

Mike Braun, Governor
State of Indiana

Indiana Family and Social Services Administration

402 W. WASHINGTON ST., ROOM W451, MS27
INDIANAPOLIS, IN 46204-2744

July 23, 2025

The Monthly Medicaid Financial Report for April 2025 was released today.

Note to Readers

The forecasted monthly Medicaid expenditures, enrollment and funding are based on the April 2025 Medicaid forecast, which considered data through January 2025. Information on the latest forecast is available [here](#).

State Fiscal Year 2025 began on July 1, 2024, and ends on June 30, 2025.

Results and Commentary

Enrollment

- As of April 2025, Medicaid enrollment across all programs and delivery systems totaled 1,946,326 individuals, which is 85,917 (4.2%) below the forecasted amount. Compared to the actual enrollment in April 2024 of 1,990,822, enrollment is down 44,496. Year-to-date average monthly enrollment is 98,874 (4.7%) below the average monthly enrollment year-to-date in April 2024. Average monthly enrollment year-to-date (YTD) for SFY 2024 through April was 2,103,451.
- With the launch of the managed Long-Term Services and Supports (mLTSS) program Indiana PathWays for Aging on July 1, 2024, enrollment of 116,785 individuals shifted from Medicaid fee-for-service and Hoosier Care Connect to the new PathWays managed care program. The current YTD average monthly enrollment for PathWays through April 2025 is 117,039.

Expenditures

- Medicaid expenditures YTD through April totaled \$16.6B, which is \$92.5M (0.6%) below the estimated amount in the April 2025 Medicaid forecast and \$19.1M (0.1%) below expenditures YTD in April 2024.
- Managed care expenditures are based on capitated per-member-per-month (PMPM) payments to managed care entities (MCEs), as opposed to utilization experience or actual claims paid by MCEs. As a result, enrollment is the primary driver of managed care variances. Overall managed care

expenditures are \$76.3M (0.6%) below the estimated amount in the April 2025 Medicaid forecast.

- SFY 2025 managed care expenditures YTD are \$2.7B (29.1%) above expenditures YTD in April 2024, driven primarily by the transition of members and related expenditures from the fee-for-service delivery system to the new Indiana PathWays for Aging managed care program. However, lower than forecasted enrollment in the PathWays program is resulting in a \$34.9M (1.0%) favorable variance in expenditures from the amount projected in the April 2025 Medicaid forecast.
- Favorable variance to forecast in SFY 2025 YTD for the Healthy Indiana Plan (HIP), is being driven by lower enrollment in the program YTD. The HIP program is predominately funded through an increased federal medical assistance percentage (FMAP), a portion of state cigarette tax revenue, and hospital assessment fees. As a result, these expenditures do not impact the State's general fund.
- Fee-for-service (FFS) expenditures reflect a favorable YTD variance to forecast of \$17.1M. Primary drivers include positive variances being seen in Home and Community Bases Waiver Services, and State Plan service expenditures. Nursing Facility YTD expenditures total \$457.6M, which is \$2.5M above the amount in the April 2025 Medicaid forecast.
- Effective July 1, 2024, the prior Aged & Disabled (A&D) Waiver transitioned into two separate waivers: the Health & Wellness (H&W) Waiver for individuals under age 60 and the Indiana PathWays for Aging (PathWays) Waiver for individuals aged 60 and older. Home and Community-Based Services (HCBS) expenditures for services under the Aged & Disabled (A&D) waiver provided before but paid after the July 1, 2024, transition continue to outpace forecast. HCBS Waiver services overall have a favorable variance to forecast of \$16.6M largely driven by the lower than forecasted expenditures under the H&W and CIH waiver.
- State Plan Services expenditures reflect a favorable variance to the forecast of \$2.4M with the main drivers being lower than forecasted high cost drugs and certified community behavioral health clinic cost, offset in part by higher than forecasted expenditures in hospital and physician services.
- Manual expenditures include supplemental payments paid to providers throughout the year but have a minimal impact on the State's general funds as the state share of these costs are paid through Intergovernmental Transfers (IGTs) or assessment fees. Higher than forecasted provider supplemental payments for Nursing Facility and FQHC/RHA supplemental payments are the primary drivers of the SFY2025 negative variance to forecasted expenditures.

- A positive variance to forecast in the Other Expenditures category is primarily driven by pharmacy rebate collections being higher than forecasted, which provides an offset for the cost of drugs provided to Medicaid recipients.
- Children Health Insurance Plan (CHIP) and Money Follows the Person (MFP) expenditures are not paid through the Medicaid Assistance fund and therefore are removed from the total expenditures reported. CHIP current monthly expenditures are showing as a credit due to the timing of expenditures adjustments.
- Overall, decreased SFY 2025 YTD expenditures compared to prior year expenditures are mainly driven by lower FFS expenditures and higher pharmacy rebate collections while offset partially by increased Managed Care expenditures.

Funding

- General fund usage year-to-date through April 2025 totaled \$3.7B, which represents approximately 22.5% of the overall funding for Medicaid Assistance expenditures while 69.3% comes from federal funds and 8.2% comes from Intergovernmental transfers and provider taxes.
- Through April 2025, the current SFY funding shortfall is estimated at \$239.6M. This shortfall is expected to fluctuate throughout the year based on the timing of funding and expenditures, particularly as it pertains to non-federal and non-state funds such as IGTs and assessment fees. Month-to-month changes are to be interpreted within the full fiscal year forecast.
