# Examples of reports, dashboards and raw data
Finding the right data in the right format

Reports

A static snapshot of data usually intended for a broader user audience. Run on a monthly, quarterly, or annual basis, reports often include analysis and contextual information that assists in the interpretation of the data.

Updated Monthly

High-level Analysis

Dashboards - An interactive visualization of data. Commonly updated on a more frequent basis than reports, dashboards are helpful for intermediate users who can perform simple filters and drill down to conduct basic analysis.

Custom Filtering

Interactive Mapping

Drill Down Analysis

Raw Data - A data file extracted directly from a source system. While it regularly requires additional cleaning, raw data is often necessary for matching and in-depth analysis.
