

Appendix A

Connection to sewer: To protect public health, city sewer is always preferred. Whenever possible city sewer is the best option plus it increases property value.

Reconnection to OSS: The JCHD shall set parameters when a structure can be reconnected to an existing OSS. OSS's that are not functioning properly are a threat to public health.

Installer/Inspector registration: JCHD shall be informed of the installers operating in the county to better communicate with them and therefore better protect the public's health. Installers are registered so that a list of registered on-site sewage system (OSS) installers can be provided to the public as requested.

Installer/Inspector certification: JC OSS installers shall demonstrate minimum knowledge of septic rules to ensure the OSS is installed properly to protect the public's health.

Enforcement: The JCHD shall be able to enforce our ordinance and the States Rule when necessary. As well the installer shall have written instructions on how to appeal the Departments' decisions.

Holding tanks: SEA 414 requires each local jurisdiction to have an ordinance governing holding tanks.
