PROPOSAL TO STANDARDS COMMITTEE

PROBLEM(S) ENCOUNTERED: RSP 805-T-085 for signal bulb replacement, aerial inspection, and loop replacement as well as RSP 805-T-086 for traffic signal maintenance repair has become outdated. It includes information on incandescent signal bulb wattages and maintenance of traffic specs that are not compliant with the MUTCD depending on the location or duration of the work. In addition, the RSP is no longer necessary as signal maintenance contracts are infrequent and referring to the Standard Specifications with unique special provisions, if necessary, is sufficient.

PROPOSED SOLUTION: Rescind RSP 805-T-085 and RSP 805-T-086.

SECTION 303 – AGGREGATE PAVEMENTS OR SHOULDERS

303.09 Method of Measurement

SECTION 904 – AGGREGATES

904.01 Aggregates

(Note: Proposed changes shown highlighted gray)

The Standard Specifications are revised as follows:

SECTION 303, BEGIN LINE 65, INSERT AS FOLLOWS:

303.09 Method of Measurement

Compacted aggregate will be measured by the ton in accordance with 109.01(b) for the type specified. *If ACBF, GBF, or SF aggregates are used, an adjustment in weight will be made for each pay item that is 500 t or greater to compensate for the difference in specific gravity of slag compared to natural aggregate. The measured quantity will be adjusted in accordance with 904.01 to determine the pay quantity.* Geosynthetics will be measured in accordance with 214.05.

SECTION 904, BEGIN LINE 3, DELETE AS FOLLOWS:

904.01 Aggregates

Aggregates shall consist of natural or manufactured materials produced from but not limited to limestone, dolomite, gravels, sandstones, ~~steel furnace slag~~, SF, ~~air-cooled blast furnace slag~~, ACBF, ~~granulated blast furnace~~, GBF, wet bottom boiler slag, or other geologic rock types approved by the Engineer.

SECTION 904, BEGIN LINE 24, DELETE AND INSERT AS FOLLOWS:

Aggregates, except those used for precast concrete units or fine aggregates used for snow and ice abrasive, shall be supplied by a Certified Aggregate Producer in accordance with 917. Structure backfill may be obtained from a non-CAPP source in accordance with 211.02. SF for SMA mixtures ~~shall~~ will also require the following:

SECTION 904, BEGIN LINE 76, INSERT AS FOLLOWS:

When slag is furnished as an aggregate, the approximate quantity of tons to be supplied will be determined by multiplying the pay item quantity of tons by the specific gravity of slag divided by 2.6. The adjusted contract *pay* quantities will be determined by multiplying the accepted quantity of tons by 2.6 divided by the specific gravity of the slag.

REVISION TO STANDARD SPECIFICATIONS

SECTION 410 – QC/QA HMA – SMA PAVEMENT
410.06 Recycled Materials
410.20 Contractor Disputing Acceptance Test Results

(Note: Proposed changes shown highlighted gray)

The Standard Specifications are revised as follows:

SECTION 410, AFTER LINE 142, INSERT AS FOLLOWS:

The recycled material percentages shall be specified on the DMF. SMA mixtures utilizing recycled materials shall be limited to 25.0% binder replacement, computed as follows:

$$\text{Binder Replacement, \%} = \frac{(A \times B)}{C}$$

where:

*A = RAP, % Binder Content by Mass of RAP
B = RAP, % by Total Mass of Mixture
C = Total, % Binder Content by Total Mass of Mixture.*

The combined aggregate properties shall be in accordance with 904. The combined aggregate bulk specific gravity shall be determined in accordance with ITM 584 and the combined aggregate gradation shall be in accordance with 410.05 for the SMA mixture specified.

SECTION 410, BEGIN LINE 416, DELETE AND INSERT AS FOLLOWS:

Cores for density determination shall be in accordance with ~~401.16~~410.16 and ~~401.20~~410.20 and shall not be taken within 12 in. of either the confined edge or the non-confined edge of the course placed where VRAM has been applied.

SECTION 410, BEGIN LINE 429, DELETE AS FOLLOWS:

Density acceptance for all SMA mixtures shall be based on cores cut from the compacted pavement and analysis of pavement samples obtained in accordance with ITM 580. ~~Acceptance will be based on lots and sublots in accordance with 410.07.~~ The Engineer will randomly select two locations in accordance with ITM 802, within each subplot for coring. The transverse core location will be located so that the edge of the core will be no closer than 3 in. from a confined edge or 6 in. from a non-confined edge of the course being placed. The maximum specific gravity will be determined from the sample obtained in 410.09.

SECTION 410, BEGIN LINE 468, DELETE AS FOLLOWS:

Samples for the bulk specific gravity and maximum specific gravity will be dried in accordance with ITM 572. The Engineer will determine the bulk specific gravity of the cores in accordance with AASHTO T 166, Method A or AASHTO T 331, if required. The maximum specific gravity will be mass determined in water in accordance with AASHTO T 209. ~~The target value for density of SMA mixtures of each subplot shall be 93.0%.~~

SECTION 410, BEGIN LINE 548, DELETE AND INSERT AS FOLLOWS:

(b) Density

REVISION TO STANDARD SPECIFICATIONS

SECTION 410 – QC/QA HMA – SMA PAVEMENT
 410.06 Recycled Materials
 410.20 Contractor Disputing Acceptance Test Results

When the density of the lot is outside the allowable tolerances, adjustment points for the lot density will be assessed as follows:

<i>AVERAGE DENSITY</i>	
Percentages are based on %MSG	Pay Adjustments, %**
> 97.0 98.0	Submitted to the Division of Materials and Tests*
97.6 – 97.9	0.00
96.1 – 97.5	-2.0 + 0.10 points for each 0.10% density above 96.0
95.0 – 96.0	-2.0 adjustment points
93.0 – 97.0 94.9	0.00 -2.0 + 0.10 points for each 0.10% density below 95.0
92.0 – 92.9	0.20 points for each 0.10% below 93.0
91.0 – 91.9	2.00 + 0.40 points for each 0.10% below 92.0
89.0 – 90.9	6.00 + 1.00 points for each 0.10% below 91.0
\leq 89.0	Submitted to the Division of Materials and Tests*
* Test results will be considered and a determination rendered as a failed material in accordance with 105.03. ** If any single subplot average density value is less than 91.0, the pay adjustment will not be assessed lower than 0.00.	

SECTION 410, BEGIN LINE 576, DELETE AND INSERT AS FOLLOWS:

(b) Binder Content and Gradation

The backup sample for binder content and gradation will be prepared and tested in accordance with the test methods that were used for acceptance.

(Note: Proposed changes shown highlighted gray)

The Standard Specifications are revised as follows:

SECTION 716, BEGIN LINE 101, INSERT AS FOLLOWS:

Steel pipe used as a carrier pipe shall have the following minimum wall thickness shown in the table below. *The Department will consider carrier pipes with outside diameters larger than those listed in the table below provided the Contractor supplies a recommended outside diameter and wall thickness that has been designed by, signed by, and bears the seal of a professional engineer.* Steel pipe used as a casing pipe, but not used as a carrier pipe, shall be selected by the Contractor to have minimum wall thickness sufficient to resist jacking forces. For installations where the casing is not used as a carrier but only as a casing for a carrier pipe, the thickness of the casing shall be determined by the Contractor.
