Enable & Empower Your Workplace with ArcGIS Indoors

Ethan Franklin - Esri
Andy Stewart - Esri

11:00 - 11:45 am

Bio:

Ethan Franklin - As a member of the ArcGIS Indoors Smart Cities team at Esri, I am passionate about bringing location analytics to the great indoors through operationalized workplace floorplans, and leverage real-time data to discover correlations between people, assets, and integrated systems.

Andy Stewart: As a Solutions Engineer on the ArcGIS Indoors Smart Cities team here at Esri, I am driven to enable others in using indoor mapping technology for creating a smarter, sustainable built-environment.

Abstract:

ArcGIS Indoors is a complete geo-enabled system for indoor mapping, space planning, and hoteling. It enables people in the workplace to share a common operating picture of their environment and visualize where resources need to be allocated to keep the organization running. ArcGIS Indoors also provides wayfinding, routing, and location sharing to everyone in the organization. Tune in to this presentation to learn about the full capabilities of ArcGIS Indoors and how you can implement it for your organization to increase productivity, drive organizational value and save time, effort, and money.
