

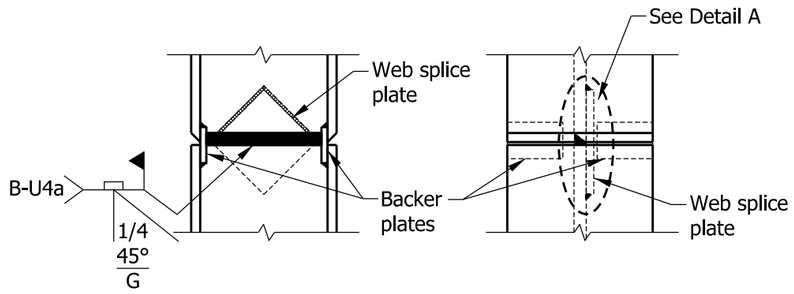


END VIEW



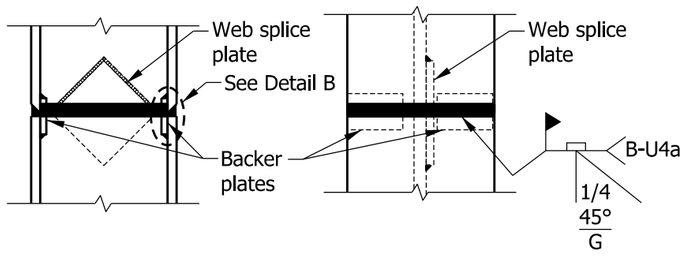
6. Combined Pile Section

Complete Joint Penetration (CJP) weld the web. See Detail A.



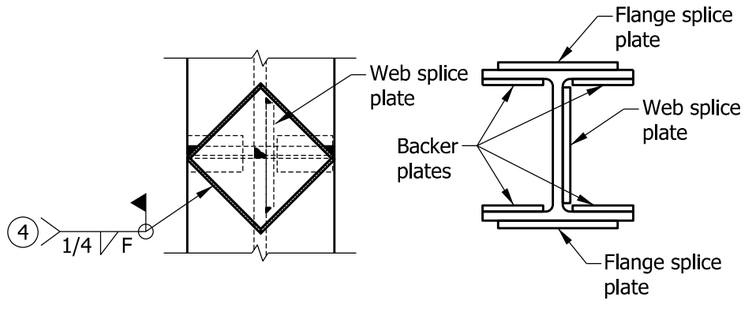
7. Combined Pile Section

Complete Joint Penetration (CJP) weld both flanges. Grind weld smooth with the pile exterior face. See Detail B.



8. Combined Pile Section

Fillet weld the flange splice plates to the flanges.



NOTES

1. Steel H piling may be spliced in a horizontal position prior to driving, using splice plates and web and flange welds as shown.
2. Two flange splice plates, one web splice plate, and four backer plates will be required per splice.
3. All fillet welds shall be single pass.

(4) See Standard Drawing E 701-BPIL-03 table for splice plate dimensions W and F.

QUANTITIES FOR ONE RUNNING FOOT OF RAILING	
Concrete, class C	2.92 CFT
Reinforcing bars*	11.3 LBS

* Wt. of reinforcing bars doesn't include allowance for splices in longitudinal bars

NOTES:

(1) Spacing of joints in tube steel: 20 ft. min. to 40 ft. max.

(2) Concrete bridge railing transition type TTF-2. See Standard Drawing Series E 706-TTTF for details.

(3) 7/8 in. diameter x 1 ft. 6 in. round-head bolt in 1 in. diameter hole. Hole is to be slotted as required for expansion.

(4) Spacing of rail posts: 4 ft. 0 in. min. to 7 ft. 6 in. max.

(5) Distance from centerline of rail splice to centerline of rail post: 18 in. min to 30 in. max.

(6) See Standard Drawing E 706-BRTF-03 for weld access hole detail.

(7) Construction joint type A. See Standard Drawing E 702-CJTA-01 for details.

8. TF-2 railing is acceptable as MASH Test Level 5.

NOTES:

(1) Holes for attachment of guardrail transition, MGS transition, or type TGB. See Standard Drawing E 706-CBRT-04 for details.

(2) RCBA extension for bridge railing transition type TPS-1. See Standard Drawing E 609-TBAE-01 for details.

(3) Holes for attachment of steel bridge railing type PS-1. See Standard Drawing E 706-BRPP-03 for details.

INDEX	
SHEET NO.	SUBJECT
1	Fabrication Tolerances Index and General Notes
2	Fabrication Tolerances Prestressed Box Beam
3	Fabrication Tolerances Prestressed I-Beam and Bulb-Tee Beam
4	Fabrication Tolerances Prestressed NEXT Beam

GENERAL NOTES:

1. Tolerances shown are maximum permissible variations from the dimensions shown on the shop drawings. Tolerances shall not be considered cumulative. Longitudinal tolerances are based on design length. Casting length shall be adjusted to compensate for shrinkage and plastic flow.

2. Mild reinforcing bar concrete cover tolerance shall be +3/8 in. to -1/8 in.

3. Vertical camber shall be checked within 72 hours of transfer of prestressing force. Camber shall be measured within three days prior to shipping and any exceedances shall be reported to the Engineer prior to shipping.

4. Tolerance in length of beam shall be checked after the final curing phase and within three days prior to shipping.

5. Tolerance in horizontal alignment shall be checked immediately after de-tensioning is complete, prior to removal from bed.

6. At concrete bearing area, deviation from plane surface when tested in all directions of the plane surface with a steel straightedge shall not be more than ±1/8 in.

7. Local smoothness of any surface shall not deviate from a 10 ft straightedge by more than 1/8 in.

ELEVATION

SECTION B-B

(Bulb-Tee Section Shown, I-Beam Similar)

NOTES:

1. Center of gravity of draped strand group at the end of the beam shall not be more than ±1/2 in.

② Maximum variation from specified elevation end squareness or skew shall be ±3/16 in. per 12 in. of beam height, 1 in. max.

③ Camber variation from camber shown on the shop drawings shall be ±1/2 in. maximum for beam length of 80 ft or less, ±1 in. maximum for beam length greater than 80 ft.

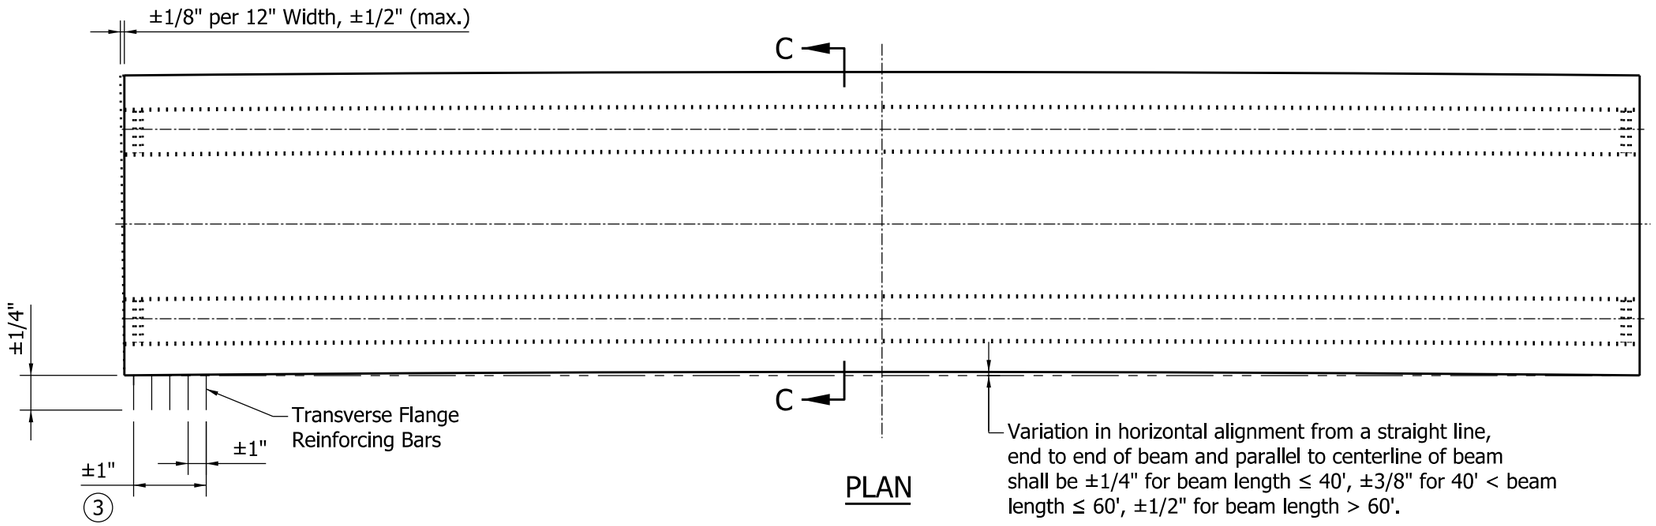
ELIZABETH P. MOUSER REGISTERED No. 10200124 STATE OF INDIANA PROFESSIONAL ENGINEER

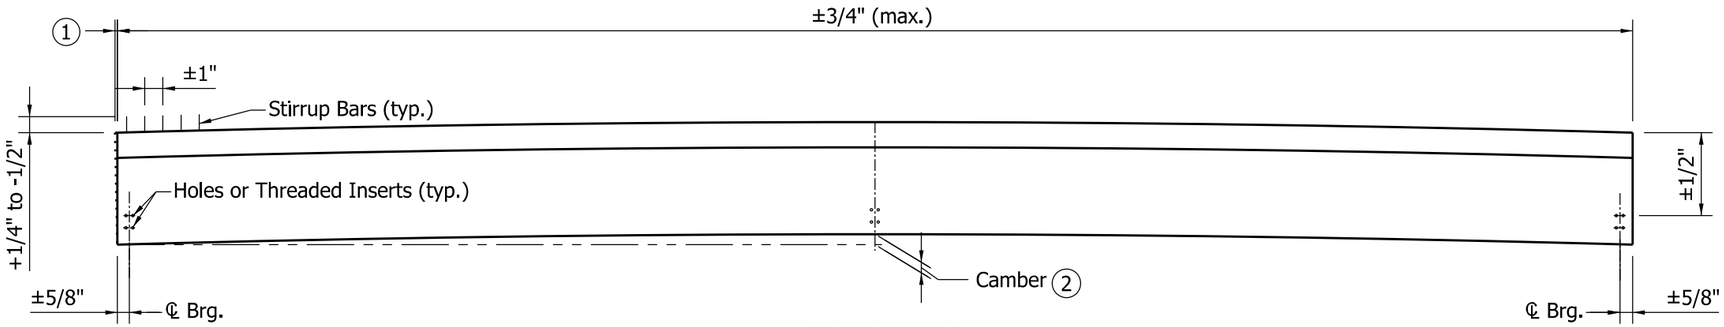
DESIGN STANDARDS ENGINEER — DATE 01/22/2025

CHIEF ENGINEER — DATE 03/20/2025

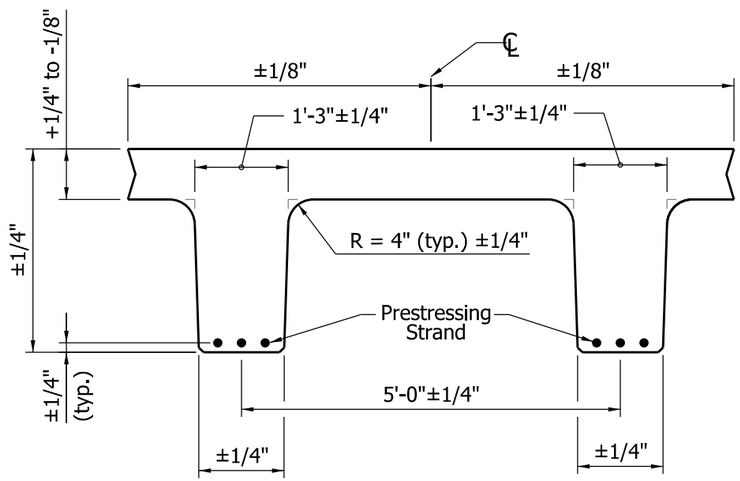


PLAN

Variation in horizontal alignment from a straight line, end to end of beam and parallel to centerline of beam shall be ±1/4" for beam length ≤ 40', ±3/8" for 40' < beam length ≤ 60', ±1/2" for beam length > 60'.



ELEVATION



SECTION C-C

NOTES:

1. Maximum variation from specified elevation end squareness or skew shall be ±1/8 in. per 12 in. of beam height, 1/2 in. max.
2. Camber variation from camber shown on the shop drawings shall be ±1/8 in. per 10 ft length with ±1/2 in. maximum.
3. Spacing tolerance for transverse flange reinforcing bars that project beyond the edge of the top flange shall be measured relative to plan location of each bar and shall not be solely based on as-built location of the adjacent bars.

ORIGINALLY APPROVAL ON SEPTEMBER 9/1/97

GENERAL NOTES:

1. The pavement section for trucks count exceeding the values shown in (S) in the Legend shall be as shown elsewhere in the plans.

   3. A temporary bridge or temporary pipe shall be used as specified. A 28'-0 clear roadway width shall be provided on a temporary bridge.

(4) The connection of the temporary runaround to the existing pavement shall be outside the limits of the approach pavement removal.

(5) Temporary pavement markings will be required as shown. The contractor shall have the option of using temporary tape or paint for all temporary pavement markings except where otherwise specified.

(6) Delineators type D-2 (white) shall be placed at 30 ft maximum spacing on both sides throughout the length of the temporary runaround, including across the temporary structure. If a temporary bridge is used, type 3 object markers shall be placed at all four corners in accordance with the MUTCD.

(7) Spacing of drums at this location shall be 20 ft.

(8) If the runaround posted speed limit is greater than 30 mph the reverse curve sign, XW1-4 (36" x 36"), shall be used at this location.
If the runaround posted advisory speed limit is 30 mph or less, the reverse turn sign, XW1-3 (36" x 36") shall be used.

LEGEND:

Delineator type D-2 (white)

(S) Pavement section for truck count, AADTT < 500, shall be:

165 #/yd² HMA Surface, Type A, on
275 #/yd² HMA Intermediate, Type A, on
6 in. compacted aggregate, size No. 53, Base, on
Type III Subgrade Treatment
(See Genaral Note #1)

1. Protective cover shall be constructed prior to running heavy equipment over installed pipes. The minimum covers are listed below:
   a.) 1.5' for $B_c \leq 18"$
   b.) 3' for $18" < B_c \leq 54"$
   c.) 4' for $B_c > 54"$
2. For backfill purposes, paved shoulders, curbs, and sidewalks are considered pavement. See Standard Drawing E 715-BKFL-10 for pavement limits when curbs, paved shoulders, or sidewalks are present.
3. Flowable or structure backfill shall be encased by compacted earth backfill. The minimum encasement shall be 2 ft. If necessary, the 2:1 slope between the flowable or structure backfill and the encasement shall be modified to maintain the minimum 2 ft encasement.

GENERAL NOTES

1. The invert grade of the grated box end section shall be the same as that of the pipe.
2. See Standard Drawings E 715-GBTT-05 and -06 for dimensions tables.
3. Type II grated box end sections shall be used for culverts parallel to the mainline within the clear zone.
4. See Standard Drawing E 715-GBTT-02 for bending diagrams.

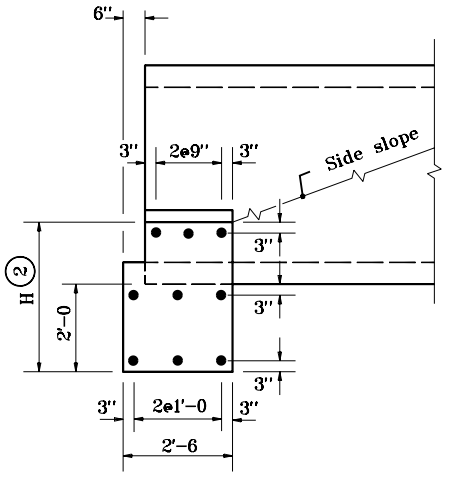
ANCHOR FOR DOUBLE PIPE INSTALLATION
FRONT ELEVATION



SECTION THROUGH ANCHOR

GENERAL NOTES

1. Circular reinforced concrete pipes shown. For details of other pipe alternates, see partial elevations on Standard Drawing E 715-MPCA-02.

(2) For dimension enter chart on Standard Drawing E 715-ANCH-01 with known dimension D.

(3) T = Clear distance between pipes.
For D less than 48", T = 2'-0.
For D of 48" to 96", T = 1/2 D
For D greater than 96", T = 4'-0.

(4) No joint required if G is less than or equal to 30'. One joint required if G is greater than 30' but less than or equal to 42'. Two joints required if G is greater than 42'.

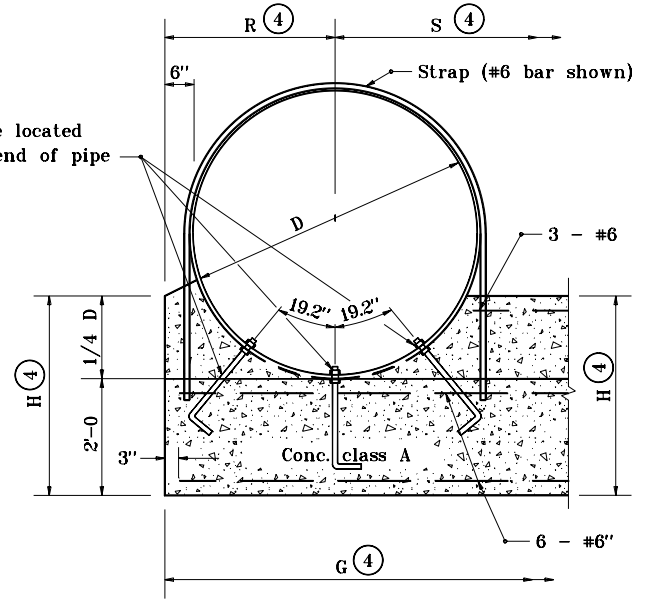
PARTIAL ELEVATION



ANCHOR FOR
CORRUGATED METAL PIPE
PARTIAL ELEVATION

GENERAL NOTES

1. Anchor straps shall be used at both upstream and downstream ends of all C.M. pipes with a diameter or span of 42" or greater.
2. Hook bolts and anchor straps shall be used for all C.M. pipes with a diameter or span of 84" or greater.
3. Riprap shall be placed at the ends of pipe structures when shown on the plans.

(4) For dimension, enter chart on Standard Drawing E 715-ANCH-01 with known dimension D.

(5) For dimension, enter chart on Standard Drawing E 715-ANCH-02 with known span and rise.

7 (Min.) 13 3/4 (Typ.)	71	47	18.1									1.6	12.9

NOTES:

1. Dual entries in the "Corner Radius" column such as 3 (Min.), 3 1/2 (Typ.), represent the following:
   3 (Min.) = Minimum corner radius allowed by AASHTO M 196
   3 1/2 (Typ.) = Corner radius typically available

2. The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

18 (Min.) 34 3/4 (Typ.)	142	91	74.5									1.3	16.3

NOTES:

1. Dual entries in the "Corner Radius" column such as 8 (Min.), 18 3/4 (Typ.), represent the following:
   8 (Min.) = Minimum corner radius allowed by AASHTO M 196
   18 3/4 (Typ.) = Corner radius typically available

2. The tabulated cover heights reflect pipe-arches with typically available corner radii. If a pipe-arch with corner radii other than what is typically available is to be used, a specific design shall be performed to verify structural adequacy.

Corrugated Polyethylene Drainage Tubing				x	
Corrugated Polypropylene Pipe (S)	x	x	x		x
Profile Wall PVC Pipe (S)	x	x	x	x	x

NOTES:

1. The prescribed uses for the pipe types are as follows.
   a. Type 1 Pipe - Culverts under mainline pavement and public road approaches.
   b. Type 2 Pipe - Storm sewer pipe.
   c. Type 3 Pipe - Culverts under driveways and field entrances.
   d. Type 4 Pipe - Drain tile and longitudinal underdrains.
   e. Type 5 Pipe - Broken back and other installations requiring coupled pipe.

2. See to Standard Drawings E 715-PHCL-01 through E 715-PHCL-24 and E 717-PHCL-01 through E 717-PHCL-10 for allowable heights of cover for various pipe materials except Type 4 pipes.

3. See to Standard Drawings E 715-PSLC-01 through E 715-PSLC-03 for required pipe service life criteria.

4. Any pipe material which is in accordance with the designated pipe type, acceptable for height of cover conditions, and conforms to service life criteria may be installed.

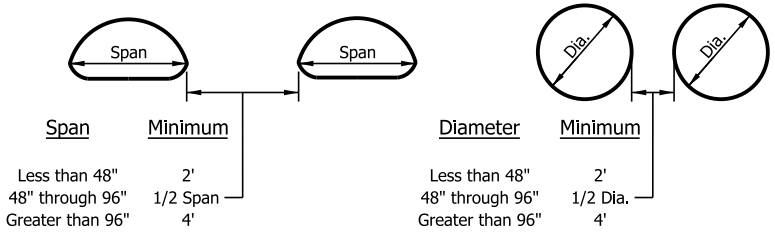
STEEL PIPE-ARCH SECTIONS
END STABILIZATION OF 3" x 1" CORRUGATED (1)



MULTIPLE INSTALLATION

NOTES:

(1) In order to maintain their manufactured shape, all 3" x 1" corrugated steel pipe-arch sections shall have wire ties attached at each end as shown in the detail. The wire ties shall be attached across the largest vertical and horizontal dimension of the pipe-arch. the wire ties shall be installed by the manufacturer and shall remain in place until the on-site installation is complete.

(2) WWR shall be wired to every second circumferential bolt and every twelfth longitudinal bolt.

CHIEF ENGINEER DATE

GENERAL NOTES:

1. "X" entries in the table indicate that a thickness which satisfies the required design service life is not available.
2. The tabulated plate thickness for structural plate steel pipe and pipe-arches reflects the required thickness for the top and side plates. If the tabulated plate thickness is less than 0.280 in. the bottom plates shall be of the next greater available thickness.
3. Corrugated aluminum alloy pipe and pipe-arches and aluminum alloy structural plate pipe and pipe-arches are acceptable with the minimum thickness required to satisfy cover conditions for all non-abrasive sites with a structure pH ≥ 5.0.
4. Corrugated aluminum alloy pipe and pipe-arches with bituminous paved invert and aluminum alloy structural plate pipe and pipe-arches with concrete field paving are acceptable with the minimum thickness required to satisfy cover conditions for all abrasive sites with a structure pH ≥ 5.0.
5. Service life criteria apply only to reinforced concrete, corrugated metal, and structural plate metal pipe. Other materials which conform to the designated pipe type and height of cover parameters are acceptable for installation.
6. Service life criteria do not apply to Type 4 pipe.

REQUIREMENTS FOR REINFORCED CONCRETE PIPE PROTECTION

Pipe Slope	Minimum pH to Attain Design Service Life	
	50 Year	75 Year
Less than 3%	4.0	4.5
3% to 10%	4.5	5.0
Greater than 10%	5.0	5.5

For a structure pH lower than the minimums listed above, reinforced concrete pipe shall not be used.

INDIANA DEPARTMENT OF TRANSPORTATION

SAFETY METAL CULVERT END SECTIONS FOR CORRUGATED PIPE

JANUARY 1998

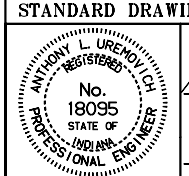
STANDARD DRAWING NO. E 715-SMES-06



DESIGN STANDARDS ENGINEER

DETAILS PLACED IN THIS FORMAT 11-15-99

/s/ Anthony L. Uremovich 11-15-99
DESIGN STANDARDS ENGINEER DATE

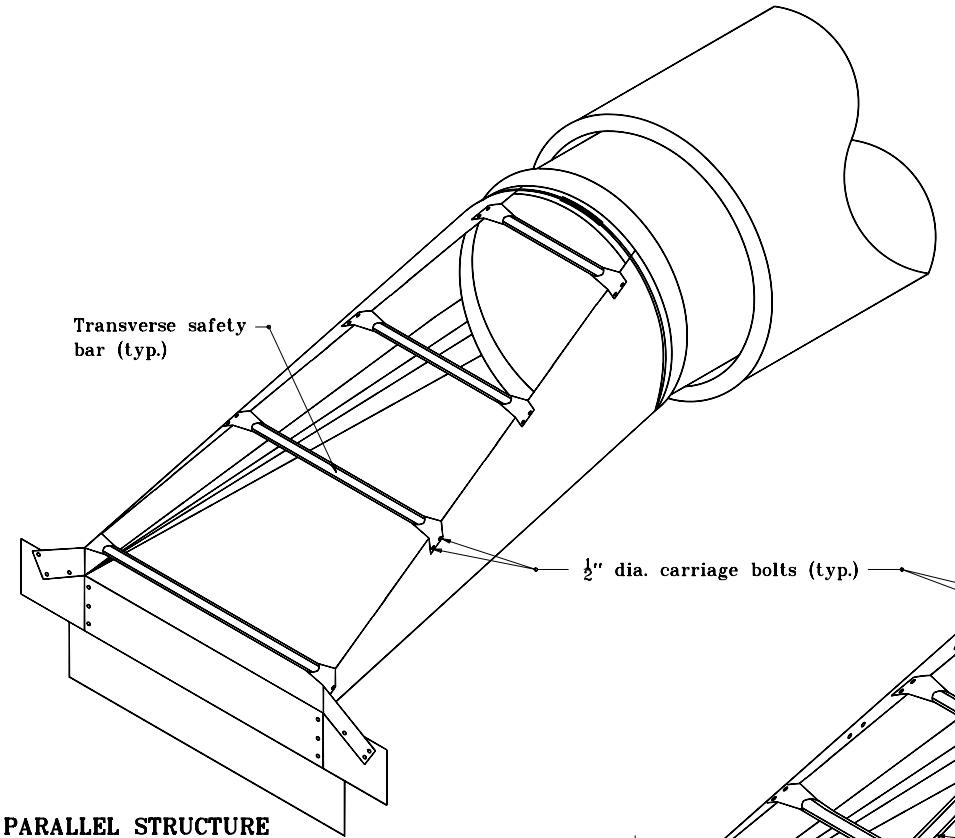
/s/ Firooz Zandi 11-15-99
CHIEF HIGHWAY ENGINEER DATE

ORIGINALLY APPROVED 1-02-98

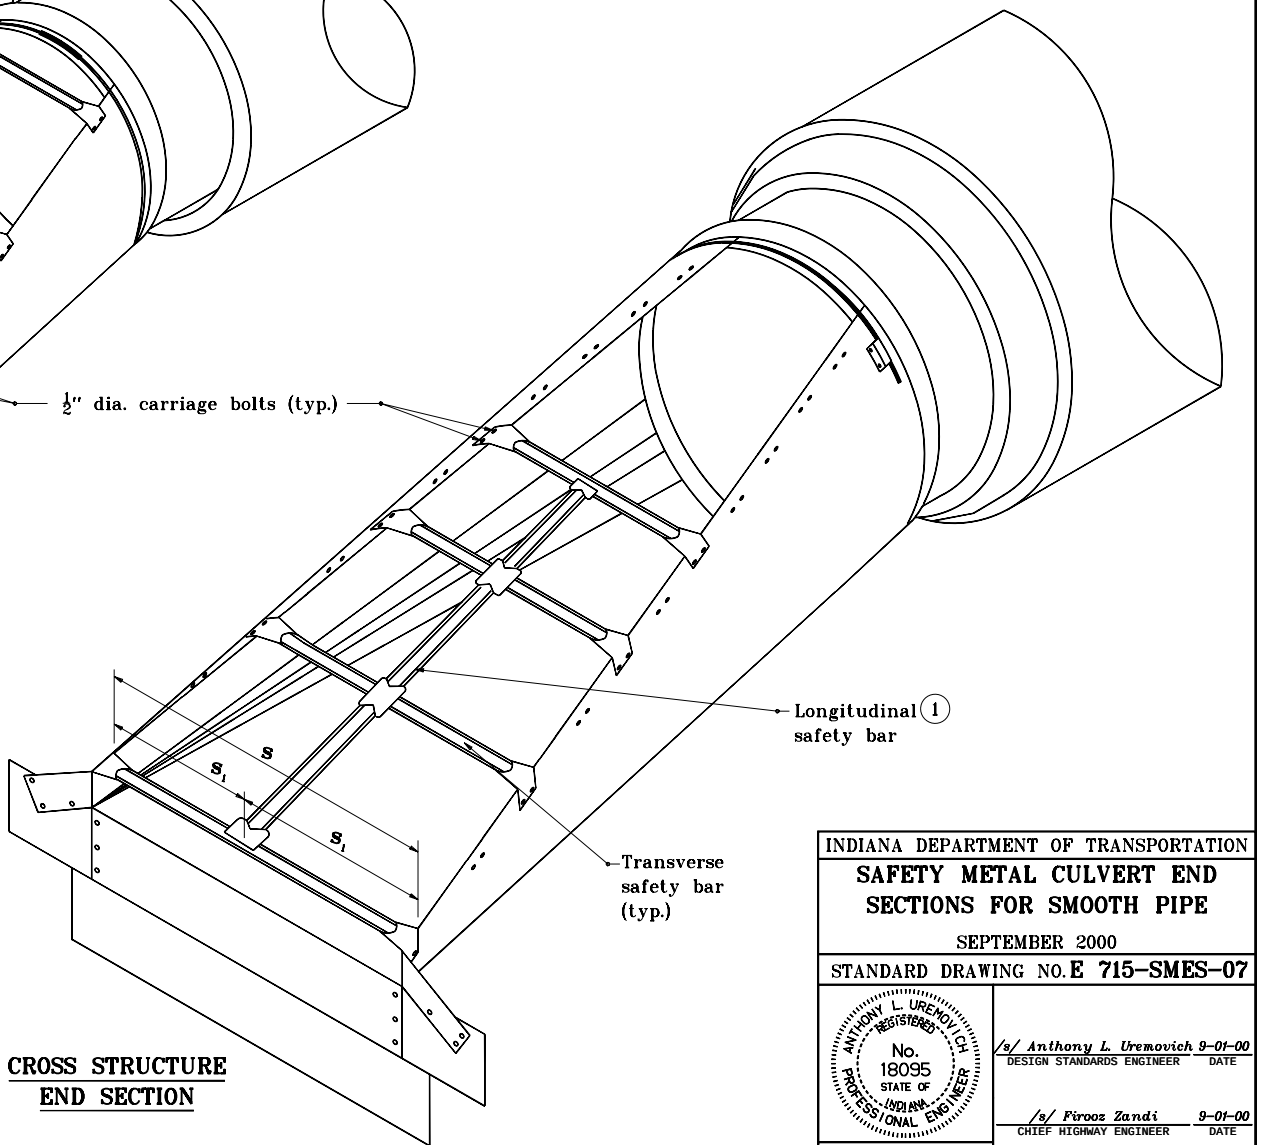
GENERAL NOTES

1. Longitudinal safety bar shall be welded to transverse bars. For cross structure and section, if S ⟨ 2'–6, no longitudinal safety bar is required. If S ⟩ 2'–6, longitudinal safety bar(s) shall be provided so S_1 ⟨ 2'–6.

2. Bolts shall be oriented with threads to inside of end section.



PARALLEL STRUCTURE END SECTION



CROSS STRUCTURE END SECTION

LEGEND

s – Overall span

s_1 – Span between end section edge and longitudinal safety bar or between longitudinal safety bars.

$$s_1 = \frac{s}{n+1}$$

where n = Number of longitudinal safety bars

ORIGINALLY APPROVED 1-02-98

GENERAL NOTES

(1) Toe plate extension is to be the same thickness as the end section. Dimension shall be end section overall width less 6".

(2) Transverse safety bars shall be Schedule 40 galvanized steel pipe. Pipe to be galvanized after forming. Number of bars req'd will vary depending on the length of the end section.

(3) See Standard Drawing E 715-SMES-11 for Section A-A.

4. See Standard Drawing E 715-SMES-12 for variable dimensions.

GENERAL NOTES

1. Anchor straps shall be used at both upstream and downstream ends of all C.M. pipes with a diameter or span of 42" or greater.
2. See Standard Drawing E 715-PASD-01 for anchor strap details.
3. Hook bolts and anchor straps shall be used for all C.M. pipes with a diameter or span of 84" or greater.
4. See Standard Drawing E 715-PAHB-01 for hook bolt details.
5. Riprap shall be placed at the ends of pipe structures when shown on plans.

(6) For dimension chart see Standard Drawing E 715-ANCH-01.

(7) For dimension chart see Standard Drawing E 715-ANCH-02.

GENERAL NOTES

1. Refer to Standard Drawing E 717-SPCA-01 for single pipe anchor details.

2. Refer to Standard Drawings E 717-MPCA-01 and E 717-MPCA-02 for multiple pipe anchor details.

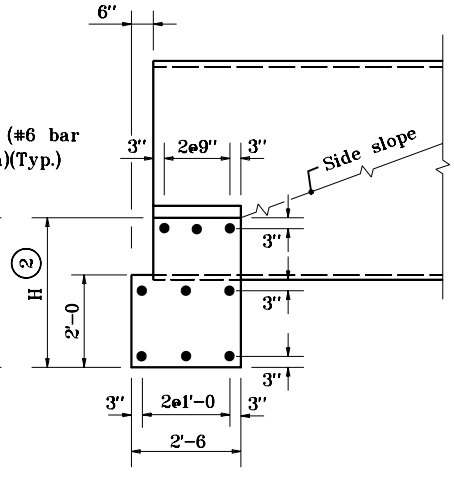
ANCHOR FOR DOUBLE PIPE INSTALLATION
FRONT ELEVATION



SECTION THROUGH ANCHOR

GENERAL NOTES

1. Circular pipes shown. For details of structural plate pipe-arches alternates, see partial elevations on Standard Drawing E 717-MPCA-02.

(2) For dimension, enter chart on Standard Drawing E 717-ANCH-01 with known dimension D.

(3) T = Clear distance between pipes.
For D less than 48", T = 2'-0.
For D of 48" to 96" T = 1/2 D
For D greater than 96", T = 4'-0.

(4) No joint required if G is less than or equal to 30'. One joint required if G is greater than 30' but less than or equal to 42'. Two joints required if G is greater than 42'.

ANCHOR FOR STRUCTURAL PLATE PIPE-ARCH
PARTIAL ELEVATION

GENERAL NOTES

1. Anchor straps shall be used at both upstream and downstream ends of all structural plate pipes and pipe-arches.
2. See Standard Drawing E 715-PASD-01 for anchor strap details.
3. Hook bolts and anchor straps shall be used for all structural plate pipes and pipe-arches with a diameter or span of 84" or greater.
4. See Standard Drawing E 715-PAHB-01 for hook bolt details.
5. Riprap shall be placed at the ends of pipe structures when shown on the plans.

(6) For dimension, enter chart on Standard Drawings E 717-ANCH-01 or E 717-ANCH-02 with known dimension D or span and rise.

ANCHOR FOR STRUCTURAL
PLATE PIPE-ARCH
FRONT ELEVATION

GENERAL NOTES

1. Anchor straps shall be used at both upsteam and downstream ends of all structural plate pipes and pipe-arches.
2. See Standard Drawing E 715-PASD-01 for anchor strap details.
3. Hook bolts, and anchor straps shall be used at all structural plate pipes and pipe arches with a diameter or span of 84" or greater.
4. See Standard Drawing E 715-PAHB-01 for hook bolt details.

(5) For dimension, enter chart on Standard Drawing E 717-ANCH-01 or E 717-ANCH-03 with known span and rise.

(6) For dimension, enter chart on Standard Drawing E 717-ANCH-02 with known dimension D.

BRICK OR BLOCK

CONCRETE

GENERAL NOTES

1. Brick, block, or concrete may be used.
2. Precast catch basin type W may be substituted for catch basin type A.

(3) 2" dia. pipe drain from bottom of curb to inlet. Aggregate to be placed around inlet end of pipe.

(4) 3" dia. pipe to be kept open for drainage of subgrade or base until surface is placed.

5. Reinforcement required if Dim. A < 2'-6. Reinforcement not required if Dim. A ≥ 2'-6.

(6) T = 8" for brick structure
T = 6" for segmental block structure

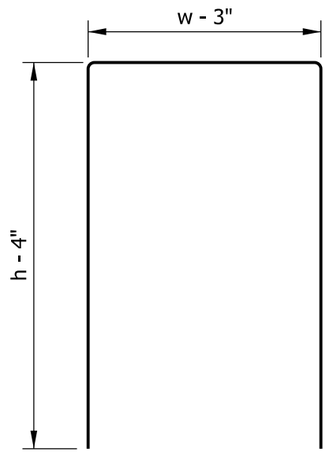
TYPICAL SECTION



#4 BENT BAR

NOTES:

1. Precast coping unit length shall be 10'-0".
2. Reinforcing bar size, length, and spacing shall be determined by the manufacturer.
3. All chamfered edges shall be 3/4".
4. See Standard Drawing E 703-BRST-01 for reinforcing-bar bending details and notes.

(5) Leveling concrete is required when adjacent top panels do not provide a continuous surface on which to place the precast coping, e.g., stepped panels or rectangular panels on a sloping grade. Leveling concrete is not required when custom top panels provide a surface parallel to the finished grade.

(6) Use only when leveling concrete is required.

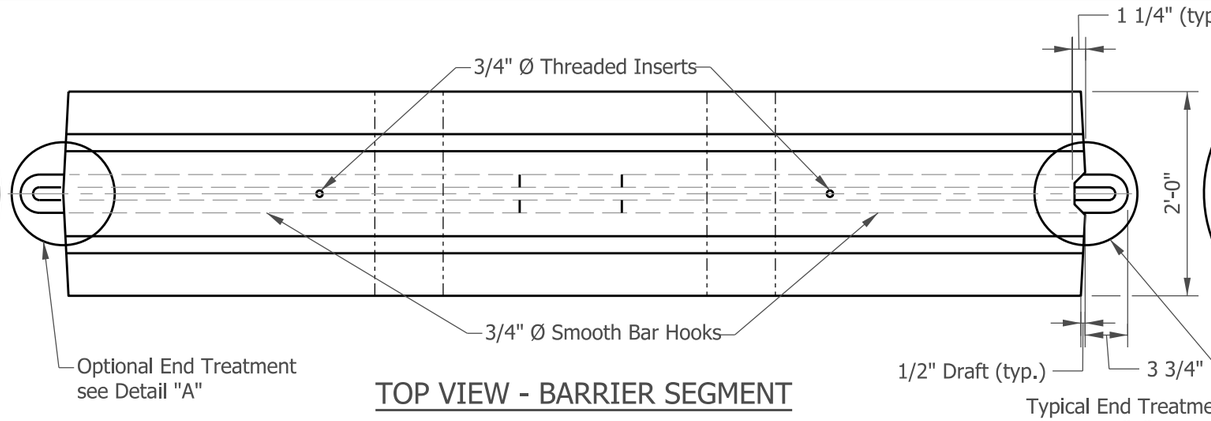
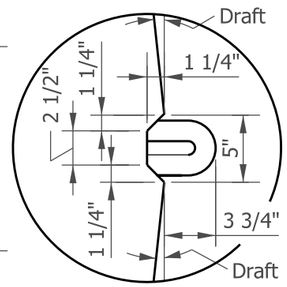
DETAIL "A"



TOP VIEW - BARRIER SEGMENT



DETAIL "B"

NOTES:

1. For freeways and interstates, the maximum barrier flare rate and construction clear zone distance shall be based on 70 mph for the first run of barrier within the construction zone. For subsequent barrier placement, the barrier flare rates and construction clear zone distance shall be based on 70 mph unless otherwise shown on the plans.
2. The barrier taper flare rate and construction clear zone distance are shown in Table No. 1. Construction clear zone distance is measured from the through travel lane. The barrier taper flare rate shall be as shown or flatter.
3. The dimensions of the lifting slots are subject to adjustment as necessary to accommodate handling equipment.
4. For additional connection details see Standard Drawing E 801-TCCB-03.

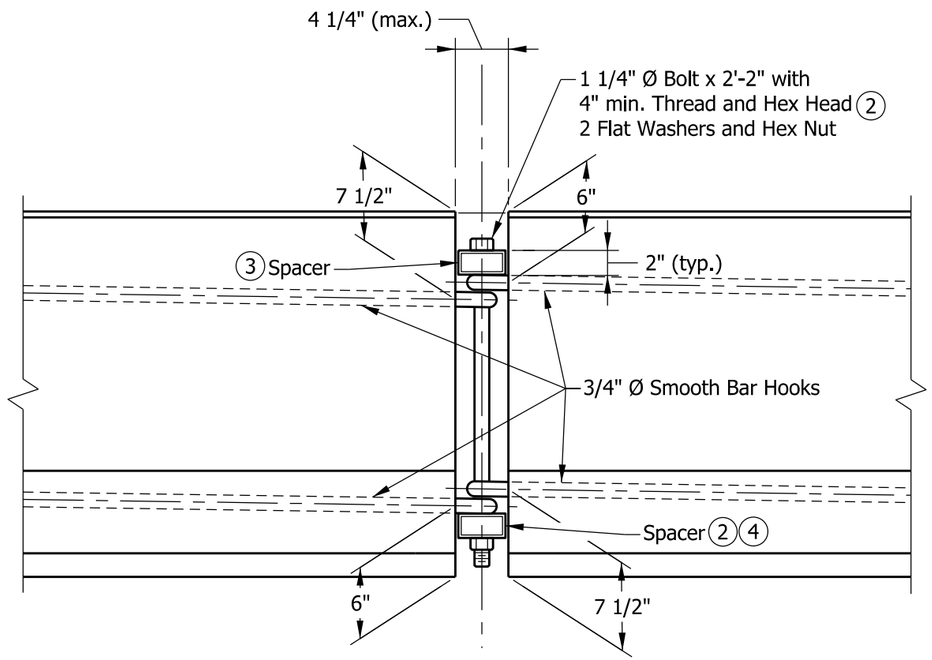
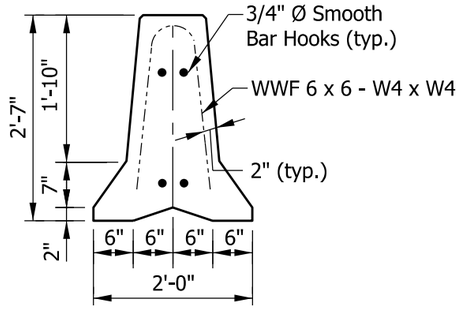
REINFORCEMENT DETAILS

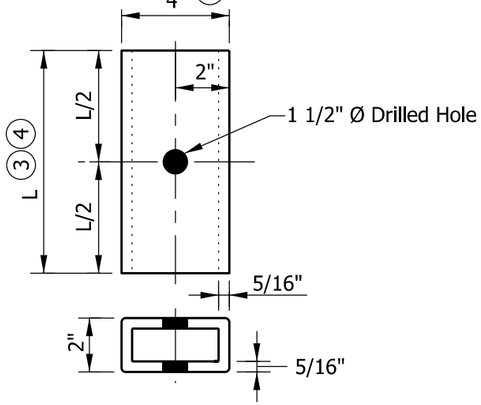


FRONT VIEW

CONNECTION DETAIL



SECTION A-A (1)



SPACER DETAIL

NOTES:

(1) Section A-A shows reinforcement with welded wire fabric. The WWF may be bent to the shape of the wall.

(2) Hex nut may be tack welded to bottom spacer to facilitate installation and removal. Bolts shall be torqued only to tight condition. Clearance between the spacer and the ends of the barrier shall allow angular deflection at the joints to allow flare rate 11:1 or flatter.

(3) Top spacer TS 4" x 2" x 5/16" x 10" long.

(4) Bottom spacer TS 4" x 2" x 5/16" x 1'-4" long.

5. Where necessary to meet short radius curving alignment, the shorter top spacer (10") may be substituted for the standard bottom spacer (16").

6. For additional connection details see Standard Drawing E 801-TCCB-02.

(7) Where very short radius curving alignment is encountered, spacers may be TS 3" x 2" x 1/4" x the appropriate length as shown above.

8. In lieu of the connection detail shown, the J-J Hook temporary barrier connection of Easi-Set Industries as described in FHWA acceptance letter B-52 of March 26, 1999 may be used.

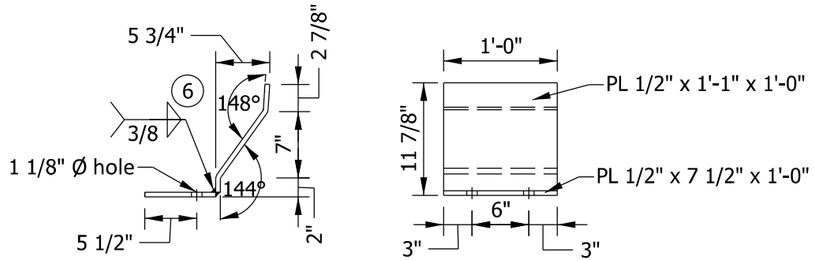
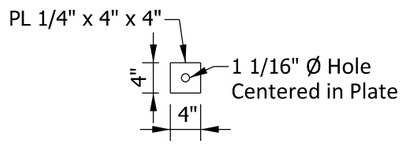
TOP PLATE DETAIL



BENT PLATE ANCHOR BRACKET DETAIL



TOP PLATE WASHER DETAIL

NOTES:

1. All steel shall be ASTM A-36 hot rolled unless otherwise noted.
2. J-J Hooks are a product of Easi-Set Worldwide. Hooks shall be cast into the barrier in accordance with the manufacturer's recommendations.

(3) The drop-in anchor and bolt shall be tightened to the anchor manufacturer's specifications. The anchor shall have a minimum ultimate shear capacity of 26.4 kips.

(4) Bent plate anchor bracket shall be attached to a concrete surface using one of the following anchor systems. Minimum embedment shall be in accordance with the manufacturer's recommendations, but not less than 4 1/2 in.
- 1-in. threaded rod, grade 55 minimum, with washer and nut. Rod shall be installed using an approved epoxy chemical anchor system with a minimum ultimate shear capacity of 21.2 kips: or
- 1-in. diameter wedge anchor; or
- 1-in. nominal diameter drop-in anchor with 1-in. diameter, grade 5 hex bolt.

(5) When concrete will remain in place after anchoring is removed, the threaded rod anchoring system shall be used. The rod shall be completely removed, the hole shall be blown out to remove any moisture or debris, and the hole completely filled using the same epoxy that was used for anchoring the rod.

(6) The anchor bracket may be fabricated from a single bent plate instead of the welded two-plate detail shown.

2	Channelizing Devices
3	Merge or Shift Taper
4	Channelizing Devices Usage
5	Type III Barricade
6	Typical Construction Sign Mounting
7	Type III Barricade Application for Road Closure for Thru Traffic
8	Type III Barricade Application for Road Closure to All Traffic
9	U Channel Steel Post Splice Detail
10	Temporary Transverse Rumble Strips
11	Worksite Speed Limit Sign Assembly
12	Worksite Speed Limit Sign Assembly Longitudinal Placement

GENERAL NOTES:

1. Unless otherwise noted, channelizing devices in tangent sections shall be 100 ft where the permanent posted speed limit is 50 m.p.h. or greater, and the spacing shall be 50 ft where the permanent posted speed limit is less than or equal to 45 m.p.h.

2. Unless otherwise noted, the spacing of channelizing devices in tapers shall be equal in feet to the permanent posted speed limit in m.p.h.

3. All channelizing devices shall satisfy NCHRP 350 or MASH crash evaluation criteria.

4. It is not necessary to delineate a drop-off of 3 in. or less adjacent to active travel lanes. Where channelizing devices are used to delineate drop-offs of 3 in. or less adjacent to active travel lanes, at least 33 in. of the device shall be above the adjoining pavement surface. Where channelizing devices are used to delineate a drop-off greater than 3 in. adjacent to active travel lanes, at least 27 in. of the device shall be above the adjoining pavement surface and a Type C warning light shall be attached to the top of the device (on the pavement side). In no case shall more than 9 in. of the device be below the adjoining pavement surface.

5. The proper orientation in respect to approaching vehicular traffic shall be maintained on channelizing devices. Drums are the preferred channelizing device in a tight radius curve and at intersections.

6. **Short-term stationary**,work that occupies a location for more than one hour within a single daylight period.
Intermediate-term stationary, work that occupies a location for more than one daylight period up to three days, or nighttime work lasting more than one hour.
Long-term stationary, work that occupies a location for more than three days.

CHIEF ENGINEER DATE

NOTES:

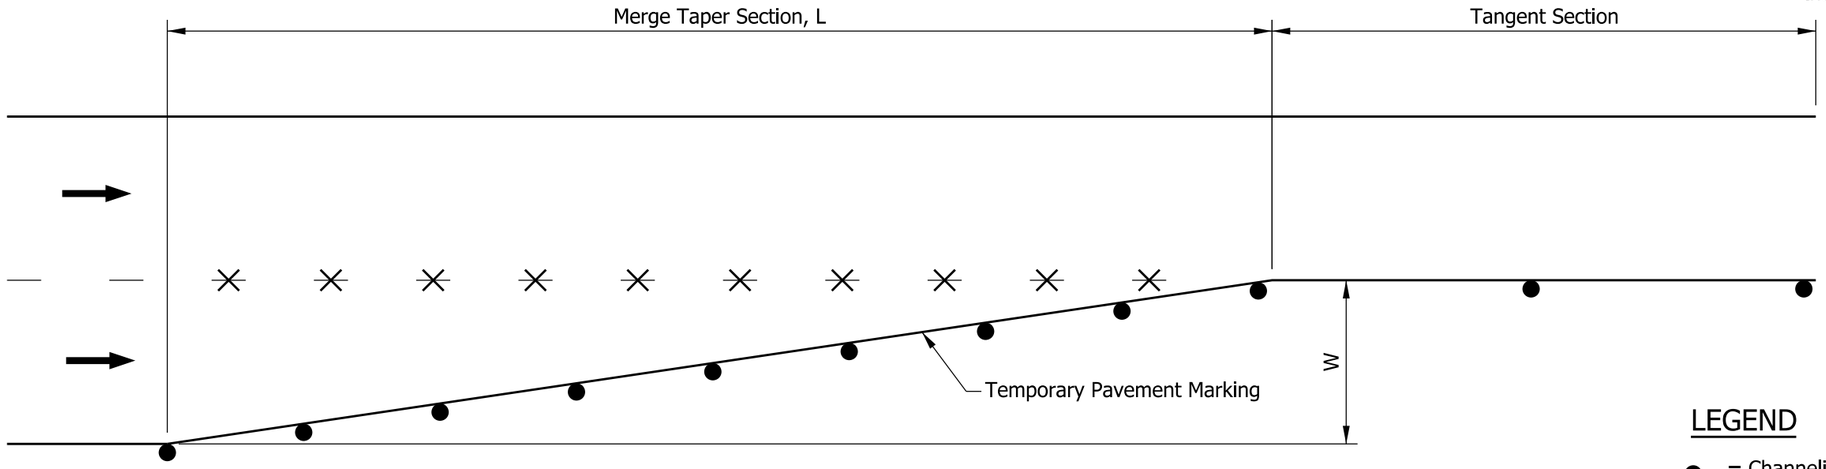
1. For freeways, a taper length of 840 ft shall be used for the first merge taper. For subsequent merges, a length of 840 ft shall be used unless otherwise shown on the plans.
2. A shift taper preceded by a merge taper shall be separated by a tangent section equal to or greater than the length of the shift taper.



LEGEND

- ● = Channelizing Device
- ✳ = Removal of pavement markings and prismatic reflectors
- → = Direction of Traffic
- L = Minimum length of taper in ft
- S = Posted speed limit prior to the construction zone in mph
- W = Width of lane or shift in ft

MERGE TAPER				
S	Min. Taper Length L			
MPH	W = 9	W = 10	W = 11	W = 12
25	95	105	115	125
30	135	150	165	180
35	185	205	225	245
40	240	270	295	320
45	405	450	500	540
50	450	500	550	600
55	495	550	605	660
60	540	600	660	720
65	585	650	715	780
70	630	700	770	840
75	675	750	825	900

For W not shown in the table, L = W x S for a speed of 45 mph or greater.
L = W x $S^2/60$ for a speed of 40 mph or lower.

SHIFT TAPER				
S	Min. Taper Length L/2			
MPH	W = 9	W = 10	W = 11	W = 12
25	50	55	60	65
30	70	75	85	90
35	95	105	115	125
40	120	135	150	160
45	205	225	250	270
50	225	250	275	300
55	250	275	305	330
60	270	300	330	360
65	295	325	360	390
70	315	350	385	420
75	340	375	415	450

For W not shown in the table, L is one half that required for a merge taper.

CHANNELIZING DEVICE USAGE TABLE

NOTES:

(1) Spacing in tangent shall be 40 ft maximum; spacing between devices in taper shall be numerically equal in feet, maximum, to the posted speed limit in m.p.h.

(2) Spacing in tangent shall be 80 ft maximum; spacing between devices in taper shall be numerically equal in feet, maximum, to the posted speed limit in m.p.h.

(3) Spacing in tangents shall be 50 ft maximum when the speed limit is 45 m.p.h. or below; spacing in tangents shall be 100 ft maximum when the posted speed limit is 50 mph or above; in cases where the posted speed limit is intermittently set to 45 m.p.h. the channelizing devices shall be maintained at 90 ft maximum spacing; spacing of channelizing devices on tapers shall be numerically equal in feet, maximum, to the posted speed limit in m.p.h.

(4) May only be used for daylight restrictions.

(5) May not be used for long-term, stationary work (more than 3 days).

(6) 30 lb ballast configuration required.

7. For the purpose of channelizing device usage and spacing, the posted speed limit is the permanent posted speed limit, temporary speed limit, or worksite speed limit, whichever is lower.

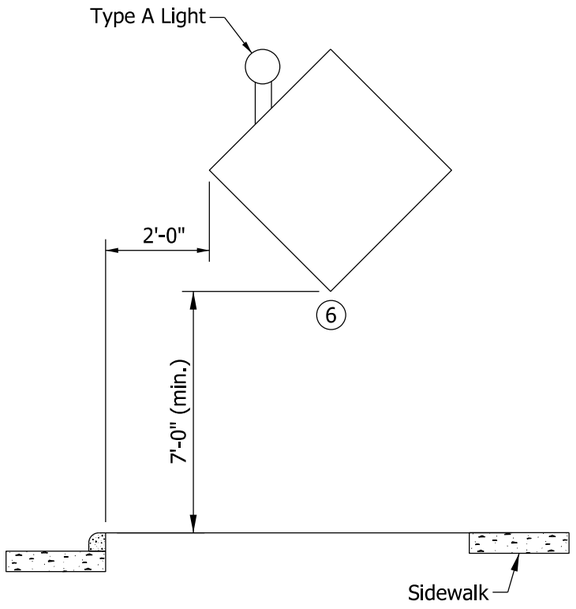
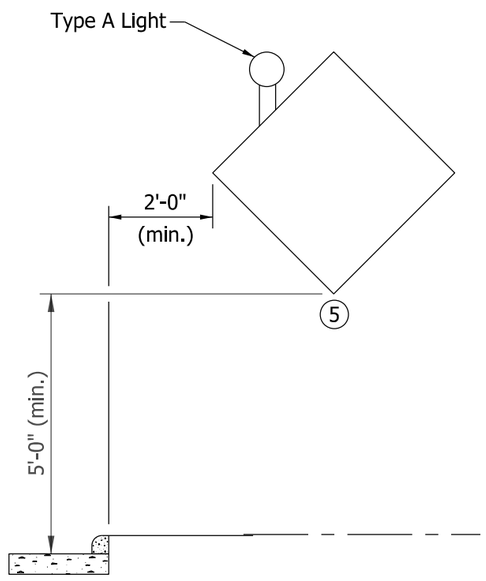
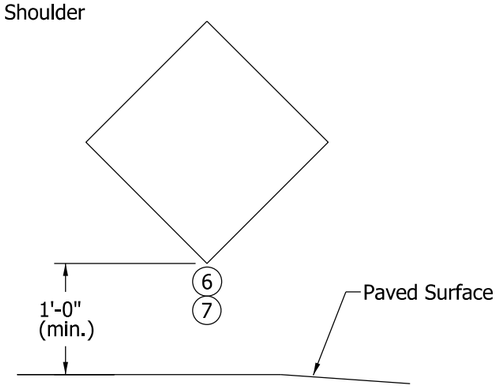
ROADWAY WITHOUT CURB





CURBED ROADWAY



TEMPORARY MOUNTED CONSTRUCTION SIGN

NOTES:

1. See Standard Drawing E 801-TCSN-07 for additional notes.
2. Signs, lights, and supports shall satisfy NCHRP 350 or MASH crash evaluation criteria.
3. An advisory speed plaque, required to be placed with another construction sign, may be mounted on the post closest to the roadway at a height not less than 4 ft above the edge of pavement adjacent to the sign. The bottom of the construction warning sign shall not be lower than the top of the advisory speed plaque.
4. Type A warning light required on all construction signs.
5. In urban area or on Interstate route, mounting height shall not be less than 7 ft.
6. When signs are placed on sidewalk, a 4 ft useable width shall be maintained. No part of the sign or support that is less than 7 ft in height may protrude more than 4 in. into the 4 ft useable sidewalk width.
7. Temporary mounted construction sign for nighttime work or for operations which affect traffic lanes shall have a mounting height of 5 ft above the traveled way. On roadways where on-street parking is allowed, temporary mounted construction signs shall have a minimum sign mounting height of 7 ft above the traveled way.

U CHANNEL STEEL POST SPLICE

NOTES:

1. The spacer thickness shall be 1/16 in. less than the gap between the posts when positioned in the unbolted configuration.
2. The lower bolt, spacer, washer, and nut shall be installed in a prepunched hole within the first 2 in. of the end of the lapped post section.
3. The upper bolt, spacer, washer, and nut shall be installed in a prepunched hole within the first 2 in. of the lower bolt. The maximum spacing between the bolts shall be 1.5 ft. If the length of the post lap is increased such that this 1.5 ft maximum is exceeded, then interior bolts shall be installed such that the maximum space between adjacent bolts does not exceed the 1.5 ft limit.
4. The driven post shall be mounted in front of the upper post with respect to adjacent oncoming traffic, regardless of the direction the sign is facing.

NOTES:

1. Worksite speed limit sign assemblies shall be placed on both sides of the directional lanes when multiple lanes traveling in the same direction are open to traffic. For undivided roadways, or on roadways where a single lane is open in one direction, assemblies are required on only one side of the roadway.

2. Assembly spacing may be reduced using Distance B from Table 6C-1 of the IMUTCD for Urban and Rural Roadways.

3. Worksite speed limit sign assemblies shall be placed 500 ft beyond each crossroad or the last entrance ramp for each interchange, at 1 mile intervals throughout the worksite, or adjacent to the existing normal speed limit signs.

4. For a rural Interstate route application, a truck speed limit sign shall be used and placed immediately to the right of the normal speed limit sign.

5. See Standard Drawing E 801-TCDV-11 for worksite speed limit sign assembly.

INDEX

SHEET NO.	SUBJECT
1	Flagger Operation for Two Lane Roads, Index and General Notes
2	Flagger Operation for Multiple Work Areas with Posted Speed ≥ 50 mph
3	Flagger Operation for Urban Two Lane Roads with Posted Speed < 50 mph (Single Work Area)
4	Flagger Operation on Horizontal Curves (Single Work Area)
5	Maintenance of Traffic for Mobile Operation with Flaggers for Two Lane Roads
6	Flagger Operation for Temporary Traffic Stoppage for Two Lane Roads

GENERAL NOTES:

1. Unless otherwise noted, the spacing of channelizing devices in tangent sections shall be 100 ft where the posted speed limit is 50 mph or greater, and the spacing shall be 50 ft where the posted speed limit is less than or equal to 45 mph.
2. For temporary lane closures during daylight hours, cones or tubular markers may be used in lieu of drums.
3. Temporary pavement markings shall not be required for temporary daylight lane closures
4. Channelizing devices as shown are schematic, the number of channelizing devices will vary based on field conditions.
5. The posted speed limit is the permanent posted speed limit prior to road construction.

GENERAL NOTES:

1. **Short-term stationary**, work that occupies a location for more than one hour within a single daylight period.
   Intermediate-term stationary, work that occupies a location for more than one daylight period up to three days, or nighttime work lasting more than one hour.
   Long-term stationary, work that occupies a location for more than three days.
2. Distances shown may be varied based on field conditions with approval from the Engineer.
3. Unless otherwise noted, the spacing of channelizing devices in tangent sections shall be 100 ft where the posted speed limit is 50 m.p.h. or greater, and the spacing shall be 50 ft where the posted speed limit is less than or equal to 45 m.p.h.
4. Unless otherwise noted, the spacing of channelizing devices in tapers shall be equal in feet to the posted speed limit in m.p.h.
5. The sign spacing shown for freeway lane closures may be reduced to 500 ft for lane closures on rural undivided highways.
6. For interstate lane closures road work 3 miles, road work 2 miles, and road work 1½ mile signs shall be placed in advance of the road work ahead sign.
7. Temporary pavement markings may be omitted for short-term and intermediate-term stationary daylight lane closures.
8. Temporary highway illumination, when specified, shall be as detailed on the plans.
9. Channelizing devices and barrels are schematic and are only intended to show placement and not number or spacing.

GENERAL NOTES:

1. Distances shown are typical except minimum distances may be varied based on field conditions.
2. The spacing of channelizing devices shall be 100 ft where the posted speed limit is 50 m.p.h. or greater.
3. The spacing of channelizing devices shall be 50 ft where the posted speed limit is less than or equal to 45 m.p.h.
4. The spacing of channelizing devices on tapers shall be numerically equal in feet to the posted speed limit in m.p.h.
5. The flashing arrow sign shall not be placed on a sidewalk. The flashing arrow sign shall be placed at a distance of L/3 from the beginning of the taper, where L is the merge taper, see Standard Drawing E 801-TCDV-03.
6. For temporary lane closures during daylight hours, cones or tubular markers may be used in lieu of drums.
7. Temporary pavement markings shall not be required for temporary daylight lane closures.
8. Temporary highway illumination, when specified, shall be as detailed on the plans.

(9) Once the crossovers have been removed, this line shall be restriped yellow if the pavement is to be used for one-way traffic.

(10) For Temporary Crossover Type B, this line shall be removed when the traffic pattern is switched.

(11) The advisory speed plate will not be required when the existing posted speed limit is less than 55 mph.

(12) Spacing of channelizing devices at this location shall be 20 ft.

(13) The "Two-Way Traffic" (XW6-3B) and "Do Not Pass" (R4-1-B) signs shall alternate every 2640 ft throughout the two-lane two-way operation.

(14) For a bridge contract, this distance may be adjusted by the Engineer as required. However, it shall be as close to the minimum as possible.

(15) Once the crossovers have been removed, this line shall be restriped broken white, if the pavement is to be used for one-way traffic.

	10" x 10"	1279	2399	3519	4639	9

NOTES:

1. Post material shall be dense southern pine select natural.
2. See Standard Drawing E 801-TCSN-07 for X, Y and Z dimensions.
3. The table is valid for dimensions within the following range:
   Sign Width (X) between 8'-0" and 45'-0"
   Sign Height (Y) between 4'-0" and 20'-0"
   Clear Height (Z) between 7'-0" and 15'-0"

(4) The length of the connector shall be equal to the sign height Y.

(5) Non-breakaway posts shall be placed outside the clearzone or behind barrier or guardrail. The edge of the panel sign adjacent to traffic shall be at least 6 feet from the face of the barrier or guardrail.

(6) At exterior posts, the Angle Connector shall be installed on the outside face of the post.

7	Pedestrian Detour Midblock Closure with Temporary Crossing
8	Pedestrian Diversion, Streetside at Intersection
9	Pedestrian Diversion, Right-of-way Side
10	Temporary Curb Ramps
11	Temporary Pedestrian Channelizers

GENERAL NOTES:

1. Signs, railings, or other objects may protrude a maximum of 4 inches into the walkway clear area when located 27 inches minimum above the walkway surface.

2. Any construction signs placed in the sidewalk shall include supports with detectable edging in accordance with Part 6 of the MUTCD.

3. Audible information devices, when specified, shall be a minimum of 15 ft apart and may be mounted on channelizing devices, pedestrian channelizers, or on an independent support post. Audible information devices shall not reduce the width of a temporary pedestrian access route to less than 4 ft. Placement of audible information devices shall be as shown on the plans or as directed by the Engineer.

4. Pedestrian traffic signal displays controlling closed crosswalks shall be covered or deactivated.

5. Type A flashing warning lights may be omitted on pedestrian channelizers that support signs and closed sidewalks during daytime only closures.

6. Construction signs shall not reduce the available width of a temporary pedestrian access route to less than 4 ft.

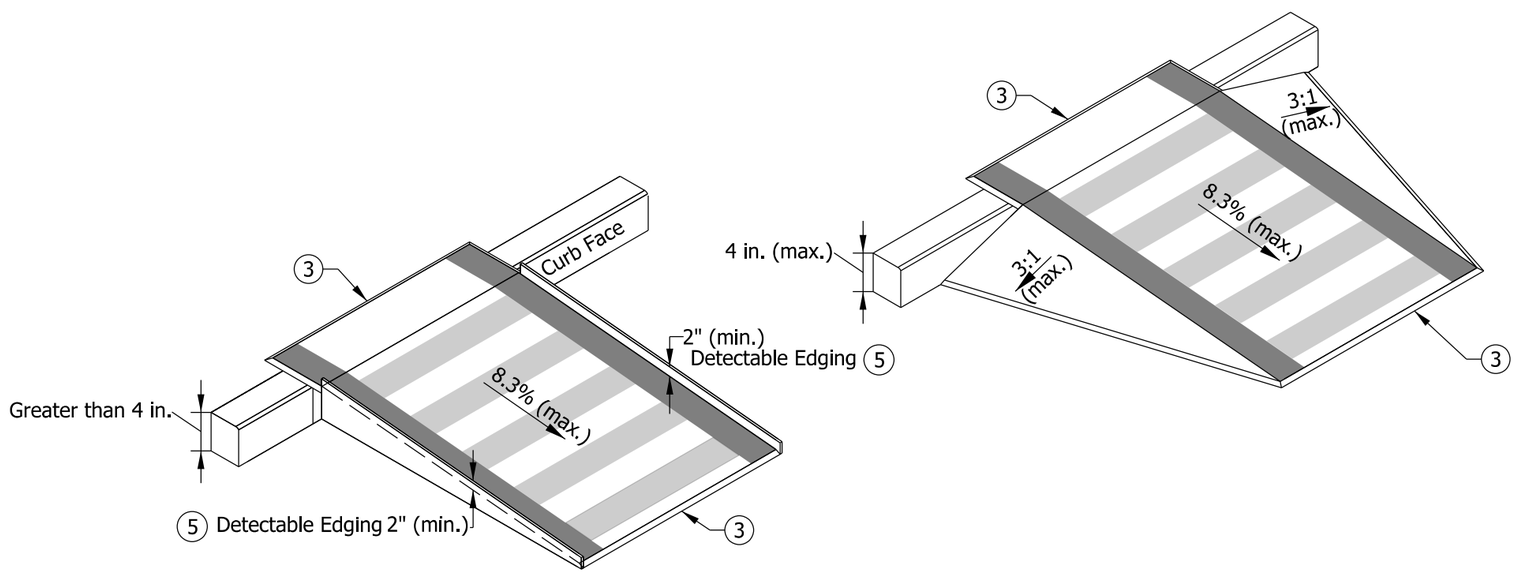
Temporary Curb Ramp - Parallel to Curb



Temporary Curb Ramp - Perpendicular to Curb

NOTES:

1. Water flow in the gutter system shall be maintained.
2. Lateral joints or gaps between surfaces shall be less than 0.5 in. width.
3. Changes in level between surface heights shall not exceed 0.5 in. Lateral edges shall be vertical up to 0.25 in. high, and beveled at 2:1 between 0.25 in. and 0.5 in. in height
4. Handrail shall be provided along a landing area and ramp where the elevation difference between the sidewalk and the street is greater than 6.0 in.
5. A 2.0 in. detectable edge shall be provided along the entire length of the ramp where the elevation difference between the sidewalk and the street is greater than 4.0 in.
6. The rise of a single temporary curb ramp shall be no more than 30 in. If more than one temporary curb ramp is needed at a location due to the change in elevation, a minimum 5 ft landing area shall be used between curb ramps. The landing area shall have a slope of less than 2.0%.
7. The table below is for common curb heights, the curb ramp length for other curb heights shall be based on having a maximum slope of 12:1.

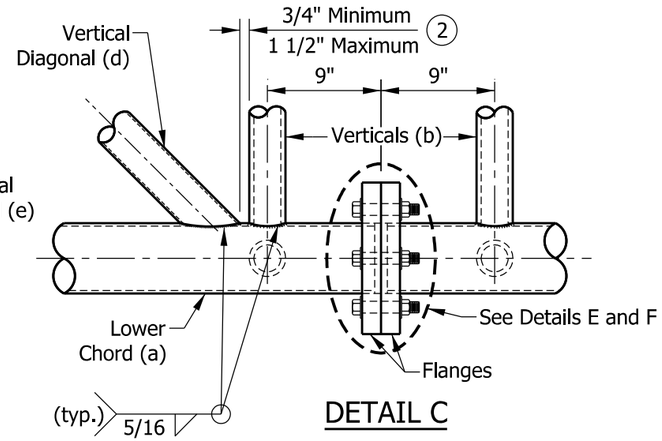
DETAIL B



DETAIL C

NOTES:

1. See Standard Drawings E 802-DBCS-04 and 05 for upper and lower chords connection details.
2. Diagonals shall have a minimum offset from the panel point based on the following: Offset shall be such as to provide a ¾ in. minimum to 1½ in. maximum clearance between any diagonal and any vertical member, and to provide clearance for U-bolt connections of signs.
3. Splicing flanges shall be attached to each arm unit with the arm shop-assembled to camber shown. Arm units shall be in proper alignment and flange surfaces shall be shop-bolted into full contact before welding. Sufficient external welds or tacks shall be made to secure flanges until remaining welds are made after disassembly. Adjacent flanges shall be "match marked" to ensure proper field assembly.
4. Toe edge of diagonal member shall be cut back to facilitate throat thickness per AWS D1.1, Figure 3.2.

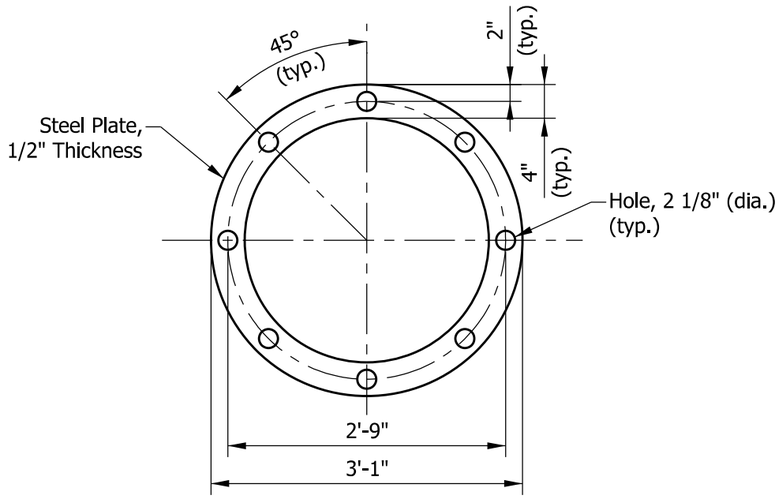
PLAN (6)



ANCHOR AND POSITIONING PLATE

NOTES:

1. Temporary positioning plate and leveling nuts or other engineer-approved methods shall be used to maintain anchor bolt alignment during concrete placement. Positioning plate and associated nuts shall be removed upon completion of the foundation.
2. Threads shall be protected during concrete placement with tape, sleeves, or other means.

(3) Minimum length of galvanizing shall be 1 ft - 6 in. Entire bolt may be galvanized at contractor's option.

(4) Uncoated nut shall be provided at bottom of anchor plate. A deformed thread or chemical thread lock shall be used to secure.

(5) Continuous backer ring shall be used, ¼ in. x 3 in. minimum. Tack welds shall be used only in the root area of final weld.

(6) Anchor bolt nuts shall be tightened in numeral order in accordance with the procedure given on Standard Drawing E 802-SBTS-17.

(7) UT - Ultrasonic Testing, 25% of entire column to base plate weld. MT - Magnetic Particle Testing, 25% or 1 side of 4 stiffeners.

(8) The clear distance between the concrete surface and the bottom of the leveling nut shall be equal to or less than one anchor bolt diameter. The threads of the anchor bolts shall be Unified National Coarse (U.N.C.).

5/8" DIA. U-BOLT DETAIL

NOTES:

1. Walkway gratings shall consist of galvanized steel 19W4 - 1 1/4 in. x 3/16 in. bar grating. Crossbar shall have a maximum gap of 4 in. Moment of inertia Ix = 0.308 in 4ft. A different grating of equal strength may be used upon approval. Attachment shall be clip type or welded to supports per manufacturer's recommendations.

(2) The Contractor shall coordinate with the sign manufacturer so floor inside DMS is 3 in. max up or down to the side of grating. The bottom of the DMS door shall open without obstruction from the grating.

(3) The front face of the DMS shall be tilted at 3° toward approaching traffic. If the DMS is not built with the front face tilted appropriately, a block shall be placed on the top of the back face to obtain the 3° tilt.

(4) One ASTM F3125 Grade A325 bolt ½ in. x 2 in. on each side of the W6x8.5 steel bracket web with one flat washer and one lock nut.

(5) ASTM A449 or A193 Grade B8 U-Bolts. two flat washers, two lock washers, and two lock nuts per U-bolt; 4 required per DMS bracket.

(6) Ladder shall extend 3 ft-6 in. minimum above top of grating.

(7) See Standard Drawing E 802-DBCS-12 for security gate details.

8. See Standard Drawing E 802-DBCS-09 for Section J-J and K-K.

(9) Maximum walkway support bracket spacing shall be 4'-9".

PLAN

(Interior exterior end walkway not shown for clarity.
See Standard Drawings E 802-DMSS-16 & 17 for details.)

ELEVATION

(Handrail not shown for clarity.
See Standard Drawing E 802-DMSS-17 for details.)

END SUPPORT
Column (h)

NOTES:

1. See Standard Drawings E 802-DMSS-03 for isometric view and table with member sizes.
2. Max. deviation of any chord from a straight line in any section shall be 1/8 in. Box truss to be max. of 3/8 in. out of a straight line over the entire length of the structure in the vertical plane.

(3) See Standard Drawings E 802-DMSS-06 and 07 for chord connection welds, flange, and chord end plate details.

(4) See Standard Drawing E 802-DMSS-16 for the bottom of structure elevation and grating details.

(5) Maximum sign area is 300 sq. ft.

(6) See Standard Drawing E 802-DMSS-03 for counter diagonals on exterior truss sections.

(7) See Standard Drawing E 802-DMSS-08 for upper chord connections details.

(8) See Standard Drawing E 802-DMSS-09 for lower chord connections details.

(9) See Standard Drawing E 802-DMSS-13, 14, and 15 for access ladder and security gate details.

(10) See Standard Drawing E 802-DMSS-19 for wiring layout and wire-outlet details.

(11) See Standard Drawings E 802-DMSS-20 through 23 for spread foundation details.

(12) See Standard Drawing E 802-DMSS-11 for handhole detail.

NOTES:

1. The table of dimensions for a dynamic message sign structure is divided and put on two Standard Drawings E 802-DMSS-04 and 05. The table shows dimensions with all sections requirements accounted for.
2. All panels on a truss shall be the same length. The minimum panel length for all trusses is 5 ft - 0 in. and the maximum is 6 ft - 6 in.
3. A single interior section in a truss shall have an even number of panels to maintain the pattern of the vertical diagonals.
4. Use minimum number of sections for each truss, keeping the maximum section length at 35 ft - 6 in.
5. See Standard Drawing E 802-DMSS-05 for required camber.

SECTION J-J

NOTES:

1. In lieu of fabricated handhole frame as shown, frame may be cut from 3 in. plate (rolling direction vertical).
2. See Standard Drawing E 802-SNWR-03 for grounding post details. Grounding post to be placed on far side of support directly opposite center of handhole.
3. See Standard Drawing E 802-DMSS-10 for handhole locations.
4. See Standard Drawing E 802-DMSS-03 for thicknesses of end-support column.
5. Bolts shall be located to miss J-hook.
6. One handhole required on each end support.

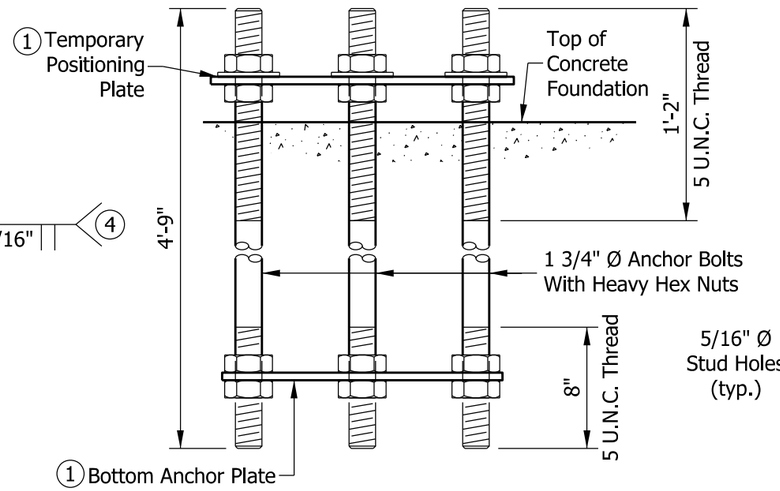
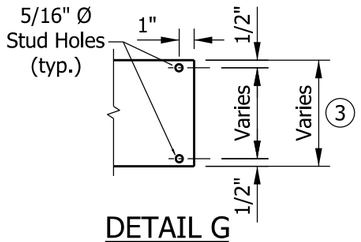
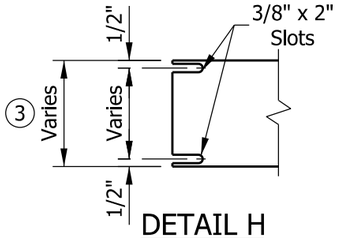
TEMPORARY POSITIONING PLATE



ANCHOR BOLT DETAILS BEFORE CONCRETE PLACEMENT



DETAIL G



DETAIL H

NOTES:

1. Temporary positioning plate and bottom anchor plate shall be used for all foundations. Temporary positioning plate shall be removed after placing concrete.
2. The galvanized metal skirt shall be secured to base plate after erection as shown in skirt detail.
3. Minimum base plate gap is 2½ in. and can be increased up to 5½ in. Metal skirt width shall be at least 1½ in. more than the actual gap.
4. Contractor has the option to use four separate bars. Weld to maintain angles and shapes as shown.
5. For base plate of end-support, see Standard Drawing E 802-DMSS-10.
6. Anchor bolts shall be tightened as shown in the Star Pattern Tightening Sequence. Lubricant shall be from the Department's QPL.

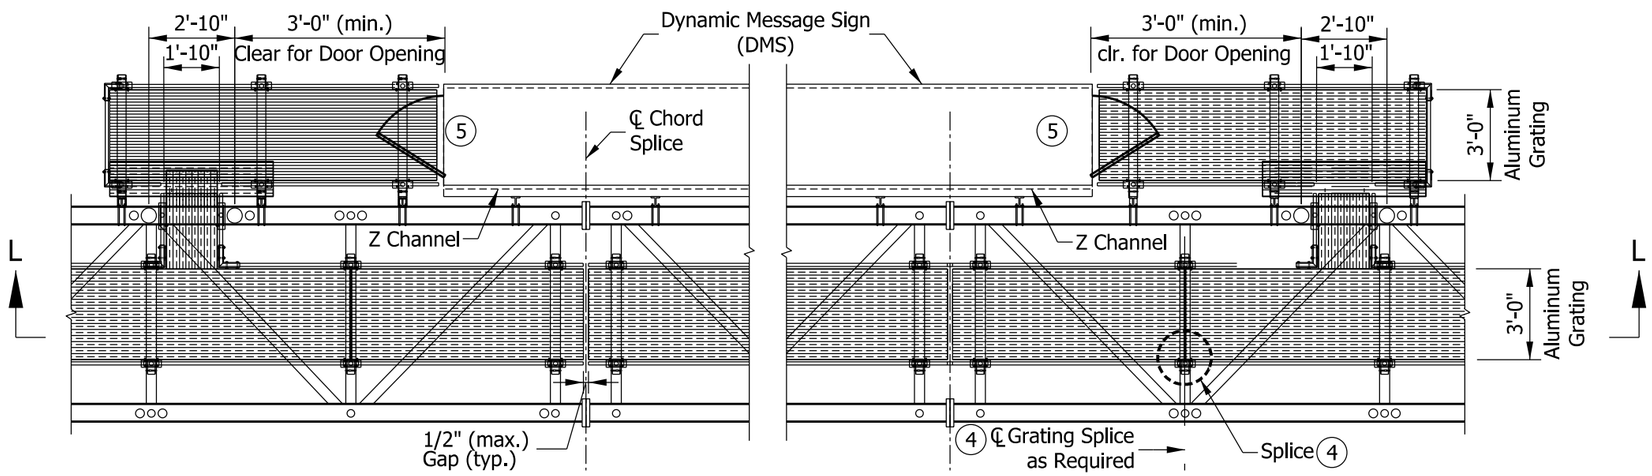
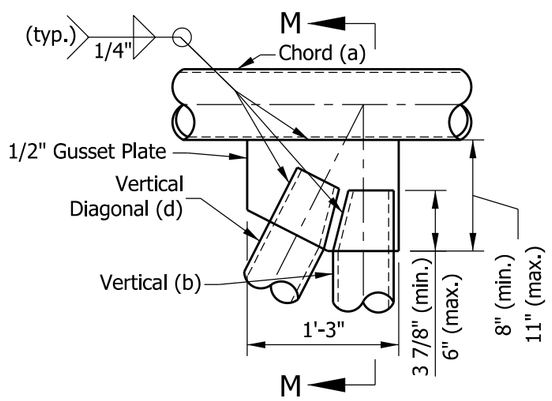
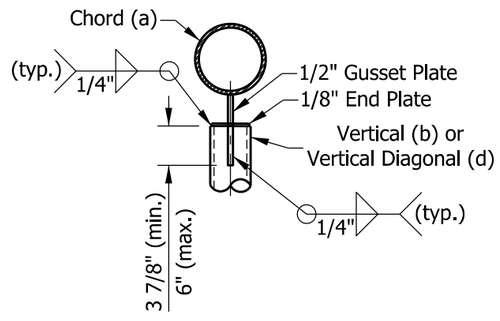
(Handrail omitted for clarity)



WALKWAY GRATING PLAN



CHORD CONNECTION PLATE DETAIL (9)



SECTION M-M

NOTES:

1. Interior walkway gratings are extruded I-bars 2 in. x ¼ in. at 1 3/16 in. center-to-center. Crossbar shall have a maximum gap of 4 in. Moment of inertia I_x = 1.382 in^4. A different grating of equal strength may be used upon approval.
2. Interior walkway grating shall run the full length center to center of end support truss members plus 9 in. at each end.
3. The contractor shall coordinate with the fabricator to determine which truss panel is to be modified to allow opening for access to the DMS door.
4. Interior walkway gratings can be spliced on center of any horizontal truss members as needed. See Standard Drawing E 802-DMSS-18 for typical grating splice detail.
5. The contractor shall coordinate with sign manufacturer so floor inside DMS is one comfortable step to the exterior grating.
6. Truss vertical and diagonal members on each side of the DMS access door shall be aluminum with 6.0 in. diameter and a minimum wall thickness 0.500 in. Counter diagonals shall be aluminum with 4.5 in. dia. and a minimum wall thickness of 0.500 in.
7. Gusset plates shall be installed at vertical and diagonal intersection on each side of the opening for access to DMS door.
8. See Standard Drawing E 802-DMSS-17 for Section N-N.
9. Vertical and horizontal members shall be clipped to maintain centerline intersection with chord. 1 in. clearance between vertical and diagonal members shall be provided.

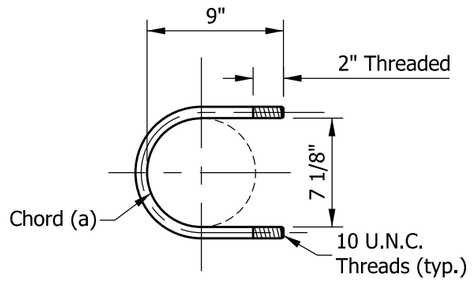
SECTION N-N



1/2" DIA. STAINLESS STEEL
U-BOLT DETAIL

NOTES:

1. The front face of the DMS shall be tilted at 3° toward approaching traffic. If the DMS is not built with the front face tilted appropriately, a block shall be placed on the top of the back face to obtain the 3° tilt.
2. The walkway grating width is nominal and may vary ±1/2 in. based on available standard widths.
3. The bottom of the DMS door shall open without obstruction from the grating.
4. (1) A-325 bolt ½ in. x 2 in. on each side of the WF (A-N) 4 x 3.06 aluminum bracket web with (1) flat washer and (1) lock nut.
5. (2) flat washers, (2) lock washers, and (2) lock nuts per U-bolt; 4 required per bracket.
6. See Typical Drain hole detail.

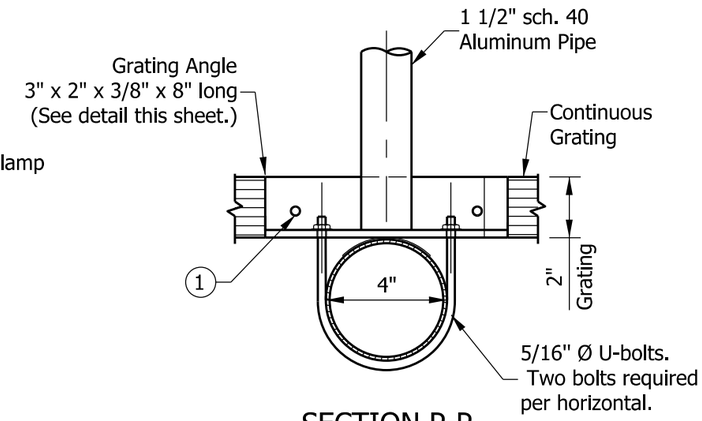
GRATING SUPPORT DETAIL



SECTION P-P

NOTES:

1. Drilling of holes in grating may be done in shop or field, based on Contractor's preference and subject to accurate alignment.
2. Shims may be placed as shown if needed to compensate for alignment variations between horizontal and diagonal pipes beyond adjustment provided by angles. Thicker shims may be used subject to shims performing properly.
3. Tube-to-grating gap may vary from 0 in. to ½ in. max. to align walkway and to allow for camber.

NOTES:

1. All panels on a truss shall be the same length. The minimum panel length is 5 ft - 0 in. and the maximum is 6 ft - 6 in.
2. Camber diagrams are for fabrication only and are measured with trusses fully supported at no-load conditions. Allowable camber tolerance for truss is 25% of specific camber value.
3. Single interior section in a truss shall have an even number of panels to maintain the pattern of the vertical diagonals.
4. The minimum number of sections for each box truss structure shall be used, while maintaining the maximum section length at 36 ft - 6 in.

NOTES:

1. All bracing members shall be machined to provide a snug fit to the chord along the entire edge of bracing member before welding. See Standard Drawing E 802-SBTS-02, 03 and 04 for member locations.
2. End plate at horizontal (c) and horizontal diagonal (e) may be welded as one piece and slotted or welded as two pieces after slotting the member. See Standard Drawing E 802-SBTS-09 for chord end plate details.
3. Vertical and horizontal diagonals shall be fabricated for minimum offset from the panel point offset to provide a ¾ in. minimum to 1½ in. maximum clearance between any diagonal and any horizontal or vertical member.
4. For variable end dimension, see Standard Drawings E 802-SBTS-05, 06 and 07.
5. See Standard Drawings E 802-SBTS-03 and 04 for corner brace locations. Each brace member shall be 3 in. x 1 ft - 9 in. x ½ in. and placed at 45° to vertical.
6. See Standard Drawings E 802-SBTS-11 or 12 for saddle shim detail.

SECTION H-H (TYPES A-E)
SADDLE SHIM DETAIL

NOTES:

1. Toe edge of diagonal member shall be cut back to facilitate throat thickness. See Standard Drawing E 802-SBTS-08 Detail F for toe edge detail.
2. Holes shall be cut in end support columns for W-beams to pass through. Holes shall have a ⅛ in. maximum clearance to W-beam. Holes in opposite sides of column shall be checked for proper alignment prior to cutting.
3. Neoprene pads shall be provided at all chord-to-W-beam bearing surfaces.
4. See Standard Drawings E 802-SBTS-03 and 04 for end support member sizes.
5. A corner brace shall be required on each of the eight external corners of exterior and interior sections. Each brace shall be 1 ft - 9 in. x 3 in. x ½ in. See Standard Drawing E 802-SBTS-08 for corner bracing Detail E.
6. For truss type H, Horizontal (f) will overlap Diagonals (g). Trim Horizontal (f) shall be trimmed for welding to Diagonals (g)
7. See Standard Drawing E 802-SBTS-12 for HSS square-beam as an alternate to truss supporting W-beam (g).

NOTES:

1. Toe edge of diagonal member shall be cut back to facilitate throat thickness. See Standard Drawing E 802-SBTS-08 Detail F for toe edge detail.
2. Holes shall be cut in end support columns for square beams to pass through. Holes shall have a ⅛ in. maximum clearance to square beam. Holes in opposite sides of column shall be checked for proper alignment prior to cutting.
3. Neoprene pads shall be at all chord-to-square-beam bearing surfaces.
4. See Standard Drawings E 802-SBTS-03 and 04 for end support member sizes.
5. A corner brace is required on each of the eight external corners of exterior and interior sections. Each brace shall be 1 ft - 9 in. x 3 in. x ½ in. See Standard Drawing E 802-SBTS-08 for corner bracing Detail E.
6. For Truss type H, Horizontal (f) will overlap Diagonals (g). Trim Horizontal (f) shall be trimmed for welding to Diagonals (g).

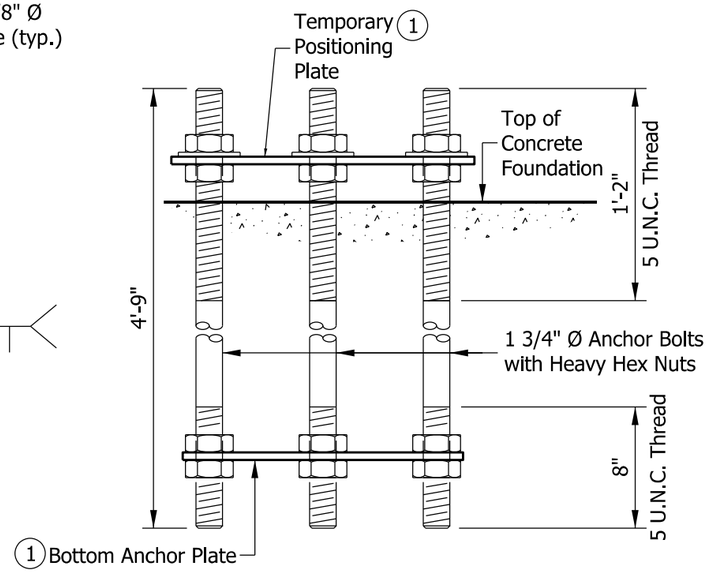
TEMPORARY POSITIONING PLATE



ANCHOR BOLT DETAILS
BEFORE CONCRETE PLACEMENT

NOTES:

1. Temporary positioning plate and bottom anchor plate shall be used for all foundations. Temporary positioning plate shall be removed after placing concrete.
2. Secure galvanized metal skirt shall be secured to base plate after erection as shown in skirt detail.
3. Minimum base plate gap shall be 2 ½ in. and can be increased up to 5 ½ in. Metal skirt width shall be at least 1 ½ in. more than the actual gap.
4. May use four separate 5 in. plates welded together to maintain angles and shape as shown.
5. May use two separate 3 in. and two separate 5 in. plates welded together to maintain angles and shape as shown.
6. See Standard Drawings E 802-SBTS-13 for end support base plate details.
7. See Standard Drawing E 802-SBTS-17 for anchor bolt hardware tightening requirements.

STAR PATTERN
TIGHTENING SEQUENCE

NOTES:

1. Anchor bolts shall be clean and not damaged or out of plumb.
2. Threaded portion of anchor bolts shall be lubricated within 24 hours of tightening; approved lubricant shall be used and shall be applied in accordance with lubricant manufacturers recommendations.
3. The bottom of leveling nuts shall be less than 1 ¾ in. from the foundation (unless stated otherwise on the plans).
4. While holding the leveling nuts with a wrench, the top nuts shall be snug tightened (brought into full contact with the base plate). Then the leveling nuts shall be snug-tightened. Then the top nuts and base plate shall be marked and the nuts further tightened (pre-tensioned) by a minimum 1/6 turn.
5. No sooner than 10 minutes after the installation of the truss on the end bents, top and leveling nuts shall be retightened as needed.
6. All tightening shall be done in the order shown.

INTERIOR WALKWAY GRATING PLAN

NOTES:

1. Interior walkway gratings shall be extruded I-bars 2 in. x ¼ in. x 1 3/16 in. center-to-center. Cross bars shall have a maximum gap of 4 in. Moment of Inertia, I_x = 1.382 in^4. A different grating of equal strength may be used upon approval by the engineer.

(2) Walkway grating width is nominal and may vary ±1/2 in. based on available standard widths.

(3) Interior walkway gratings can be spliced on center of any horizontal truss member as needed. See Standard Drawing E 802-SBTS-19 for typical interior walkway grating splice detail.

4. Interior walkway grating shall run the full length, center-to-center, of end-support truss members plus 9 in. at each end.

(5) Drain holes shall be as detailed on Standard Drawing E 802-SBTS-23, including placement on the horizontal handrail pipes.

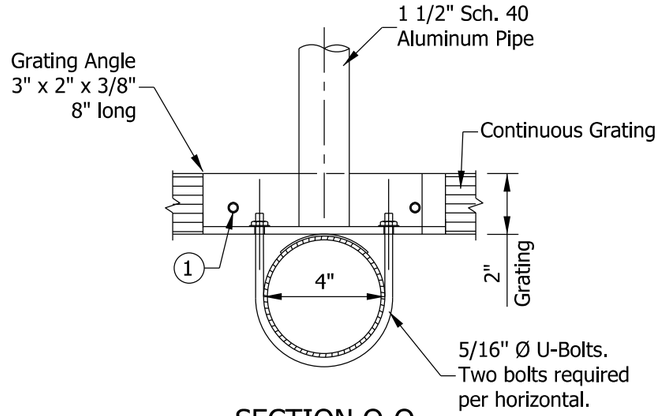
GRATNG SUPPORT DETAIL



SECTION O-O

NOTES:

1. Drilling of holes in grating may be done in shop or field, based on Contractor's preference and subject to and shall provide accurate alignment.
2. Shims may be placed as shown, if needed to compensate for alignment variations between horizontal and diagonal pipes beyond adjustment provided by angles. Thicker shims may be used subject to shims performing properly.
3. Tube-to-grating gap may vary from 0 to ½ in. max. to align walkway, allow for camber.

1. If necessary, the top bottom plate shall be ground to fully seat lower chord plate. Any damages galvanizing shall be repaired before assembly.
2. Pipe shall be oriented towards sign. Hole diameter in column shall equal outside pipe diameter + ⅛ in.
3. After tightening lower connection bolts, gap shall be filled with non-hardening silicone caulk suitable for exterior exposure.

NOTES:

1. After galvanizing, collar inside diameter shall equal outside diameter of galvanized column plus ⅛ in. ±1/16 in. Maximum gap between column and collar shall be ⅛ in. before tightening bolts.
2. Optional full penetration weld in collar may be made at two locations, 180° apart. X-ray or ultrasonic test (UT) 100%.
3. See Standard Drawing E 802-SCLS-08 for dimensions and member sizes.

20"	3'-2"	2'-5"	2'-9"
24"	3'-6"	2'-9"	3'-1"

NOTES:

(1) Minimum length which shall be galvanized. Entire bolt may be galvanized at contractor's option.

(2) Uncoated nut shall be provided at bottom of anchor plate. Thread shall be deformed or a chemical thread locked used to secure.

(3) A ¼ in. x H minimum continuous backer ring shall be used. Tack weld shall be done in the root area of the final weld. See Backer Ring Table for dimension H.

(4) Anchor bolt nuts shall be tightened in the order 1-8 against the base plate by turning the nut a minimum of 1/6 turn from snug tight condition shown in plan view. Lubricant shall be from INDOT's Qualified Products List.

(5) See Standard Drawings E 802-SCLS-03 and 08 for column wall thickness.

(6) UT - Ultrasonic Testing, 25% of entire column to base plate weld. MT - Magnetic Particle Testing, 25% or 1 side of 4 stiffeners.

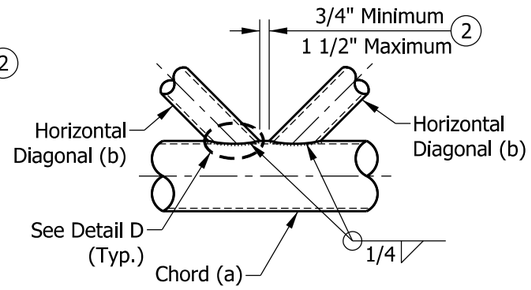
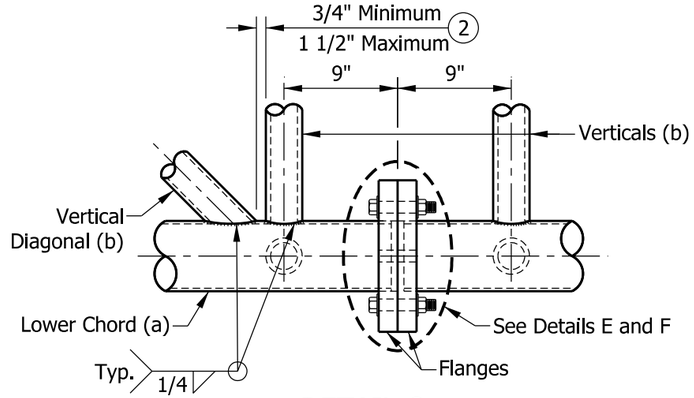
DETAIL A



DETAIL B



DETAIL C

NOTES:

(1) See Standard Drawings E 802-SCSB-04 and -05 for upper and lower chords connection details.

(2) Diagonals shall be detailed for minimum offset from the panel point based on the following: Offset shall be such as to provide a 3/4" minimum to 1 1/2" maximum clearance between any diagonal and any vertical member, and to provide clearance for U-bolt connections of signs.

3. Splicing flanges shall be attached to each arm unit with the arm shop-assembled to camber shown. Arm units shall be in proper alignment and flange surfaces shall be shop-bolted into full contact before welding. Sufficient external welds or tacks shall be made to secure flanges until remaining welds are made after disassembly. Adjacent flanges shall be "match marked" to insure proper field assembly.

(4) Toe edge of diagonal member shall be cut back to facilitate throat thickness per AWS D1.1, Figure 3.2.

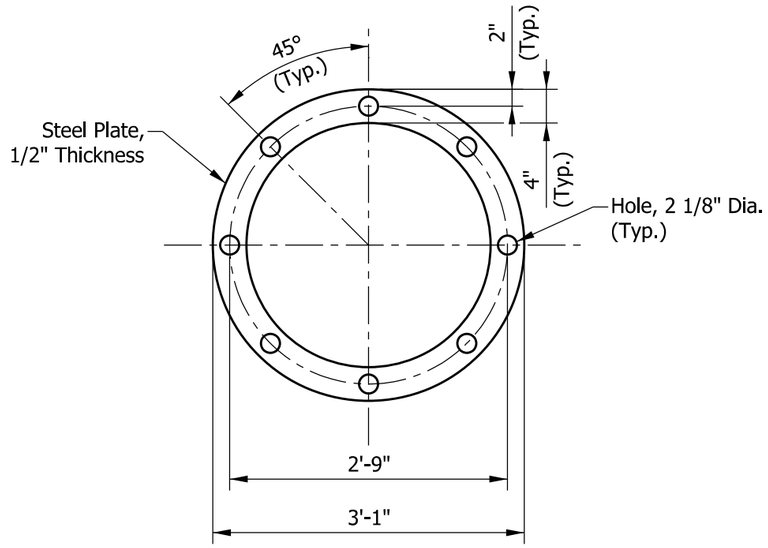
PLAN



ANCHOR AND POSITIONING PLATE

NOTES:

1. Utilize temporary positioning plate and leveling nuts or other engineer-approved methods to maintain anchor bolt alignment during concrete placement. Positioning plate and associated nuts shall be removed upon completion of the foundation.
2. Protect threads during concreting with tape, sleeves, or other means.
3. 1'-6" is the minimum length which shall be galvanized. Entire bolt may be galvanized at contractor's option.
4. Provide uncoated nut at bottom of anchor plate. Deform thread or use chemical thread lock to secure.
5. Use continuous backer ring, 1/4" x 1" minimum. Tack weld only in root area of final weld.
6. Anchor bolt nuts shall be tightened against the base plate by turning the nut a minimum of 1/6 turn from snug tight condition.
7. UT - Ultrasonic Testing, 25% of entire column to base plate weld.
   MT - Magnetic Particle Testing, 25% or 1 side of 4 stiffeners.

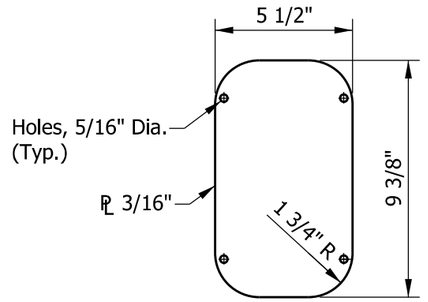
HANDHOLE FRAME



HANDHOLE COVER

NOTES:

1. In lieu of fabricated handhole frame as shown, frame may be cut from 2" plate with rolling direction vertical.
2. See Standard Drawing E 802-SNWR-03 for grounding post details. Grounding post shall be placed on far side of support directly opposite center of handhole.
3. See Standard Drawing E 802-SCSB-02 for handhole location.
4. I.D. tag is a 1/8" stainless steel plate with the following information stamped in 1/2" black letters:

   Manufacturer _____, Drawing/Order #_____
   Contract #_____, Structure Type _____
   Fabrication Date _____, Arm Length _____
   Pole Mounting Height _____

SECTION A-A

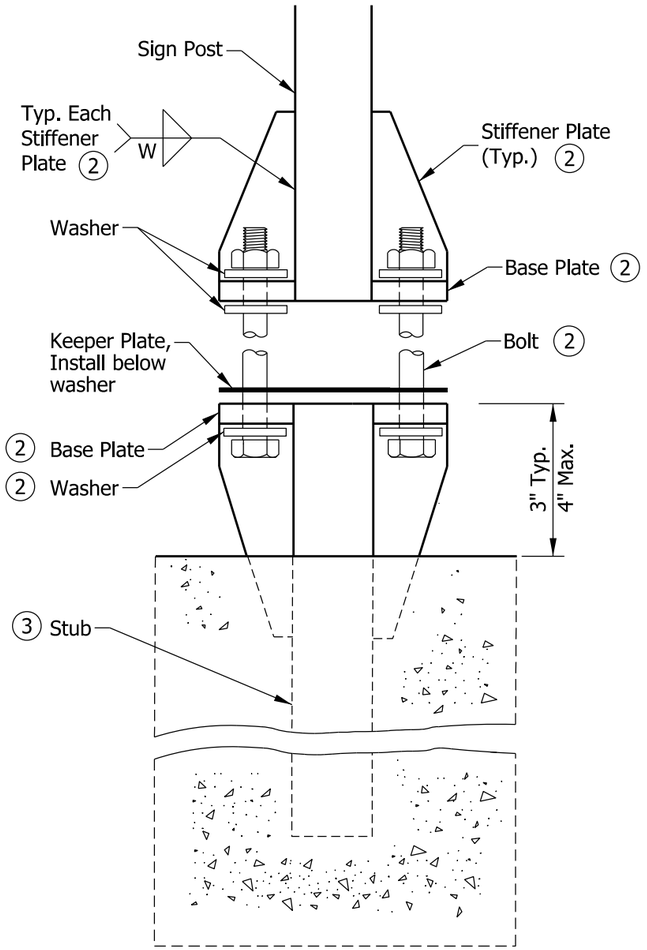
FRONT ELEVATION



SIDE ELEVATION

NOTES:

1. Stubs shall be plumb and base plate shall be leveled and physically held level until the concrete sets.

(2) See Standard Drawing E 802-SNGP-04 for base plate and stiffener plate details, including weld thickness and bolt diameter.

(3) See Foundation Data table on Standard Drawing E 802-SNGP-16 for stub length and foundation dimensions.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

A. The contractor shall bolt post to stub. One flat washer on each bolt shall be placed between the top of the keeper plate and bottom of the top base plate. Shim as required to plumb post.

B. All bolts shall be tightened in accordance to 711.65(d).

C. Threads at junction with nuts shall be burred using a center punch to prevent nut loosening.

9	Steel Sign Posts, Anchor Base Details
10	Sign Identification Marking

GENERAL NOTES:

1. Characters sometimes cannot be accommodated within the space available on guide signs. For this situation, the standard series D characters may be reduced to series C. As a second choice, use the next smaller height commonly available.

2. For independent use of sheet signs, a nylon and metal washer shall be placed between each bolt head and the face of the metal sign. See Sign Bolt Detail on Standard Drawing E 802-SNGS-06.

3. Fabrication details for the signs shown shall be found in the Standard Highway Signs and Markings Book. Shop drawings will be supplied on all other signs not found in the publication.

4. See Standard Drawing E 802-SNPL-02 for mounting height and lateral locations of signs.

5. Splicing of flanged channel post will not be permitted.

6. Wherever white is specified as a color, it is understood to include silver-colored reflecting coatings or elements the reflect white light.

SHOULDER SECTION

DELINEATOR DETAILS (2)

NOTES:

(1) Reference markers shall be installed in accordance with MUTCD.

(2) Delineators shall be selected from the INDOT Qualified Products List.

3. Signs shall be fastened to the posts with bolts, metal and nylon washers and locknut. The nylon washer and the metal washer shall be placed between each bolt head and the face of the sign.

4. Nut shall be tightened sufficiently so that the sign is firmly against the post. However, there shall be no deformation of aluminum sheeting or twisting or damage to the reflective sheeting.

5. Bolt can either be stainless steel or galvanized steel bolt.

CHIEF ENGINEER DATE

NOTES:

1. Height of lettering shall be 1/8" to 1/4". The height of the dates along the bottom shall be 1/2".
2. Copy shall be black on reflectorized white background.
3. The number of dates along the bottom need not be five, and the first date need not be 25. However, the installation year shall be shown.
4. The overlay number is to be of colored transparent sheeting to indicate the last two digits of the year of installation.

(5) The decade of installation shall be indicated by color of transparent sheeting:

2020 - 2029 Brown
2030 - 2039 Orange

TYPE OF ROADWAY CLEARANCE	INTERSTATE AND DIVIDED HIGHWAY WITH SHOULDER, RURAL & URBAN	DIVIDED HIGHWAY WITH CURB, RURAL & URBAN	NON-DIVIDED HIGHWAY, RURAL OR CITY STREET	NON-DIVIDED HIGHWAY, URBAN
VERTICAL: EDGE OF TRAVELED WAY PAVEMENT TO BOTTOM OF SIGN OR SIGNS	7 ft TO 7.5 ft (1)	7 ft TO 7.5 ft (2)	5 ft (2) TO 5.5 ft (4)	7 ft TO 7.5 ft (2)
HORIZONTAL: EDGE OF TRAVELED WAY PAVEMENT TO EDGE OF SIGN OR SIGNS	12 ft min. or 6 ft min. from the shoulder, whichever is greater	6 ft min. (3)	12 ft min. or 6 ft min. from the shoulder, whichever is greater	12 ft min. or 6 ft min. from the shoulder, whichever is greater (3)

NOTES:

(1) If a secondary sign is mounted below another sign, the secondary sign shall be installed at least 5 ft above the level of the pavement edge.

(2) The height to the bottom of a secondary sign mounted below another sign may be 1 ft less than the height specified above.

(3) In urban areas where lateral offsets are limited, a minimum later offset of 2 ft may be used. A minimum offset of 1 ft from the face of the curb may be used in urban areas where sidewalk width is limited or where existing poles are close to the curb.

(4) Where parking, sidewalk, or pedestrian movements are present, the clearance to the bottom of the sign shall be at least 7 ft.

NOTES:

1. Tri-chord truss structures are for various maximum sign areas and span lengths. See Standard Drawings E 802-TCSS-04 through -06 for panel dimensions, member sizes, and camber.
2. Maximum deviation of any chord from a straight line in any section shall be less than 1/8". Maximum horizontal deviation over the entrie length of the tri-chord truss shall be less than 3/8" from a straight line.
3. See Standard Drawings E 802-TCSS-07 and -08 for connection and welding details.
4. See Standard Drawing E 802-TCSS-12 for base plate, anchor bolt, and I.D. tag details.
5. See Standard Drawing E 802-TCSS-11 for sign attachment details.
6. See Standard Drawing E 802-TCSS-09 for chord flange details.
7. Maximum mounting height is 23'-0".

ANCHOR BOLT DETAIL

NOTES:

1. Utilize temporary positioning plate and leveling nuts or other Engineer-approved methods to maintain anchor bolt alignment during concrete placement. Positioning plate and associated nuts shall be removed upon completion of the foundation.
2. Protect threads during concreting with tape, sleeves, or other means.
3. 1'-6" is minimum to be galvanized. Entire bolt may be galvanized at Contractor's option.
4. Provide uncoated nut at bottom of anchor plate. Deform thread or use chemical thread lock to secure.
5. Use 1/4" x 1" minimum continuous backer ring. Tack weld only in root area of final weld. See Detail G this page for base plate weld detail.
6. Anchor bolt nuts shall be tightened against the base plate by turning the nut 1/6 turn (minimum) from snug tight condition.
7. See Standard Drawing E 802-TCSS-06 for column wall thickness.
8. I.D. tag is a 1/8" stainless steel plate with the following information stamped in 1/2" black letters:

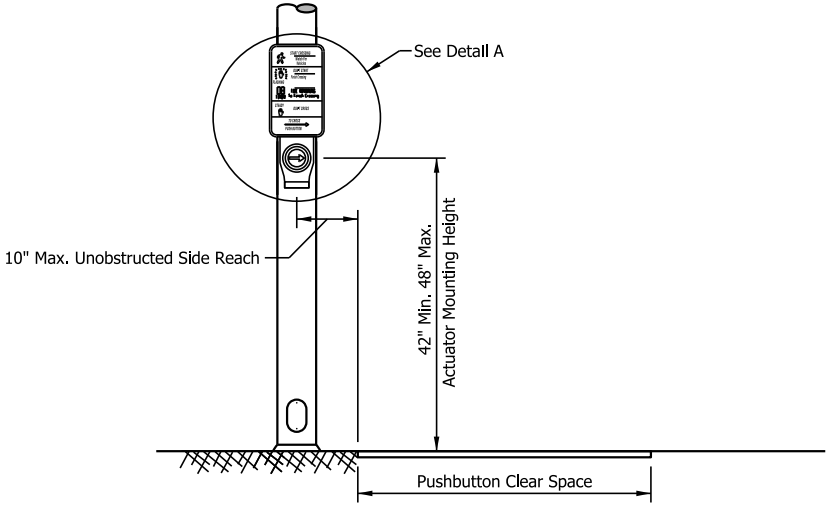
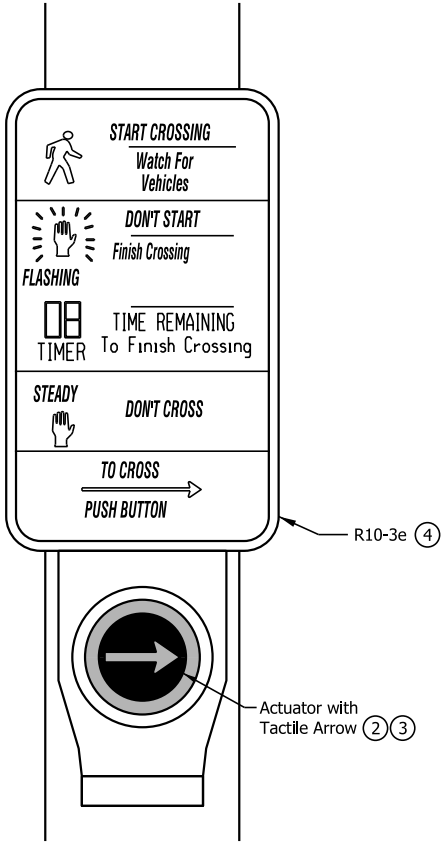
APPROACH TO PEDESTRIAN PUSHBUTTON ASSEMBLY MOUNTING



APPROACH TO PEDESTRIAN PUSHBUTTON ASSEMBLY MOUNTING



DETAIL A

NOTES:

1. The face of a pedestrian pushbutton assembly shall be aligned parallel to the direction of pedestrian travel on the associated crosswalk.
2. The actuator shall be a 2-in. minimum diameter and the color shall contrast with the housing or mounting. The actuator for an accessible pedestrian signal shall vibrate during the walk interval.
3. For an accessible pedestrian signal, a tactile arrow shall be provided. The tactile arrow can be part of the actuator or can be directly above or below the actuator. The tactile arrow color shall contrast with the background.
4. Pedestrian signal signs applicable to pedestrian actuation shall be mounted immediately above or incorporated into the pedestrian pushbutton assembly. For an extended actuator press function, the R10-32P sign shall be mounted adjacent to or integral with the pedestrian pushbutton assembly.
5. Where pole placement is limited, a 6 in. or 12 in. pushbutton assembly extension may be used to meet the side reach requirements.
6. See Standard Drawing E 805-PPBA-02 and -03 for Typical Pedestrian Pushbutton Assembly Locations.

NOTES:

1. Where two pedestrian pushbutton assemblies are provided on the same corner or median, the pedestrain pushbutton assemblies should be separated by at least 10 ft. Where constraints prevent a 10 ft separation, pedestrian pushbutton assemblies may be placed closer together or on the same pole. Where accessible pedestrian signal pushbutton assemblies are closer than 10 ft, the assemblies shall be in accordance with IMUTCD 4E.10.
2. A 4-ft minimum sidewalk clear width shall be provided where a pedestrian pushbutton assembly is placed within a sidewalk. A pedestrian pushbutton assembly should be adjacent a pushbutton clear space.
3. A pedestrian pushbutton assembly should be centered and adjacent a pushbutton clear space.
4. A pushbutton clear space shall have minimum clear dimension of 4 ft x 4 ft.
5. A pedestrian pushbutton assembly should not be placed more than 5 ft outside the crosswalk.
6. A pedestrian pushbutton assembly should not be placed adjacent a ramp with a running slope greater than 2%.
7. The distance from the nearest face of a pedestrian pushbutton assembly to face of the curb or edge of pavement should be between 1.5 ft and 6 ft and should not be greater than 10 ft.
8. The distance from the nearest face of a pedestrain pushbutton assembly to a grade break should not be less than 1.5 ft.
9. See Standard Drawing E 805-PPBA-01 for Pedestrian Pushbutton Assembly Details.

POLE DIMENSIONS (6)		
CANTILEVER ARM LENGTHS L (FT)	BASE DIAMETER (IN.)	WALL THICKNESS (IN.)
15' to 35'	18	5/16
> 35' to 45'	24	5/16

NOTES:

(1) This structure is a dual arm cantilever design for traffic signals. Cantilever arms can be positioned at 20° to 180° to each other.

(2) See Standard Drawing E 805-SDAC-06 for handhole and I.D. tag details.

3. See Standard Drawings E 805-SGGR-01 through -03 for grounding details.

(4) See Standard Drawings E 805-SDAC-08 and -09 for foundation details.

(5) A minimum of 25% of the pole to base plate welds shall be ultransonically tested (UT).

(6) Pole and arms may be octagonal or circular shaped and shall have a 0.14 in./ft taper. All member diameters shown are outside diameter.

(7) See Standard Drawing E 805-SDAC-04 for base plate details.

(8) See Standard Drawing E 805-SDAC-05 for arm connection details.

30	14	5/16	15	A, B
35	14	5/16	17 1/2	A, B, C
40	17	5/16	20	A, B, C
45	17	5/16	22 1/2	A, B, C

NOTES:

(1) Upper signal arm can be oriented 20° to 180° from lower signal arm. The dimensions and details shall be as shown on this drawing.

(2) Optional splices can be used for greater than 40' mast arms. The splice shall be located a minimum of 30' from the pole. The end extension section of the arm shall have a wall thickness of 3/16" or greater. Field assembly to achieve a snug tight joint (min. overlap not less than 3 times the inside radius ofthe end section).

(3) Arm rise is measured in the undeflected position without vertical loads on the arm.

(4) See Standard Drawing E 805-SDAC-06 for handhole B details.

5. See Standard Drawing E 805-SDAC-07 for loading diagrams.

(6) If seam welds are used, the weld location shall be along the bottom for the arms, and on the side of pole as shown. All pole and arm seam welds shall be 100% ultrasonically tested.

7. Number of cable inlets depends on arm L (see table on this sheet). The inlet diameter shall be 1 3/4" with rubber grommet (typ.).

NOTES:

1. The Type E foundations are to be used for 35' dual arm structures and cohesive soil with minimum Q_u = 750 lb/ft or sand with minimum friction angle 30°.
2. A tooled line or other permanent marking shall be provided on the top of the foundation to indicate the direction of the conduits' exit ends.
3. 2 1/2" minimum clearance to weld at pole. Anchor bolt circle shall allow clearance for the anchor bolt washers. Cutting or trimming of the washers will not be allowed.
4. The foundation shall be poured monolithically and shall have no construction joint.
5. See Standard Drawing E 805-SDAC-04 for base plate details.

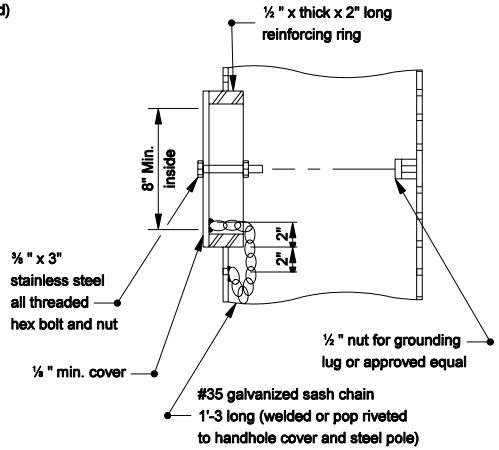
HANDHOLE AND GROUNDING LUG



GENERAL NOTES:

1. Taper pole 0.14 in. per foot of length.
2. Band position can be variable depending of minimum clearance requirement of tether the cable over the road, and the elevation of the top of the foundation relative to the top of the traveled roadway.
3. Design load of 8000 lb applied perpendicular to pole axis 1'-6 from top of pole.

POLE BAND POSITION			
POLE LENGTH	A	B	C
30 ft	6"	8'-0	12'-0
36 ft	1'-0	13'-0	17'-0

ELEVATION

NOTES:

1. Number of cable inlets depends on arm L (See Arm Dimensions Table). The inlet diameter shall be 1 3/4" with rubber grommet (Typ.)
2. Optional splice can be used for arm length of greater than 40'. Field assembly shall achieve a snug tight joint, with minimum overlap not less than 1.5 times the inside dimension of the end section.
3. Arm rise R is measured in the undeflected position without vertical loads on the arm.
4. See Standard Drawings E 805-TSCS-07 and -08 for placement of signal and signs for each arm length.
5. If seam welds are used, the weld location for the arms shall be along the bottom, and on the side of pole as shown.

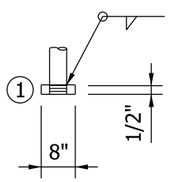
ANCHOR BOLT D DETAIL



NOTES:

1. Alternate 8" x 8" x 1/2" square plate tapped and welded to anchor bolt may be substituted for the bent anchor bolt.
2. Minimum H required is 4 ft. soil cover over the entire footing area.
3. Bolt circle, B, shall allow clearance for the plate washer. Cutting or trimming the washer will not be allowed.
4. See Standard Drawing E 805-TSCS-17 for metal skirt details.
5. See Standard Drawing E 805-TSCS-04 for base plate B details.
6. A tooled line or other type of permanent marking shall be provided on the top of the foundation to indicate the direction of the conduits.

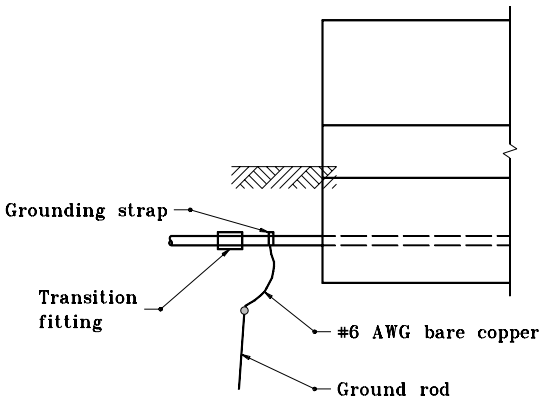
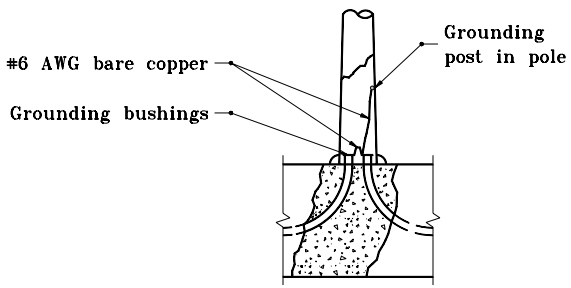
DETAIL OF COIL





BRIDGE GROUNDING

GENERAL NOTES

① The 6 ft approach to foundation shall be trenched.

2. Bottom of trench shall be graded so as to provided a smooth, uniform ramp to the entry sleeve of the foundation.

3. Each cable–duct shall have its own entry sleeve. There shall be at least two entry sleeves per footing.

4. Coil to be of #6 AWG copper approximately 15 ft long.

5. Place felt between concrete and coil to prevent bonding.

6. Coil method of grounding may be used with precast foundation.

GENERAL NOTES

1. Shop drawings shall be submitted on lightning rod and connection details. Drawings are for informational purposes only. Only one lightning rod is required per structure.

(2) Grounding rod must be located a min. of 6 ft from base at a min. of 2 ft below grade.

For bonding plate detail, see Standard Drawing No. E 807-LTLR-02.

NOTES

1. Standard Drawings E 807-LTFD-02 through -04 represent the maximum roadside slope normally encountered without guardrail protection. If motorists are protected from the light standard by guardrail, the treatments found herein are not required. These drawings indicate the maximum slopes permissible on the fill. Any conditions more severe than those represented here shall be graded as directed.
2. See Standard Drawing E 807-LTST-02 for mounting heights and dimensions of corresponding components.
3. The front of the foundation shall face the roadway and the back shall face the right-of-way line.

INDEX	
SHEET NO.	SUBJECT
1	Narrow Bridge Markings, Index and General Notes
2	Narrow Bridge Markings on Two Lane Road
3	Narrow Bridge Markings at One Lane Bridge
4	Narrow Bridge Markings on Divided Highway

GENERAL NOTES:

1. No passing zone signs shall be used if AADT is greater than 750 or the posted speed limit is 50 mph or greater.
2. A bridge or culvert, with a clear roadway of 18 ft to 22 ft inclusive, or where the bridge railing or other vertical surface is less than 2 ft from the edge of pavement, will be considered a narrow bridge. The W5-2 sign shall be installed for this condition.
4. A bridge or culvert with less than 18 ft between opposite vertical surfaces will be considered a one lane bridge. The W5-3 sign shall be installed for this condition.
5. Delineators shall be used if the AADT is greater than 500 at a narrow bridge or if the AADT is greater than 250 at a one lane bridge.
6. Linear delineation systems may be used on barrier wall or guardrail instead of spacing other delineator types at 50 ft intervals.
7. If specified, D1 delineators shall be used in place of flexible delineators in advance of the narrow bridge and D3 delineators shall be used in place of flexible delineators on the approach segments with guardrail. The three acrylic plastic delineators on each D3 delineator shall be spaced 5 in. apart, center-to-center.

6	Six Lane Weigh-in-Motion (WIM) Stations
7	Four Lane Virtual Weigh-in-Motion (VWIM) Stations
8	Six Lane Virtual Weigh-in-Motion (VWIM) Stations

GENERAL NOTES:

1. Road surface pavement condition shall meet ASTM E 1318 requirements.
2. Pavement shall be free of bumps or transitions for at least 200 ft before and at least 100 ft after the automated traffic count station
3. Pavement on either side of any sensor shall be free of joints and cracks for at least 2 ft.
4. The Contractor shall contact the ITS Engineering Division for approval before installing at any location where the conditions in notes 1, 2, or 3 above are not met.
5. If the median is paved and has a concrete crash barrier, each inside shoulder shall have one communications handhole and one power handhole.
6. All conduits shall include one tracer wire #14 gauge or larger.
7. Conduits shall be schedule 80 PVC unless otherwise specified and under-bored when crossing the roadway.
8. Electric power wires shall have dedicated separate conduits and shall not run in conduits with sensor or communication wires.
9. See Standard Drawing E 809-ICCF series for additional cabinet details.
10. Cables shall be protected by PVC sleeves where they cross pavement joints or cracks.
11. Direct 120/240VAC, 60Hz power shall be delivered to the following components: ATR Cabinet
12. Wire splices shall not be used with electric power wires nor with piezoelectric, temperature, or axle weight sensor wires.
13. Inductive loop wires shall be spliced to the lead-in wires and sealed for waterproofing in the detector housing.
14. Cables crossing the pavement or shoulder transition shall cross perpendicular to the joint and continue for at least 6 ft before making a turn.

- Z — 3 in. Conduit with 6 Loop Leads, 6 Axle Leads and 1 Pull Line

LEGEND

- Temperature Sensor
- Detector Housing
- Round Inductive Loop (6' Diameter)
- Communications Handhole
- Power Handhole (120/240VAC)
- Axle Weight Sensor (5.74' in length)
- Direction of Traffic Arrow
- Upstream Pavement Conditions: See General Notes
- Downstream Pavement Conditions: See General Notes
- Remote Disconnect
- Cabinet and Concrete Base

INDIANA DEPARTMENT OF TRANSPORTATION

SIX LANE WEIGH-IN-MOTION (WIM) STATIONS

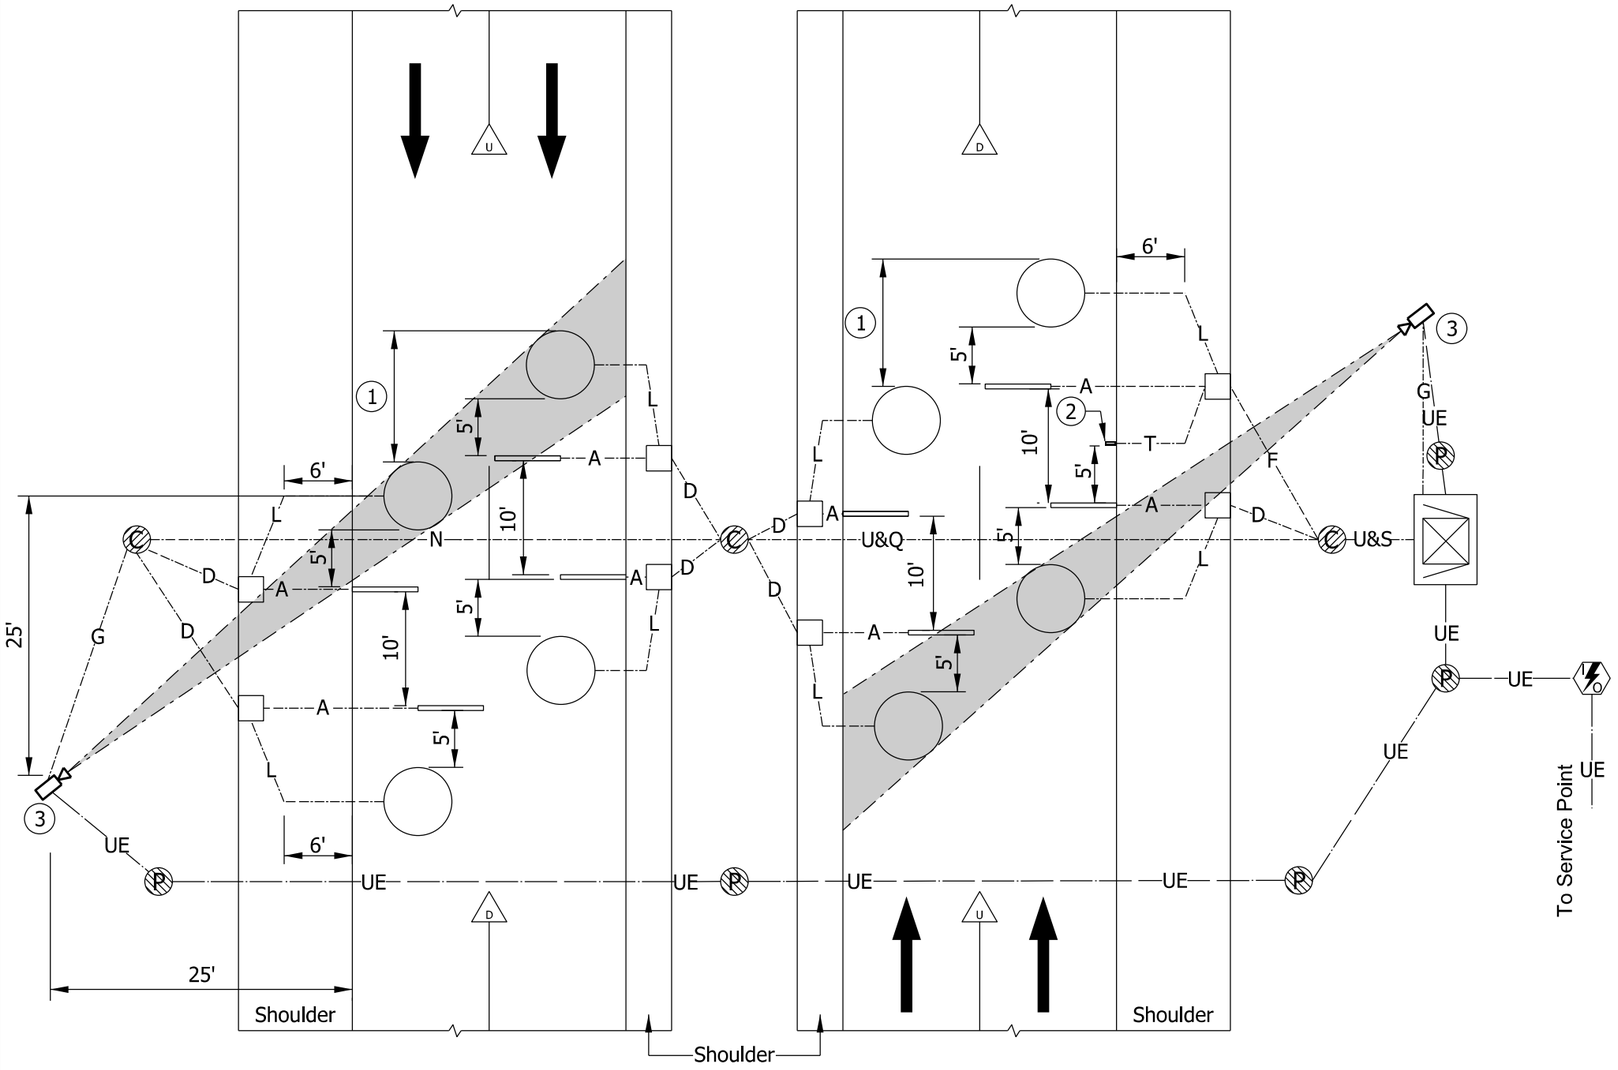
SEPTEMBER 2023

STANDARD DRAWING NO. E 809-ITCS-06

DAVID H. BORUFF REGISTERED No. 60900348 STATE OF INDIANA PROFESSIONAL ENGINEER

DESIGN STANDARDS ENGINEER — DATE 05/04/23

CHIEF ENGINEER — DATE 05/12/2023



NOTES:

1. The offset of the axle sensors from one lane to the next shall be 11.5 ft or as directed by the Engineer.
2. Temperature sensor
3. Cameras shall be aligned with the leading edge of all upstream loops in a travel direction.

CONDUIT KEY:

– – –A– – –	Axle Sensor Lead
– – –D– – –	2 in. Conduit with 1 Loop Lead and 1 Axle Lead
– – –F– – –	2 in. Conduit with 1 Loop Lead, 1 Axle Lead, and 1 Temperature Lead
– – –G– – –	2 in. Conduit with 2 Cat6a Camera Leads and 1 Pull Line
– – –L– – –	Loop Lead
– – –N– – –	3 in. Conduit with 2 Loop Leads, 2 Axle Leads, 2 Cat6a Camera Leads, and 1 Pull Line
– – –Q– – –	3 in. Conduit with 2 Loop Leads, 2 Axle Leads, and 1 Pull Line
– – –S– – –	3 in. Conduit with 4 Loop Leads, 4 Axle Leads, 1 Temperature Lead, and 1 Pull Line
– – –T– – –	Temperature Sensor Lead
– – –UE– – –	Electric Conduit 120 / 240 VAC
– – –U– – –	3 in. Conduit with 4 Loop Leads, 4 Axle Leads, 2 Cat6a Camera Leads, and 1 Pull Line
– · – · – · –	Camera Line of Sight

LEGEND

- Temperature Sensor
- Detector Housing
- Round Inductive Loop (6' Diameter)
- Communications Handhole
- Power Handhole (120/240VAC)
- Axle Weight Sensor (5.74' in length)
- Pole-mounted side view camera with IR illuminators
- Upstream Pavement Conditions: See General Notes
- Downstream Pavement Conditions: See General Notes
- Remote Disconnect
- Direction of Traffic Arrow
- Cabinet and Concrete Base
